Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Dec 17, 2024	14 Days

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
G01	The LORs have been raised due to matrix interference
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q08	The matrix spike recovery is outside of the recommended acceptance criteria. An acceptable recovery was obtained for the laboratory control sample indicating a sample matrix interference.
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.

Eurofins, we have reviewed the results of 1168041;

1. Please conduct the following additional leachable concentration sampling (using TCLP method)
2. For all PAHs, please use 16 Congeners for TEQ calcs:

SAMPLE ID	Arsenic leachable concentration	Cadmium leachable concentration	Lead leachable concentration	Mercury leachable concentration	Zinc leachable concentration	All PAHs leachable concentration
Required LOR	0.5	0.1	0.5	0.01	0.01	0.0005 (TEQ)

Sample Receipt Advice

Company name: Aecom Aust Pty Ltd Tasmania
Contact name: Tim Martin
Project name: Macquarie Point
Project ID: 60693007 7
Turnaround time: 10 Day
Date/Time received Dec 17, 2024 4:32 PM
Eurofins reference 1172378

Sample Information

✓ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

✓ All samples have been received as described on the above COC.

✓ COC has been completed correctly.

✓ Attempt to chill was evident.

✓ Appropriately preserved sample containers have been used.

✓ All samples were received in good condition.

✓ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

✓ Appropriate sample containers have been used.

✓ Sample containers for volatile analysis received with zero headspace.

X Split sample sent to requested external lab.

X Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Notes

NO ANALYSIS SCHEDULED FOR M11_0.5

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Tim Martin - Timothy.Martin@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Global Leader - Results you can trust

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Polycyclic Aromatic Hydrocarbons (Trace level)	Melbourne	Dec 18, 2024	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water (trace)			
Heavy Metals	Melbourne	Dec 18, 2024	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Hi Tim,

We will get that organised.

@SH_AU_CAU001_EnviroSampleVic – Can you please action the below? Please note trace level leachate analysis is required. Thank you.

Kind Regards,

Savini Suduweli

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Tim Martin - Timothy.Martin@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Polycyclic Aromatic Hydrocarbons (Trace level)	Melbourne	Dec 31, 2024	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water (trace)			
Heavy Metals	Melbourne	Jan 07, 2025	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
C01	Leachate Fluid Key: 1 - pH 5.0; 2 - pH 2.9; 3 - pH 9.2; 4 - Reagent (DI) water; 5 - Client sample, 6 - other
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Polycyclic Aromatic Hydrocarbons (Trace level)	Melbourne	Dec 31, 2024	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water (trace)			
Heavy Metals	Melbourne	Jan 07, 2025	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Comments

Report 1173784-L-V2 (amendment to report 1173784-L) has been issued with corrected sample ID from JO8_1.5 to J08_1.5 for sample Ja003564.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
C01	Leachate Fluid Key: 1 - pH 5.0; 2 - pH 2.9; 3 - pH 9.2; 4 - Reagent (DI) water; 5 - Client sample, 6 - other
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Tim Martin - Timothy.Martin@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Global Leader - Results you can trust

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Polycyclic Aromatic Hydrocarbons (Trace level)	Melbourne	Dec 30, 2024	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water (trace)			
Heavy Metals	Melbourne	Dec 30, 2024	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Total Recoverable Hydrocarbons							
TRH C6-C9	mg/kg	< 20			20	Pass

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	N/A
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
R16	The LORs have been raised due to the high concentration of one or more analytes

Company name: Aecom Aust Pty Ltd Tasmania
Contact name: Robert Crowe
Project name: Macquarie Point
Project ID: 60693007 7
Turnaround time: 10 Day
Date/Time received Dec 23, 2024 8:01 PM
Eurofins reference 1174347

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

QC185 & QC186 unable to analyse
Samples received by the laboratory after 5.30pm are deemed to have been received the following working day.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Robert Crowe - Robert.Crowe@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Aecom Aust Pty Ltd Tasmania
Suite 6, Level 3,13-17 Castray Esplanade
Hobart
Tasmania 7000

NATA Accredited
Accreditation Number 1261
Site Number 1254

Accredited for compliance with ISO/IEC 17025 – Testing
NATA is a signatory to the ILAC Mutual Recognition Arrangement for the mutual recognition of the equivalence of testing, medical testing, calibration, inspection, proficiency testing scheme providers and reference materials producers reports and certificates.

Attention: **Robert Crowe**

Report **1174347-L**
Project name Macquarie Point
Project ID 60693007 7
Received Date Dec 23, 2024

Client Sample ID			**E13_1.5**	**QC171**	**F13_0.5**	**F13_1.0**

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Polycyclic Aromatic Hydrocarbons (Trace level)	Melbourne	Dec 31, 2024	7 Days

- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water (trace)

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Qualifier Codes/Comments

Code	Description
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.

Hi Tim,

We will get that organised.

@SH_AU_CAU001_EnviroSampleVic – Can you please action the below? Please note trace level leachate analysis is required. Thank you.

Kind Regards,

Savini Suduweli

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Tim Martin - Timothy.Martin@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Polycyclic Aromatic Hydrocarbons (Trace level)

Savini

u please review 1171417, it seems the 4 samples were not taken off hold as requested and d as requested, per below email (17 dec).
actioned, please send through updated COA and Summary docs.
not, please advise if this can be actioned?

s,
Y MARTIN

RE: Eurofins Sample Receipt Advice - Report 1171417 : Site Macquarie Point (60693007 7)

Savini,

on to Supriya's request below, can you please action the following:

- QC198: for TRH/BTEXN, PAHs (trace level), Lead, Arsenic
- E16_1.0: for TRH/BTEXN, PAHs (trace level), Lead, Arsenic
- H07_2.0: for TRH/BTEXN, PAHs (trace level), Lead, Arsenic
- H07_3.0: for IB105 suite

- Update Sample IDs (insert 0 into sample IDs where <10):

#	Current Sample ID	Updated Sample ID
15	K6_0.5	K06_0.5
16	K6_1.0	K06_1.0
17	K6_1.5	K06_1.5
18	K6_2.0	K06_2.0
19	K6_2.5	K06_2.5
21	J7_0.5	J07_0.5
22	J7_1.0	J07_1.0
23	J7_1.5	J07_1.5
24	J7_2.0	J07_2.0
25	J7_2.5	J07_2.5
26	J6_0.5	J06_0.5
27	J6_1.0	J06_1.0
28	J6_1.5	J06_1.5
29	J6_2.0	J06_2.0
30	J6_2.5	J06_2.5
31	I6_0.5	I06_0.5

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Tim Martin - Timothy.Martin@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Hi Tim,

Apologies for the error, we will get those additional samples logged as well for TCLP Lead,

Hi SR, could you please help add to 1178592, thank you! 😊

Additional TCLP Leachability (Lead):

- Note that I've just send an email re: incorrect sample IDs for **M24-De0037998 to M24-De0038001** (should be I06_x.x instead of I16_x.x)
- I've provided the Lab sample # for those 2 samples I want lead leachability done, to avoid confusion.

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
N/A	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Tim Martin - Timothy.Martin@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Heavy Metals	Melbourne	Jan 23, 2025	28 Days

- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

Re: Additional leachable concentration sampling request, Lead;

Verified Sender: This email is from an internal and/or verified domain which passed security verifications. Remember to still be cautious with personal data and follow company policies.

Hi Harry,

Can you please ensure that the two highlighted samples are logged in today on a 1 day TAT? Thanks.

Kind Regards,

Savini Suduweli

Thanks Savini,

Can you please investigate:

- There seems to be 59 samples in the COA, and only 58 tested for leachability of lead using TCLP:
- M13_1.5 – it seems it was not tested for leachability of lead?
- J06_1.5 and M13_1.0 were not re-tested for lead leachability as requested (not on summary or in COA)

#11 30/01/2025

Please refer to the attached email for reference, and advise if this can be addressed urgently.

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

Savini Suduweli on phone : +61 3 8564 5051 or by email: Savini.Suduwelikondage@eurofinsanz.com

Results will be delivered electronically via email to Tim Martin - Timothy.Martin@aecom.com.

Note: A copy of these results will also be delivered to the general Aecom Aust Pty Ltd Tasmania email address.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follow guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013. They are included in this QC report where applicable. Additional QC data may be available on request.
2. Unless otherwise stated, all soil/sediment/solid results are reported on a dry weight basis.
3. Unless otherwise stated, all biota/food results are reported on a wet weight basis on the edible portion.
4. For CEC results where the sample's origin is unknown or environmentally contaminated, the results should be used advisedly.
5. Actual LORs are matrix dependent. Quoted LORs may be raised where sample extracts are diluted due to interferences.
6. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds where annotated.
7. SVOC analysis on waters is performed on homogenised, unfiltered samples unless noted otherwise.
8. Samples were analysed on an 'as received' basis.
9. Information identified in this report with **blue** colour indicates data provided by customers that may have an impact on the results.
10. This report replaces any interim results previously issued.

Holding Times

Please refer to the 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours before sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and despite any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the sampling date; therefore, compliance with these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether, the holding time is seven days; however, for all other VOCs, such as BTEX or C6-10 TRH, the holding time is 14 days.

Units

mg/kg: milligrams per kilogram	**mg/L:** milligrams per litre	**ppm:** parts per million
µg/L: micrograms per litre	**ppb:** parts per billion	**%:** Percentage
org/100 mL: Organisms per 100 millilitres	**NTU:** Nephelometric Turbidity Units	**MPN/100 mL:** Most Probable Number of organisms per 100 millilitres
CFU: Colony Forming Unit	**Colour:** Pt-Co Units (CU)	

Terms

APHA	American Public Health Association
CEC	Cation Exchange Capacity
COC	Chain of Custody
CP	Client Parent - QC was performed on samples pertaining to this report
CRM	Certified Reference Material (ISO17034) - reported as percent recovery.
Dry	Where moisture has been determined on a solid sample, the result is expressed on a dry weight basis.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
LOR	Limit of Reporting.
LCS	Laboratory Control Sample - reported as percent recovery.
Method Blank	In the case of solid samples, these are performed on laboratory-certified clean sands and in the case of water samples, these are performed on de-ionised water.
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC represents the sequence or batch that client samples were analysed within.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
SRA	Sample Receipt Advice
Surr - Surrogate	The addition of a similar compound to the analyte target is reported as percentage recovery. See below for acceptance criteria.
TBTO	Tributyltin oxide (*bis*-tributyltin oxide) - individual tributyltin compounds cannot be identified separately in the environment; however, free tributyltin was measured, and its values were converted stoichiometrically into tributyltin oxide for comparison with regulatory limits.
TCLP	Toxicity Characteristic Leaching Procedure
TEQ	Toxic Equivalency Quotient or Total Equivalence
QSM	US Department of Defense Quality Systems Manual Version 6.0
US EPA	United States Environmental Protection Agency
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should only be used as a guide and may be different when site-specific Sampling Analysis and Quality Plan (SAQP) have been implemented.

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is ≤30%; however, the following acceptance guidelines are equally applicable:

Results <10 times the LOR:	No Limit
Results between 10-20 times the LOR:	RPD must lie between 0-50%
Results >20 times the LOR:	RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range, not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS. SVOCs recoveries 20 – 150%, VOC recoveries 50 – 150%

PFAS field samples containing surrogate recoveries above the QC limit designated in QSM 6.0, where no positive PFAS results have been reported or reviewed, and no data was affected.

QC Data General Comments

1. Where a result is reported as less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown are not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery, the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results, a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data; thus, it is possible to have two sets of data.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EG005(ED093)T: Total Metals by ICP-AES	EM2420318--003	Anonymous	**Arsenic**	7440-38-2	57.7 %	78.0-124%	**Recovery less than lower data quality objective**

Outliers : Frequency of Quality Control Samples

Semivolatile Compounds by GCMS(SIM - Ultra-trace)	EP132	0	2	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Semivolatile Compounds by GCMS(SIM - Ultra-trace)	EP132	SOIL	In house: Referenced to USEPA 8270 GCMS Capiliary column, SIM mode.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids/ Acetylation	ORG17A-AC	SOIL	In house: Mechanical agitation (tumbler). 20g of sample, Na2SO4 and surrogate are extracted with 150mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to 1 mL with exchange into cyclohexane. Phenolic compounds are reacted with acetic anhydride to yield phenyl acetates suitable for ultra-trace analysis.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EG005-T : EM2420318 #3 Poor matrix spike recovery for total arsenic due to sample matrix. Confirmed by re-digestion and re-analysis.
- EP132: Particular samples required dilution due to the presence of high level contaminants. LOR values have been adjusted accordingly.
- EP132: Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

Receipt Detail	:	No. of samples received / analysed	: 2 / 2

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Preliminary results will be available on the scheduled reporting date listed in this report. However the final report with Ultratrace PAH's analysis will be complete on 12/12/24.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2421657**	Page	: 1 of 8
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Telephone	: +6138549 9645
Project	: 60693007 7	Date Samples Received	: 06-Dec-2024
Site	: Macquaire Point	Issue Date	: 18-Dec-2024
Sampler	: AC, JM, TG	No. of samples received	: 3
Order number	: 60693007 7	No. of samples analysed	: 3

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EK040T-P: Total Fluoride by Auto Analyser	EM2421389--013	Anonymous	**Fluoride**	16984-48-8	66.6 %	70.0-130%	**Recovery less than lower data quality objective**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Hexavalent Chromium by Alkaline Digestion and DA Finish	EG048G	SOIL	In house: Referenced to USEPA SW846, Method 3060. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM Schedule B(3)
Total Cyanide by Segmented Flow Analyser	EK026SF	SOIL	In house: Referenced to APHA 4500-CN C / ASTM D7511 / ISO 14403. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM Schedule B(3).
Total Fluoride by Auto Analyser	EK040T-P	SOIL	In-house: Total fluoride is determined by an auto analyer ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	SOIL	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
Benzo(a)pyrene and other PAHs - Waste Classification (TAS requirements)	EP075-TAS	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.

Preparation Methods	Method	Matrix	Method Descriptions
NaOH leach for CN in Soils	CN-PR	SOIL	In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.
Alkaline digestion for Hexavalent Chromium	EG048PR	SOIL	In house: Referenced to USEPA SW846, Method 3060A.
Total Fluoride	EK040T-PR	SOIL	In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.
TCLP for Non & Semivolatile Analytes - Glass Leaching Vessel	EN33a-G	SOIL	In house QWI-EN/33 referenced to USEPA SW846-1311: The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Separatory Funnel Extraction of Liquids	ORG14	SOIL	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids - VIC EPA Screen	ORG17-EM	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

General Comments

This guideline comparison report **only** provides comparison of reported result against limit thresholds for the 'Fill Material', 'Low Level Contaminated Soil', and 'Contaminated Soil' categories in Table 2 of EPA Tasmania Information Bulletin No. 105.
This guideline comparison report is **NOT** a compliance report. Classification of soils requires consideration of a number of other factors including preliminary site investigation, sampling density and statistical calculations and measurement uncertainty.
This guideline comparison report only provides comparison data for parameters, specifically listed within Table2 of the EPA Tasmania Information Bulletin No. 105, that are analysed by ALS.
Only results in the 'Analytical Results' section have been compared to the guideline.

Additional information pertinent to this report will be found in the following separate attachments: Certificate of Analysis, Quality Control Report, QA/QC Compliance Assessment to Assist with Quality Review and Sample Receipt Notification.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Dilani Fernando	Laboratory Coordinator	Melbourne Inorganics, Springvale, VIC
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Organics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG048G: EM2421520 #24 Poor matrix spike recovery for Hexavalent Chromium due to sample matrix interferences. Confirmed by re-analysis.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EK040T: EM2421389 #13 Poor matrix spike recovery for total fluoride due to sample matrix. Confirmed by re-extraction and re-analysis.
- EK040T-P: EM2421389 #13, Poor matrix spike recovery for total fluoride due to matrix effects.

Peter,

Just as an FYI, we've been forwarding samples from Eurofins for lab analysis, from our job down in Hobart.

- I'm aware that these samples are taking some time to reach ALS.
- To date, I've only seen SRNs for 7 of my 29 soil samples being sent your way.

As a reference; please see below regarding anticipated samples heading your way, and the anticipated sample analysis to be conducted.

- Any issues or clarifications, please don't hesitate to call me... just trying to make it as efficient for you as possible.
- As soon as COAs come in, I will endeavour to provide any follow-up TCLP leachable analysis.

	Sample ID	Initial Analysis Request	Received by ALS?	Additional TCLP Leachable sampling required? (all PAHs and TEQ results)?
	QC103	CoPCs: Metals, TPH+BTEXN, all PAHs (trace level) with B(a)P TEQs	EM2421016	Yes
	QC108	CoPCs: Metals, TPH+BTEXN, all PAHs (trace level) with B(a)P TEQs	EM2421016	-
	QC116	IB105: SOIL - P-20/1	EM2421150	Yes
	QC120	CoPCs: Metals, TPH+BTEXN, all PAHs (trace level) with B(a)P TEQs	EM2421150	-
	QC124	CoPCs: Metals, TPH+BTEXN, all PAHs (trace level) with B(a)P TEQs	EM24211657	TBA, awaiting COA
	QC128	IB105: SOIL - P-20/1	EM24211657	TBA, awaiting COA
	QC132	CoPCs: Metals, TPH+BTEXN, all PAHs (trace level) with B(a)P TEQs	EM24211657	TBA, awaiting COA

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2421846**	Page	: 1 of 8
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Telephone	: +6138549 9645
Project	: 60693007 7	Date Samples Received	: 10-Dec-2024
Site	: Macquarie Point	Issue Date	: 19-Dec-2024
Sampler	: AC, JM, TG	No. of samples received	: 4
Order number	: 60693007 7	No. of samples analysed	: 4

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Matrix Spike (MS) Recoveries							
EG048: Hexavalent Chromium (Alkaline Digest)	EM2421824--002	Anonymous	**Hexavalent Chromium**	18540-29-9	43.7 %	58.0-114%	**Recovery less than lower data quality objective**

Outliers : Frequency of Quality Control Samples

Matrix: **SOIL**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Matrix Spikes (MS)						
PAH/Phenols (SIM)	EP075(SIM)	0	1	0.00	5.00	NEPM 2013 B3 & ALS QC Standard
Pesticides by GCMS	EP068	0	1	0.00	5.00	NEPM 2013 B3 & ALS QC Standard
Polychlorinated Biphenyls (PCB)	EP066	0	1	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Hexavalent Chromium by Alkaline Digestion and DA Finish	EG048G	SOIL	In house: Referenced to USEPA SW846, Method 3060. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM Schedule B(3)
Total Cyanide by Segmented Flow Analyser	EK026SF	SOIL	In house: Referenced to APHA 4500-CN C / ASTM D7511 / ISO 14403. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM Schedule B(3).
Total Fluoride by Auto Analyser	EK040T-P	SOIL	In-house: Total fluoride is determined by an auto analyer ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Benzo(a)pyrene and other PAHs - Waste Classification (TAS requirements)	EP075-TAS	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.

Preparation Methods	Method	Matrix	Method Descriptions
NaOH leach for CN in Soils	CN-PR	SOIL	In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.
Alkaline digestion for Hexavalent Chromium	EG048PR	SOIL	In house: Referenced to USEPA SW846, Method 3060A.
Total Fluoride	EK040T-PR	SOIL	In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids - VIC EPA Screen	ORG17-EM	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

QUALITY CONTROL REPORT

Work Order	: **EM2421846**	Page	: 1 of 11
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne

Project	: 60693007 7	Date Samples Received	: 10-Dec-2024
Order number	: 60693007 7	Date Analysis Commenced	: 17-Dec-2024
C-O-C number	: ----	Issue Date	: 19-Dec-2024
Sampler	: AC, JM, TG		
Site	: Macquarie Point		
Quote number	: EN/004/23		
No. of samples received	: 4		
No. of samples analysed	: 4		

Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

No. of samples analysed	: 4	Quote number	: EN/004/23

General Comments

This guideline comparison report **only** provides comparison of reported result against limit thresholds for the 'Fill Material', 'Low Level Contaminated Soil', and 'Contaminated Soil' categories in Table 2 of EPA Tasmania Information Bulletin No. 105.

This guideline comparison report is **NOT** a compliance report. Classification of soils requires consideration of a number of other factors including preliminary site investigation, sampling density and statistical calculations and measurement uncertainty.

This guideline comparison report only provides comparison data for parameters, specifically listed within Table2 of the EPA Tasmania Information Bulletin No. 105, that are analysed by ALS.

Only results in the 'Analytical Results' section have been compared to the guideline.

Additional information pertinent to this report will be found in the following separate attachments: Certificate of Analysis, Quality Control Report, QA/QC Compliance Assessment to Assist with Quality Review and Sample Receipt Notification.

CERTIFICATE OF ANALYSIS

Work Order	: **EM2421846**	Page	: 1 of 9
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Contact	: Peter Ravlic
Address	: SUITE 6 13-17 CASTRAY ESPLANADE HOBART 7004	Address	: 4 Westall Rd Springvale VIC Australia 3171
Telephone	: 03 9653 1234	Telephone	: +6138549 9645
Project	: 60693007 7	Date Samples Received	: 10-Dec-2024 11:15
Order number	: 60693007 7	Date Analysis Commenced	: 17-Dec-2024
C-O-C number	: ----	Issue Date	: 19-Dec-2024 16:33
Sampler	: AC, JM, TG		
Site	: Macquarie Point		
Quote number	: EN/004/23		
No. of samples received	: 4		
No. of samples analysed	: 4		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG048G: EM2421824 #2, Poor insoluble matrix spike recovery for Hexavalent Chromium due to sample matrix interferences. Confirmed by re-extraction and re-analysis.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.

Peter,

Can you please complete additional sampling of QC103 for leachable concentrations for B(a)P and Total PAHs.
We require trace-level LOR of 0.0005 mg/L for assessment against IB105 criteria.

Kind Regards,

TIMOTHY MARTIN

Subject: RESULTS for ALS Workorder : EM2421016 | Your Reference: 60693007

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2421847**	Page	: 1 of 4
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Telephone	: +6138549 9645
Project	: 60693007	Date Samples Received	: 29-Nov-2024
Site	: Macquarie Point	Issue Date	: 17-Dec-2024
Sampler	: Andrew Christensen, JACOB MULLER, TAYA GERSTEL	No. of samples received	: 1
Order number	: 60693007 7	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

Matrix: **SOIL**

Method / Container / Client Sample ID(s)	Extraction / Preparation			Analysis		
	Date extracted	Due for extraction	Days overdue	Date analysed	Due for analysis	Days overdue
EN33: TCLP Leach - Inorganics/Non-Volatile Organics (Glass Vessel)						
Non-Volatile Leach: 14 day HT(e.g. SV organics)						
QC103	13-Dec-2024	09-Dec-2024	**4**	----	----	----

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Matrix Spikes (MS)						
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	1	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	SOIL	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
TCLP for Non & Semivolatile Analytes - Glass Leaching Vessel	EN33a-G	SOIL	In house QWI-EN/33 referenced to USEPA SW846-1311: The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.
Separatory Funnel Extraction of Liquids	ORG14	SOIL	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Tahlia Freeman	Instrument Operator	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- This is a rebatch of EM2421016.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

Order number	: 60693007 7	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

Matrix: **SOIL**

Method / Container / Client Sample ID(s)	Extraction / Preparation			Analysis		
	Date extracted	Due for extraction	Days overdue	Date analysed	Due for analysis	Days overdue
EN33: TCLP Leach - Inorganics/Non-Volatile Organics (Glass Vessel)						
Non-Volatile Leach: 14 day HT(e.g. SV organics)						
QC116	16-Dec-2024	11-Dec-2024	**5**	----	----	----

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Matrix Spikes (MS)						
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	2	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
EN33: TCLP Leach - Inorganics/Non-Volatile Organics (Glass Vessel)							
Non-Volatile Leach: 14 day HT(e.g. SV organics) (EN33a-G)							
QC116	**27-Nov-2024**	**16-Dec-2024**	11-Dec-2024	×	**----**	----	----

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons							
Amber Glass Bottle - Unpreserved (EP075(SIM)B-LL)

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	1	2	**50.00**	**10.00**	✓	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	1	2	**50.00**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard

PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	1	2	**50.00**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	2	**0.00**	**5.00**	×	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	SOIL	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
TCLP for Non & Semivolatile Analytes - Glass Leaching Vessel	EN33a-G	SOIL	In house QWI-EN/33 referenced to USEPA SW846-1311: The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.
Separatory Funnel Extraction of Liquids	ORG14	SOIL	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.

REBATCH REQUEST

Workorder / Client code / Project:	ALS Workorder EM2421150, Client AECOMAU, Project 60693007 7		**CS Contact: Peter Ravlic**
Project Manager:	***Please include this rebatch PM plus all report recipients as per original workorder***		Additional Information:
Date samples rec'd:	2/12/2024 11:27am		
Date Instructions rec'd:	12/12/2924 11:07am		
Rebatch due date:	Thursday, 19 December 2024	FTAT approved?	
Due date surcharge:	**N/A**

CAUTION: This email originated from outside of ALS. Do not click links or open attachments unless you recognize the sender and are sure content is relevant to you.

Peter,

Can you please conduct the following additional sampling on QC116, similar to my request for QC103 (EM2421016):

- All PAHs leachable concentration (trace level, via TCLP) and TEQ results using 16 Congeners.

Regards,

TIMOTHY MARTIN

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Dilani Fernando	Laboratory Coordinator	Melbourne Inorganics, Springvale, VIC
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EG005-T : EM2422281 #3 Poor duplicate precision for total metals due to sample matrix. Confirmed by re-digestion and re-analysis.
- EP075-TAS: EM2422260_003 Poor duplicate precision due to sample heterogeneity. Confirmed by re-extraction and re-analysis.
- EP068: EM2422180_001 Higher matrix spike recovery due to matrix effects.
- EG048G: EM2421996 #46, Poor matrix spike recovery for hexavalent chromium (soluble and insoluble) due to matrix effects.
- EP068: EM2422180_001 Unable to determine Aldrin recovery due to matrix interference.
- EK040T-P: EM2422180 #1, Poor matrix spike recovery for Total Fluoride due to matrix effects.

General Comments

This guideline comparison report **only** provides comparison of reported result against limit thresholds for the 'Fill Material', 'Low Level Contaminated Soil', and 'Contaminated Soil' categories in Table 2 of EPA Tasmania Information Bulletin No. 105.
This guideline comparison report is **NOT** a compliance report. Classification of soils requires consideration of a number of other factors including preliminary site investigation, sampling density and statistical calculations and measurement uncertainty.
This guideline comparison report only provides comparison data for parameters, specifically listed within Table2 of the EPA Tasmania Information Bulletin No. 105, that are analysed by ALS.
Only results in the 'Analytical Results' section have been compared to the guideline.

Additional information pertinent to this report will be found in the following separate attachments: Certificate of Analysis, Quality Control Report, QA/QC Compliance Assessment to Assist with Quality Review and Sample Receipt Notification.

QUALITY CONTROL REPORT

Work Order	: **EM2422180**	Page	: 1 of 11
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR TIMOTHY MARTIN	Contact	: Peter Ravlic
Address	: COLLINS SQUARE LEVEL 10, TOWER TWO 727 COLLINS STREET MELBOURNE VIC, AUSTRALIA 3004	Address	: 4 Westall Rd Springvale VIC Australia 3171
Telephone	: +61 03 9653 1234	Telephone	: +6138549 9645
Project	: Soil Samples	Date Samples Received	: 15-Dec-2024
Order number	: Macquarie Point 60693007 7	Date Analysis Commenced	: 18-Dec-2024
C-O-C number	: ----	Issue Date	: 23-Dec-2024
Sampler	: ----		
Site	: ----		
Quote number	: EN/004/23		
No. of samples received	: 1		
No. of samples analysed	: 1		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Dilani Fernando	Laboratory Coordinator	Melbourne Inorganics, Springvale, VIC
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Hexavalent Chromium by Alkaline Digestion and DA Finish	EG048G	SOIL	In house: Referenced to USEPA SW846, Method 3060. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM Schedule B(3)
Total Cyanide by Segmented Flow Analyser	EK026SF	SOIL	In house: Referenced to APHA 4500-CN C / ASTM D7511 / ISO 14403. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM Schedule B(3).
Total Fluoride by Auto Analyser	EK040T-P	SOIL	In-house: Total fluoride is determined by an auto analyer ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Benzo(a)pyrene and other PAHs - Waste Classification (TAS requirements)	EP075-TAS	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.

Preparation Methods	Method	Matrix	Method Descriptions
NaOH leach for CN in Soils	CN-PR	SOIL	In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.
Alkaline digestion for Hexavalent Chromium	EG048PR	SOIL	In house: Referenced to USEPA SW846, Method 3060A.
Total Fluoride	EK040T-PR	SOIL	In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids - VIC EPA Screen	ORG17-EM	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please be advised, that no analysis has been requested on the provided Chain of Custody (COC). The ANALYSIS-TBA task has been logged as a place holder until analysis instructions have been supplied by the client. Standard disposal timeframes apply from receipt of samples. Administrative fee plus applicable freight fees will be charged on the shown due date. If you would like to discuss this please contact Client Services.**
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Sheridan

Thanks for taking my call regarding the missing samples; as discussed I've put some notes below – but hoping you can confirm those highlighted below were actually received (as they are listed in the summary PDF).
So other notes to update for SRN 1169377.

Sample Date:

- All samples dates are listed as 4 December; this is incorrect and should be updated per the COC provided.
- Samples range from 4 Dec to 6 Dec.

Extra Samples:

- QC147: IB105 suite
- QC148: Please forward to ALS

6/12

No. of coolers/boxes	: 3	Temperature	: 11.2°C - Ice Bricks present
Receipt Detail	:	No. of samples received / analysed	: 11 / 11

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2422260**	Page	: 1 of 9
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Telephone	: +6138549 9645
Project	: 60693007 7	Date Samples Received	: 13-Dec-2024
Site	: Macquarie Point	Issue Date	: 23-Dec-2024
Sampler	: AC, JM, TG	No. of samples received	: 11
Order number	: 60693007 7	No. of samples analysed	: 11

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment

Matrix Spikes (MS)						
Total Fluoride by Auto Analyser	EK040T-P	1	21	4.76	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method	***Sample Date***	*Extraction / Preparation*			*Analysis*		
Container / *Client Sample ID(s)*		***Date extracted***	*Due for extraction*	*Evaluation*	***Date analysed***	*Due for analysis*	*Evaluation*

Matrix: **SOIL**

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Hexavalent Chromium by Alkaline Digestion and DA Finish	EG048G	SOIL	In house: Referenced to USEPA SW846, Method 3060. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM Schedule B(3)
Total Cyanide by Segmented Flow Analyser	EK026SF	SOIL	In house: Referenced to APHA 4500-CN C / ASTM D7511 / ISO 14403. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM Schedule B(3).
Total Fluoride by Auto Analyser	EK040T-P	SOIL	In-house: Total fluoride is determined by an auto analyer ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Benzo(a)pyrene and other PAHs - Waste Classification (TAS requirements)	EP075-TAS	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.

Preparation Methods	Method	Matrix	Method Descriptions
NaOH leach for CN in Soils	CN-PR	SOIL	In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.
Alkaline digestion for Hexavalent Chromium	EG048PR	SOIL	In house: Referenced to USEPA SW846, Method 3060A.
Total Fluoride	EK040T-PR	SOIL	In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids - VIC EPA Screen	ORG17-EM	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

General Comments

This guideline comparison report **only** provides comparison of reported result against limit thresholds for the 'Fill Material', 'Low Level Contaminated Soil', and 'Contaminated Soil' categories in Table 2 of EPA Tasmania Information Bulletin No. 105.

This guideline comparison report is **NOT** a compliance report. Classification of soils requires consideration of a number of other factors including preliminary site investigation, sampling density and statistical calculations and measurement uncertainty.

This guideline comparison report only provides comparison data for parameters, specifically listed within Table2 of the EPA Tasmania Information Bulletin No. 105, that are analysed by ALS.

Only results in the 'Analytical Results' section have been compared to the guideline.

Additional information pertinent to this report will be found in the following separate attachments: Certificate of Analysis, Quality Control Report, QA/QC Compliance Assessment to Assist with Quality Review and Sample Receipt Notification.

Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG048G: EM2422260 #5, Sample required dilution prior to Hexavalent Chromium analysis due to matrix interferences. LOR value has been adjusted accordingly.
- EG048G: EM2422260 #5, Poor matrix spike recovery for Hexavalent Chromium due to sample matrix interferences. Confirmed by re-analysis.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EG005-T : EM2422322 #1 Poor duplicate precision for total metals due to sample matrix. Confirmed by re-digestion and re-analysis.
- EP068: Particular sample EM2422260_005 required dilution prior to analysis due to matrix interferences. LOR values have been adjusted accordingly.
- EP075-TAS: EM2422260_003 Poor duplicate precision due to sample heterogeneity. Confirmed by re-extraction and re-analysis.
- EP075SIM: EM2422260_005 Poor matrix spike recovery due to matrix effects.
- EK040T-P: EM2422180 #1, Poor matrix spike recovery for Total Fluoride due to matrix effects.

Peter,

Just as an FYI, we've been forwarding samples from Eurofins for lab analysis, from our job down in Hobart.

- I'm aware that these samples are taking some time to reach ALS.
- To date, I've only seen SRNs for 7 of my 29 soil samples being sent your way.

As a reference; please see below regarding anticipated samples heading your way, and the anticipated sample analysis to be conducted.

- Any issues or clarifications, please don't hesitate to call me... just trying to make it as efficient for you as possible.
- As soon as COAs come in, I will endeavour to provide any follow-up TCLP leachable analysis.

Sample ID	Initial Analysis Request	Received by ALS?	Additional TCLP Leachable sampling required? (all PAHs and TEQ results)?
QC103	CoPCs: Metals, TPH+BTEXN, all PAHs (trace level) with B(a)P TEQs	EM2421016	Yes
QC108	CoPCs: Metals, TPH+BTEXN, all PAHs (trace level) with B(a)P TEQs	EM2421016	-

Dates

Date Samples Received	: 16-Dec-2024 11:46	Issue Date	: 17-Dec-2024
Client Requested Due Date	: 23-Dec-2024	Scheduled Reporting Date	: **23-Dec-2024**

Delivery Details

Mode of Delivery	: Carrier	Security Seal	: Intact.
No. of coolers/boxes	: 3	Temperature	: 20.1°C - Ice Bricks present
Receipt Detail	:	No. of samples received / analysed	: 5 / 5

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2422322**	Page	: 1 of 8
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Telephone	: +6138549 9645
Project	: 60693007	Date Samples Received	: 16-Dec-2024
Site	: Macquarie Point	Issue Date	: 23-Dec-2024
Sampler	: Andrew Christensen, JACOB MULLER, TAYA GERSTEL	No. of samples received	: 5
Order number	: 60693007 7	No. of samples analysed	: 5

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Laboratory Control outliers occur.**
- **Duplicate outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Hexavalent Chromium by Alkaline Digestion and DA Finish	EG048G	SOIL	In house: Referenced to USEPA SW846, Method 3060. Hexavalent chromium is extracted by alkaline digestion. The digest is determined by photometrically by automatic discrete analyser, following pH adjustment. The instrument uses colour development using dephenylcarbazide. Each run of samples is measured against a five-point calibration curve. This method is compliant with NEPM Schedule B(3)
Total Cyanide by Segmented Flow Analyser	EK026SF	SOIL	In house: Referenced to APHA 4500-CN C / ASTM D7511 / ISO 14403. Caustic leachates of soil samples are introduced into an automated segmented flow analyser. Complex bound cyanide is decomposed in a continuously flowing stream, at a pH of 3.8, by the effect of UV light. A UV-B lamp (312 nm) and a decomposition spiral of borosilicate glass are used to filter out UV light with a wavelength of less than 290 nm thus preventing the conversion of thiocyanate into cyanide. The hydrogen cyanide present at a pH of 3.8 is separated by gas dialysis. The hydrogen cyanide is then determined photometrically, based on the reaction of cyanide with chloramine-T to form cyanogen chloride. This then reacts with 4-pyridine carboxylic acid and 1,3-dimethylbarbituric acid to give a red colour which is measured at 600 nm. This method is compliant with NEPM Schedule B(3).
Total Fluoride by Auto Analyser	EK040T-P	SOIL	In-house: Total fluoride is determined by an auto analyer ion specific electrode (ISE) in a solution obtained after a Sodium Carbonate / Potassium Carbonate fusion dissolution.
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Benzo(a)pyrene and other PAHs - Waste Classification (TAS requirements)	EP075-TAS	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.

Preparation Methods	Method	Matrix	Method Descriptions
NaOH leach for CN in Soils	CN-PR	SOIL	In house: APHA 4500 CN. Samples are extracted by end-over-end tumbling with NaOH.
Alkaline digestion for Hexavalent Chromium	EG048PR	SOIL	In house: Referenced to USEPA SW846, Method 3060A.
Total Fluoride	EK040T-PR	SOIL	In house: Samples are fused with Sodium Carbonate / Potassium Carbonate flux.
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids - VIC EPA Screen	ORG17-EM	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

General Comments

This guideline comparison report **only** provides comparison of reported result against limit thresholds for the 'Fill Material', 'Low Level Contaminated Soil', and 'Contaminated Soil' categories in Table 2 of EPA Tasmania Information Bulletin No. 105.
This guideline comparison report is **NOT** a compliance report. Classification of soils requires consideration of a number of other factors including preliminary site investigation, sampling density and statistical calculations and measurement uncertainty.
This guideline comparison report only provides comparison data for parameters, specifically listed within Table2 of the EPA Tasmania Information Bulletin No. 105, that are analysed by ALS.
Only results in the 'Analytical Results' section have been compared to the guideline.

Additional information pertinent to this report will be found in the following separate attachments: Certificate of Analysis, Quality Control Report, QA/QC Compliance Assessment to Assist with Quality Review and Sample Receipt Notification.

Order number	: 60693007 7	Date Analysis Commenced	: 18-Dec-2024
C-O-C number	: ----	Issue Date	: 23-Dec-2024 16:38
Sampler	: Andrew Christensen, JACOB MULLER, TAYA GERSTEL		
Site	: Macquarie Point		
Quote number	: EN/004/23		
No. of samples received	: 5		
No. of samples analysed	: 5		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Nancy Wang	2IC Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EG048G: EM2422260 #5, Poor matrix spike recovery for Hexavalent Chromium due to sample matrix interferences. Confirmed by re-analysis.
- EG048G: EM2422349 #1 poor matrix spike recovery for Hexavalent Chromium due to matrix effects. Confirmed by re-preparation and re-analysis.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EG005-T : EM2422322 #1 Poor duplicate precision for total metals due to sample matrix. Confirmed by re-digestion and re-analysis.
- EK040T-P : EM2422289-004 Poor matrix spike recovery for Total Fluoride due to matrix effects.
- EK040T-P: EM242289 #4, Poor matrix spike recovery for Total Fluoride due to matrix effects.

Peter,

Please conduct additional analysis for leachable PAH (via method EP075(SIM)B-LL using TCLP) for QC144 and QC152, from batch EM2421846.

Regards, Tim

No. of coolers/boxes	: ----	Temperature	: ----
Receipt Detail	:	No. of samples received / analysed	: 2 / 2

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- This is a rebatch of EM2421846.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2422444**	Page	: 1 of 4
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Telephone	: +6138549 9645
Project	: 60693007 7	Date Samples Received	: 10-Dec-2024
Site	: Macquarie Point	Issue Date	: 27-Dec-2024
Sampler	: AC, JM, TG	No. of samples received	: 2
Order number	: 60693007 7	No. of samples analysed	: 2

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Laboratory Duplicates (DUP)						
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	2	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)						
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	2	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
EN33: TCLP Leach - Inorganics/Non-Volatile Organics (Glass Vessel)							
Non-Volatile Leach: 14 day HT(e.g. SV organics) (EN33a-G)							
QC144, QC152	**06-Dec-2024**	**20-Dec-2024**	20-Dec-2024	✓	**----**	----	----

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation
EP075(SIM)B: Polynuclear Aromatic Hydrocarbons							
Amber Glass Bottle - Unpreserved (EP075(SIM)B-LL)							
QC144, QC152	**20-Dec-2024**	**23-Dec-2024**	27-Dec-2024	✓	**23-Dec-2024**	01-Feb-2025	✓

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	2	**0.00**	**10.00**	×	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	1	2	**50.00**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	1	2	**50.00**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	2	**0.00**	**5.00**	×	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	SOIL	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
TCLP for Non & Semivolatile Analytes - Glass Leaching Vessel	EN33a-G	SOIL	In house QWI-EN/33 referenced to USEPA SW846-1311: The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.
Separatory Funnel Extraction of Liquids	ORG14	SOIL	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.

Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report			
					Spike	Spike Recovery (%)	Acceptable Limits (%)

EP075(SIM)B-LL: Benzo(g.h.i)perylene	191-24-2	0.1	µg/L	<0.10	5 µg/L	95.8	57.0	126

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- This is a rebatch of EM2421846.

RE: Macquarie Point Lab batches - End of year reporting

From Savini Suduweli Kondage <Savini.SuduweliKondage@eurofinsanz.com>
Date Tue 17/12/24 1:10 PM
To Martin, Tim <Timothy.Martin@aecom.com>; SH_AU_CAU001_EnviroSampleVic <EnviroSampleVic@eurofinsanz.com>
Cc Crowe, Robert <Robert.Crowe@aecom.com>; Lath, Supriya <Supriya.Lath@aecom.com>

Verified Sender: This email is from an internal and/or verified domain which passed security verifications. Remember to still be cautious with personal data and follow company policies.

Hi Tim,

We will get those amendments made ASAP.

@SH_AU_CAU001_EnviroSampleVic -Can you please action the below? Thank you.

Kind Regards,

Savini Suduweli
Phone : +61 3 8564 5051
Mobile : +61 447 222 760
Email : Savini.Suduwelikondage@eurofinsanz.com

Subject: RE: Macquarie Point Lab batches - End of year reporting

Unverified Sender: The sender of this email has not been verified. Review the content of the message carefully and verify the identity of the sender before acting on this email: replying, opening attachments or clicking links.

Hey Savini; thank you so much for reviewing the summary of QCs below.

QC156: This was to be forwarded to ALS (from batch #1171413).
- Coincidentally, we submitted separate samples with Sample IDs QC155 and QC156 in batch #1169377 also (which were trip blanks).

QC184: This was incorrectly identified for Eurofins sampling.

Per our phone call, can you please action the following:

1. Update the Sample IDs of QC155 and QC156 (under batch #1169377) to be **QC155-1** and **QC155-2** respectively.
2. Can you please send QC184 to ALS for the same analysis.

Kind Regards,

TIMOTHY MARTIN

Principal Environmental Engineer, ANZ VSA

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2422568**	Page	: 1 of 4
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR ROBERT CROWE	Telephone	: +6138549 9645
Project	: 60693007	Date Samples Received	: 19-Dec-2024
Site	: ----	Issue Date	: 30-Dec-2024
Sampler	: Andrew Christensen, JACOB MULLER, TAYA GERSTEL	No. of samples received	: 1
Order number	: 60693007 7	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **SOIL**

Quality Control Sample Type		Count		Rate (%)		Quality Control Specification
Analytical Methods	Method	QC	Regular	Actual	Expected	
Matrix Spikes (MS)						
Benzo(a)pyrene and other PAHs - Waste Classification (TAS requirements)	EP075-TAS	0	1	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
Benzo(a)pyrene and other PAHs - Waste Classification (TAS requirements)	EP075-TAS	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
Tumbler Extraction of Solids - VIC EPA Screen	ORG17-EM	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC
* = The final LOR has been raised due to dilution or other sample specific cause; adjusted LOR is shown in brackets. The duplicate ranges for Acceptable RPD% are applied to the final LOR where applicable.

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Jarwis Nheu	Non-Metals Team Leader	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- This is a rebatch of EM2422180.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **EM2422713**	Page	: 1 of 4
Client	: **AECOM AUSTRALIA PTY LTD**	Laboratory	: Environmental Division Melbourne
Contact	: MR TIMOTHY MARTIN	Telephone	: +6138549 9645
Project	: Soil Samples	Date Samples Received	: 15-Dec-2024
Site	: ----	Issue Date	: 07-Jan-2025
Sampler	: ----	No. of samples received	: 1
Order number	: Macquarie Point 60693007 7	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

Matrix: **SOIL**

Method / Container / Client Sample ID(s)	Extraction / Preparation			Analysis		
	Date extracted	Due for extraction	Days overdue	Date analysed	Due for analysis	Days overdue
EN33: TCLP Leach - Inorganics/Non-Volatile Organics (Glass Vessel)						
Non-Volatile Leach: 14 day HT(e.g. SV organics)						
QC148	30-Dec-2024	20-Dec-2024	**10**	----	----	----

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	SOIL	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
TCLP for Non & Semivolatile Analytes - Glass Leaching Vessel	EN33a-G	SOIL	In house QWI-EN/33 referenced to USEPA SW846-1311: The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.
Separatory Funnel Extraction of Liquids	ORG14	SOIL	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.

Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Dilani Fernando	Laboratory Coordinator	Melbourne Inorganics, Springvale, VIC
Xing Lin	Senior Organic Chemist	Melbourne Organics, Springvale, VIC

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- This is a rebatch of EM2422180.

Importance: High

CAUTION: This email originated from outside of ALS. Do not click links or open attachments unless you recognize the sender and are sure content is relevant to you.

ALS, please conduct the following additional analysis for **leachable PAH (via method EP075(SIM)B-LL using TCLP)** for:

- Similar analysis as requested for my other batches; refer to EM2422713, EM2422444, EM2422063...

Batch EM2422260:

- **QC164**
- **QC172**
- **QC174**

Batch EM2422232:

- **QC197**

Batch EM2422568

- **QC184**

Analysis required by 13 January 2025.

Regards,

TIMOTHY MARTIN

Subject: RE: RESULTS & EDD for ALS Workorder : EM2422260 | Your Reference: 60693007 7

Peter,

Please conduct additional analysis for leachable PAH (via method EP075(SIM)B-LL using TCLP) for QC164, QC172 and QC174, from batch EM2422260.

Kind Regards,

TIMOTHY MARTIN

No. of coolers/boxes	: ----	Temperature	: ----
Receipt Detail	:	No. of samples received / analysed	: 5 / 5

General Comments

- This report contains the following information:
  - Sample Container(s)/Preservation Non-Compliances
  - Summary of Sample(s) and Requested Analysis
  - Proactive Holding Time Report
  - Requested Deliverables
- **Please direct any queries related to sample condition / numbering / breakages to Client Services.**
- Sample Disposal - Aqueous (3 weeks), Solid (2 months) from receipt of samples.
- Unless otherwise stated, analytical work for this work order will be conducted at ALS Melbourne, NATA accreditation no. 825, site no. 13778.
- **Please refer to the Proactive Holding Time Report table below which summarises breaches of recommended holding times that have occurred prior to samples/instructions being received at the laboratory. The laboratory will process these samples unless instructions are received from you indicating you do not wish to proceed. The absence of this summary table indicates that all samples have been received within the recommended holding times for the analysis requested.**
- This is a rebatch of EM2422260.
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

Matrix: **SOIL**

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, where applicable to the methodology, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

Matrix: **SOIL**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*	
Laboratory Duplicates (DUP)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	5	**0.00**	**10.00**	×	NEPM 2013 B3 & ALS QC Standard
Laboratory Control Samples (LCS)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	1	5	**20.00**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard
Method Blanks (MB)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	1	5	**20.00**	**5.00**	✓	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)							
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	0	5	**0.00**	**5.00**	×	NEPM 2013 B3 & ALS QC Standard

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
PAHs (GC/MS - SIM) Low-Level	EP075(SIM)B-LL	SOIL	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
TCLP for Non & Semivolatile Analytes - Glass Leaching Vessel	EN33a-G	SOIL	In house QWI-EN/33 referenced to USEPA SW846-1311: The TCLP procedure is designed to determine the mobility of both organic and inorganic analytes present in wastes. The standard TCLP leach is for non-volatile and Semivolatile test parameters.
Separatory Funnel Extraction of Liquids	ORG14	SOIL	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

- **No Laboratory Duplicate (DUP) Results are required to be reported.**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

- **No Matrix Spike (MS) or Matrix Spike Duplicate (MSD) Results are required to be reported.**

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contract for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- This is a rebatch of EM2422260.
- EN33a-G: EM242627-001,002 Due to limited sample for leach analysis, a scaled down amount of 50g into 1000mL was used.
- EN33a-G: EM242754-001,002,003,004,005 Due to limited sample for leach analysis, a scaled down amount of 50g into 1000mL was used.

FQM - Daily Activity Report

Q4AN(EV)-002-FM1

Project Name:	Maquarie Point Development	Project Number:	60693007
Project Location:	41 Evans Street Hobart	Client:	MPDC
Date of Fieldwork:	5/12/24	PM Name:	Rob Crowe
Time Arrive:	7:00	Time Depart:	

Administration

Personnel On-Site:	Jacob.M / Andrew.C
Contractors (Inducted, Downtime):	SWO Graham, Michael, T

Tasks Undertaken

Describe tasks and time of activities undertaken, observations, communications with PM, clients and subcontractors etc.

☐ Cross out unused portions of the site notes ☐ Indicate QAQC samples collected & note on tracking sheet

☐ Record number waste drums transported on & off-site ☐ Indicate observations of on-Site environmental receptors

Indicate Weather Conditions

6:45 pick up
7:00 onsite
7:15 pre start
11:00 drill accessible car park locations
12:00 move onto black cap area and Continue drilling
12:30 lunch
16:30 drill in north area
Jim talk to black cap regarding locations in their compound & confirm sewer location
17:00 - finish COC, pack up and collect ICE

HSE Actions

Describe any HSE actions or observations or additional information that is not recorded in the HSEP

FQM - Daily Activity Report

Q4AN(EV)-002-FM1

Project Name:	Maquarie Point Development	**Project Number:**	60693007
Project Location:	41 Evans Street Hobart	**Client:**	MPDC
Date of Fieldwork:	06/12/24	**PM Name:**	Rob Crowe
Time Arrive:	7:06	**Time Depart:**	

Administration

Personnel On-Site:	Jacob M / Andrew C
Contractors (Inducted, Downtime):	SWD Graham, ~~Nicole~~ Michael, T

Tasks Undertaken

Describe tasks and time of activities undertaken, observations, communications with PM, clients and subcontractors etc.

☐Cross out unused portions of the site notes ☐ Indicate QAQC samples collected & note on tracking sheet

☐ Record number waste drums transported on & off-site ☐ Indicate observations of on-Site environmental receptors

Indicate Weather Conditions:

7:00 - onsite
7:15 - Prestart
8:30 - Drill final carpark location
9:15 - Move into Blackcap carpark and continue drilling
12:00 - Lunch
12:30 - Resume drilling in main area
15:15 - Jacob leaves
15:20 - Finish drilling
15:30 - Complete COCs
15:45 - Drop of samples and pick up more soil Jars
14:15 - Drop supplies back at compound, finish paperwork, leave site

HSE Actions

Describe any HSE actions or oberservations or additional information that is not recorded in the HSEP

Date of Fieldwork:	09/12/2024	**PM Name:**	Rob Crowe
Time Arrive:	7:00 am	**Time Depart:**	

Administration

Personnel On-Site:	Andrew Taya
Contractors (Inducted, Downtime):	South West Drilling, Grethame, Michael, T

Tasks Undertaken

Describe tasks and time of activities undertaken, observations, communications with PM, clients and subcontractors etc.

☐Cross out unused portions of the site notes ☐ Indicate QAQC samples collected & note on tracking sheet

☐ Record number waste drums transported on & off-site ☐ Indicate observations of on-Site environmental receptors

Indicate Weather Conditions:

7:00 - Arrive on site
7:30 - Begin drilling
8:45 - Taya arrives on site
11:30 - Begin NDD
12:30 - Lunch
13:00 - Resume drilling and NDD
16:00 - Finish drilling
17:30 - leave site

FQM - Gas Monitoring Calibration Record

Q4AN(EV)-003-FM1

Project Name:	Maquarie Point Development	**Project Number:**	60693007
Project Location:	41 Evans Street Hobart	**Client:**	MPDC
PM Name:	Rob Crowe	**Fieldwork Staff Name:**	JM AC TG

This calibration record is intended to prompt fieldwork staff to calibrate various gas instruments (PID, LEL, Landfill gas meters) daily before the start of fieldworks.

INSTRUMENT DETAILS

Supplier:	Ergip
Make and Model:	Rikken GX
Serial Number:	0028
For PID - Lamp Photon Energy (eV):	10.6

CALIBRATION

Calibration (Span) Gas:	Isobutylene	Methane 2.5%
Batch Number:	10464-10	10954-11
Expiry Date:	2028	2026
Concentration (ppm or % v/v):	100 ppm	2.5%

CALIBRATE WITH SPAN GAS

Calibration Date:	3/12/24	4/12/24	5/12/24	3/12/24	4/12/24	5/12/24
Calibration Time:	7:36	7:51	7:20	7:38	7:55	7:25
Fresh Air Calibration Reading (ppm or % v/v):	0	0	0	0%	0%	0
Calibration Reading (ppm or % v/v):	100	100	100	50%	50%	50%

CORRECTION FACTOR

The project HSEP provides the target compound/s of interest and should include the appropriate correction factor to be used for the PID.

Target Compound/s:	Isobutylene	Methane
Correction Factor:	1	2.5%

BUMP TEST WITH SPAN GAS

Time:	7:37	7:51	7:41	7:20	7:56	7:26
Bump Test Reading (ppm):	95.6	100.6	50%	100.9	50%	51%

ALARM LEVELS

The project HSEP provides actions levels for the target compound/s of interest and the instrument should be set up with high and low level alarms based on the action level concentrations where required.

High Level Alarm (ppm or % v/v):	100	100	5%	5%	5
Low Level Alarm (ppm or % v/v):	50	50	1%	1%	1%

TEST ALARMS BY BUMP TEST

Time:	7:37	7:51	7:41	7:20	7:56	7:26
Alarms Activated at Low Level (Y/N):	Y	Y	Y	Y	Y	Y

COMMENTS

Detail any equipment faults, minor maintenance performed, change of batteries or technical support provided.

FQM - Gas Monitoring Calibration Record

Q4AN(EV)-003-FM1

Project Name:	Maquarie Point Development	**Project Number:**	60693007
Project Location:	41 Evans Street Hobart	**Client:**	MPDC
PM Name:	Rob Crowe	**Fieldwork Staff Name:**	JM AC TG

This calibration record is intended to prompt fieldwork staff to calibrate various gas instruments (PID, LEL, Landfill gas meters) daily before the start of fieldworks.

INSTRUMENT DETAILS

Supplier:	Envip
Make and Model:	Altair GX
Serial Number:	0028
For PID - Lamp Photon Energy (eV):	10.6

CALIBRATION

Calibration (Span) Gas:	Isobutylene	methane 2.5%
Batch Number:	10464 - 10	10954 - 11
Expiry Date:	2028	2026
Concentration (ppm or % v/v):	100 ppm	2.5%

CALIBRATE WITH SPAN GAS

Calibration Date:	6/12/24			6/12/24		
Calibration Time:	7:15			7:24		
Fresh Air Calibration Reading (ppm or % v/v):	0			0		
Calibration Reading (ppm or % v/v):	100.8			50%		

CORRECTION FACTOR

The project HSEP provides the target compound/s of interest and should include the appropriate correction factor to be used for the PID.

Target Compound/s:	Isobutylene	50% LEL
Correction Factor:	1	

BUMP TEST WITH SPAN GAS

Time:	7:16			7:26		
Bump Test Reading (ppm):	105.8			50%		

ALARM LEVELS

The project HSEP provides actions levels for the target compound/s of interest and the instrument should be set up with high and low level alarms based on the action level concentrations where required.

High Level Alarm (ppm or % v/v):	100	5%
Low Level Alarm (ppm or % v/v):	50	1%

TEST ALARMS BY BUMP TEST

Time:	7:16			7:24		
Alarms Activated at Low Level (Y/N):	Y			Y		

COMMENTS

UCL Statistics for Data Sets with Non-Detects

User Selected Options	
Date/Time of Computation	ProUCL 5.19/05/2025 12:33:16 PM
From File	inputs_250507.xls
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

TPH C10-C36 TCC - Anthropogenic Fill

General Statistics

Total Number of Observations	429	Number of Distinct Observations	188
Number of Detects	249	Number of Non-Detects	180
Number of Distinct Detects	187	Number of Distinct Non-Detects	2
Minimum Detect	50	Minimum Non-Detect	50
Maximum Detect	59092	Maximum Non-Detect	500
Variance Detects	14967256	Percent Non-Detects	41.96%
Mean Detects	1016	SD Detects	3869
Median Detects	400	CV Detects	3.808
Skewness Detects	13.83	Kurtosis Detects	206.9
Mean of Logged Detects	6.034	SD of Logged Detects	1.158

Normal GOF Test on Detects Only

Shapiro Wilk Test Statistic	0.206	**Normal GOF Test on Detected Observations Only**
5% Shapiro Wilk P Value	0	Detected Data Not Normal at 5% Significance Level
Lilliefors Test Statistic	0.401	**Lilliefors GOF Test**
5% Lilliefors Critical Value	0.0566	Detected Data Not Normal at 5% Significance Level

Detected Data Not Normal at 5% Significance Level

Kaplan-Meier (KM) Statistics using Normal Critical Values and other Nonparametric UCLs

KM Mean	610.9	KM Standard Error of Mean	144.2
KM SD	2980	95% KM (BCA) UCL	911.6
95% KM (t) UCL	848.5	95% KM (Percentile Bootstrap) UCL	882.3
95% KM (z) UCL	848	95% KM Bootstrap t UCL	1311
90% KM Chebyshev UCL	1043	95% KM Chebyshev UCL	1239
97.5% KM Chebyshev UCL	1511	99% KM Chebyshev UCL	2045

Gamma GOF Tests on Detected Observations Only

A-D Test Statistic	4.016E+28	**Anderson-Darling GOF Test**
5% A-D Critical Value	0.803	Detected Data Not Gamma Distributed at 5% Significance Level
K-S Test Statistic	0.154	**Kolmogorov-Smirnov GOF**
5% K-S Critical Value	0.0606	Detected Data Not Gamma Distributed at 5% Significance Level

Detected Data Not Gamma Distributed at 5% Significance Level

Gamma Statistics on Detected Data Only

k hat (MLE)	0.682	k star (bias corrected MLE)	0.676
Theta hat (MLE)	1490	Theta star (bias corrected MLE)	1503
nu hat (MLE)	339.5	nu star (bias corrected)	336.7
Mean (detects)	1016		

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

56	This is especially true when the sample size is small.											
57	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates											
58					Minimum	0.01			Mean	589.7		
59					Maximum	59092			Median	120		
60					SD	2987			CV	5.066		
61					k hat (MLE)	0.159			k star (bias corrected MLE)	0.159

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs

GROS may not be used when kstar of detects is small such as <1.0, especially when the sample size is small (e.g., <15-20)

For such situations, GROS method may yield incorrect values of UCLs and BTVs

56	This is especially true when the sample size is small.											
57	For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Executive Summary

The Macquarie Point Development Corporation (the Corporation) has engaged the services of AECOM Australia Pty Ltd (AECOM) in the role of Project Remediation Consultant to assist with the development, implementation and ongoing oversight of a remediation strategy for the Macquarie Point Site in Hobart, Tasmania (the Site).

The Site is currently undergoing an Environmental Audit under Division 2, Section 39F(1) of the *Macquarie Point Development Act 2012* (last amended 1 July 2023), which states:

Redevelopment of a part of the Site may not occur until an accredited environmental auditor has certified that the remediation of the part of the Site has occurred to a standard that is satisfactory for the purposes of the proposed redevelopment.

As part of ongoing assessment and investigation of the Site, and to provide recent and up-to-date information on the Site's environmental condition to the Environmental Auditor in assessing the suitability of the proposed future development, AECOM completed a soil, groundwater and soil vapour investigation at the Site in May and June 2025, in order to:

- Repair or replace gaps in the soil vapour and groundwater monitoring networks identified in February 2025 (AECOM, 2025c).
- Collect additional data to:
  - Update and refresh knowledge on the condition of Site groundwater and soil vapour and assess if any changes in condition have occurred in the period since previous assessments, or due to the updated Site development planning, which would result in unacceptable potential risks to current or future users or the Site or surrounding areas.
  - Conduct additional groundwater and soil vapour assessment of the Gateway area, as recommended in *Remediation Validation Report – The Gateway* (AECOM, 2025a).
  - Review and reassess potential risks to off-Site ecological receptors, last evaluated in *Assessment of Potential Off-Site Ecological Impacts* (AECOM, 2020a), and determine if any unacceptable risk to off-Site receptors is present.
  - Assess Light Non-Aqueous Phase Liquid (LNAPL) plume status and stability, last evaluated in *Assessment of LNAPL Remediation End-Points* (AECOM, 2021b), including potential mobility of LNAPL Plume B in the southeast corner of the Site identified in 2025 (AECOM, 2025c).
  - Further investigate possible Potential Acid Sulfate Soil (PASS) in unsaturated fill (AECOM, 2025b).
  - Provide sufficient information to determine and implement suitable remediation, mitigations or management measures during Site development and ongoing use, to be documented in the Site Environmental Management Plan (SEMP) (AECOM, 2024b).

This report has been prepared to present the outcomes of this assessment.

Scope of Work Completed

The following activities were completed as part of this assessment:

- Drilling and installation at 43 locations, in order to:
  - Install 19 new groundwater monitoring wells.
  - Install 14 new soil vapour monitoring wells.
  - Advance and sample 10 soil bores for the assessment of PASS in unsaturated soil.

  Soil samples were also collected and analysed from groundwater and soil vapour wells installed.
- Installation of two sub-slab vapour pins above LNAPL Plume B.
- Relocation, repair and/or redevelopment and resurveying of 25 groundwater wells which were previously unable to be located or were identified as damaged.

- A Site-wide Groundwater Monitoring Event (GME), including:
  - Gauging of 87 wells on- and off-Site.
  - Development and sampling of 56 groundwater wells using low-flow sampling methods.
  - LNAPL transmissivity testing on three groundwater wells with sufficient LNAPL present.
- A soil vapour sampling event at 18 locations consisting of 16 soil vapour bores installed between 1 and 2.5 m bgl, and two sub-slab pins.
- Preparation of this report.

Results of Assessment

Protected Environmental Values

On the basis of soil, groundwater and soil vapour analytical results for CoPC, **Table E1** below provides a summary of the conclusions made with reference to the Tier 1 assessment undertaken against identified PEVs.

Table E1 Protected Environmental Values - Tier 1 Assessment Summary

Applicable PEVs [1]	PEV Precluded? [2]	Comment
Soil		
Maintenance of Modified and Highly Modified Ecosystems	Yes	Concentrations of a combination of metals (copper, chromium, nickel, zinc), TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction, total xylenes, naphthalene and benzo(a)pyrene were reported above the adopted Tier 1 assessment criteria for both Modified and Highly Modified Ecosystems.
Human Health – Direct Contact – Low Density Residential	Yes	Concentrations of a combination of metals (chromium, lead), TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction and PAHs (benzo(a)pyrene, Sum of PAHs) were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Medium/ High Density Residential	Yes	Concentrations of a combination of chromium, TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction and PAHs (benzo(a)pyrene, Sum of PAHs), were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Recreation / Open Space	Yes	Concentrations of a combination of chromium, TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction and PAHs (benzo(a)pyrene, Sum of PAHs) were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Commercial / Industrial	Yes	Concentrations of a combination of TRH >C16-C34 fraction and benzo(a)pyrene were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Intrusive Maintenance Workers	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from soil) – Residential	Yes	Concentrations of TRH C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene, total xylenes and naphthalene were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from soil) –	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.

Applicable PEVs [1]	PEV Precluded? [2]	Comment
Recreational/ Open Space		
Human Health – Vapour Intrusion (from soil) – Commercial / Industrial	Yes	Concentrations of TRH C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene, and naphthalene were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from soil) – Intrusive Maintenance Workers	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Buildings and structures	Yes	Field pH (pH_F) measured as part of the PASS assessment was reported above the adopted Tier 1 assessment criteria.
Aesthetics	Yes	Anthropogenic materials (including brick, concrete, metal, ceramic, wood, slag and glass fragments), hydrocarbon odours and/or staining (green staining, LNAPL sheen and/or tar residue) were observed.
Traditional Owner Cultural Values	Yes	Precluded PEVs related to ecosystem protection, recreational use and aesthetics are also considered to preclude Traditional Owner cultural values.
Groundwater		
Ecosystem Protection (Marine)	Yes	Concentrations of a combination of metals (copper, manganese, zinc), PFOS, cyanide, ammonia, TRH >C10-C40 fraction (sum), TPH >C10-C36 fraction (sum), ethylbenzene, total xylenes, PAHs (naphthalene, anthracene, phenanthrene), phenols (phenol, 2-Methylphenol (o-Cresol), 2,4-Dimethylphenol) were reported above the adopted Tier 1 assessment criteria. It is noted that risks to offsite ecological receptors will be assessed and reported in a separate report.
Human Health – Drinking Water	Yes	Concentrations of a combination of metals (cadmium, manganese), PFAS (PFOS, sum of PFHxS + PFOS) cyanide, nitrate, benzene, ethylbenzene, o-xylene, PAHs (naphthalene, sum of PAHs), phenols (2-Methylphenol (o-Cresol), Total Cresols, 2,4-Dimethylphenol, and sulphate as SO4 were reported above the adopted Tier 1 assessment criteria.
Human Health – Recreation (Secondary Contact)	Yes	Concentrations of benzene, naphthalene, sum of PAHs, PFOS and cyanide total were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) – Residential	Yes	Concentrations of TRH >C6-C10 (minus BTEX) (F1) and TRH >C10-C16 (minus naphthalene) (F2) were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) – Recreation / Open Space	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.

Applicable PEVs [1]	PEV Precluded? [2]	Comment
Human Health – Vapour Intrusion (from groundwater) – Commercial / Industrial	Yes	Concentrations of TRH >C10-C16 (minus naphthalene) (F2) were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) – Intrusive Maintenance Workers	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) - Explosive Hazard	Yes	Concentrations of methane were reported above the adopted Tier 1 assessment criteria.
Primary Industries Criteria – Irrigation	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Primary Industries Criteria – Stock Watering	Yes	Concentrations of cadmium, sulfate as SO4, PFOS, and sum of PFHxS + PFOS were reported above the adopted Tier 1 assessment criteria.
Buildings and structures	Yes	Concentrations of a chloride and sulfate were reported above the adopted Tier 1 assessment criteria.
Aesthetics	Yes	A hydrocarbon odour and/or measurable LNAPL / LNAPL sheen was noted.
Traditional Owner Cultural Values	Yes	Precluded PEVs related to ecosystem protection, recreational use and aesthetics are also considered to preclude Traditional Owner cultural values.
Soil Vapour		
Human Health – Residential (Sand)	Yes	Concentrations of benzene, naphthalene and TPH >C8-C10 aromatic fraction were reported above the adopted Tier 1 assessment criteria.
Human Health – Recreational / Open Space (Sand)	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Human Health – Commercial / Industrial (Sand)	Yes	Concentrations of benzene, naphthalene and TPH >C8-C10 aromatic fraction were reported above the adopted Tier 1 assessment criteria.
Human Health - Intrusive Maintenance Worker	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Safety Action Levels for Subsurface Methane Near Foundations	Yes	Concentrations of methane were reported above the adopted Tier 1 assessment criteria.

Notes: 1 – PEVs applicable to the Site and adjacent area based on the potential future land use planned for the Macquarie Point development and consideration of current and potential future receptors; 2 – PEVs precluded based on concentrations of CoPC being reported above Tier 1 assessment criteria for soil and groundwater, or other observed features (i.e., anthropogenic materials in soil).

Given some soil and groundwater PEVs are considered as potentially precluded due to concentrations of CoPC being reported above Tier 1 assessment criteria, further assessment has been conducted against Site Derived RC has been undertaken (refer **Section 7.2.2**), to inform potential measures recommended for the protection of human health.

No RC have been adopted for soil vapour, and exceedances of the adopted criteria in this media have been used to inform mitigation/management requirements. Based on detected vapour concentrations, mitigation or management is considered required for:

- Commercial / Industrial development of the Site – benzene, naphthalene, and TPH >C8-C10 aromatic fraction.
- Potential explosive methane intrusion – all areas excluding the Escarpment, Audit Area 4 East, and Regatta Point. If any building or structure with a footprint extending to other areas is proposed in these areas however (i.e., the Multipurpose Stadium), methane mitigation will be required to be extended to these areas.

Assessment of potential off-Site risks to aquatic ecological receptors will be undertaken as a separate report.

Site Derived Remediation Criteria

On the basis of soil and groundwater analytical results, **Table E2** below provides a summary of the screening against Site Derived RC to inform potential assessment, remediation or management measures required at the Site.

Table E2 Site Specific Remediation Criteria – Summary

Future Use Scenarios [1]	Further Assessment or Remediation Required? [2]	Comment
Soil		
Potential Future Residents (building with a basement car park)	No	TRH >C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene, total xylenes and naphthalene were reported above the Site Derived RC in soil samples collected from 13 locations as part of this investigation. Given each of these are outside the proposed future residential building footprints, which are limited to Regatta Point to the north of the Site, detected exceedances are not considered to present an unacceptable vapour intrusion risk to future development.
Potential Future Residents (low-rise slab-on-grade)	No	
Potential Future Residents (slab-on-grade with unknown construction or multi-storey building)	No	
Potential Future Recreational Open Space Users	No	Concentrations of CoPC were reported below the Site Derived RC.
Potential Future Commercial/Light Industrial Workers (working within a basement)	No	A combination of TRH >C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene and naphthalene were reported above the Site Derived RC at seven locations: • Four locations associated with LNAPL Plumes A1 and A2 (SV32, MW183, MW184, and MW185) • Four locations within the former gasworks area of the Site (MW196, MW198, SV43 and SV44). While exceedances of these RC criteria near LNAPL are not considered to indicate a risk of vapour intrusion, based on direct sampling of soil vapour in the vicinity, the reported exceedances of benzene and naphthalene in soil in the former gasworks area are considered to represent a potential vapour intrusion risk and will require mitigation as part of future development.
Potential Future Commercial/Light Industrial Workers (low-rise slab-on-grade)		
Potential Future Commercial (slab-on-grade with unknown construction or multi-storey building)		

Future Use Scenarios [1]	Further Assessment or Remediation Required? [2]	Comment
Potential Future Maintenance Workers	No	Concentrations of CoPC were reported below the Site Derived RC.
Groundwater		
Potential Future Residents (slab-on-grade with unknown construction or multi-storey building)	No	Concentrations of CoPC were reported below the Site Derived RC.
Potential Future Residents (building with a basement car park)	No	
Potential Future Residents (low-rise slab-on-grade)	No	
Potential Future Recreational Open Space Users	No	
Potential Future Commercial/Light Industrial Workers (working within a basement)	No	
Potential Future Commercial/Light Industrial Workers (low-rise slab-on-grade)	No	
Potential Future Commercial Workers (slab-on-grade with unknown construction or multi-storey building)	No	
Potential Future Maintenance Workers	No	

Notes: 1 – Future use scenarios applicable to Macquarie Point and the surrounding area based on the potential future land use planned and consideration of current and potential future receptors; 2 – Based on concentrations of CoPC being reported above the Site Derived RC for soil and groundwater.

While no remediation of soil or groundwater is considered required for future development, mitigation to prevent potential vapour intrusion by TRH, benzene and naphthalene is considered required for any buildings and structures which include the former gasworks area within their footprint.

LNAPL Plume Stability

Measurable LNAPL was observed in LNAPL Plume B wells MW03, PW02, and S8. It is noted that measurable LNAPL (5 mm) was briefly observed in MW185 prior to development, however only a sheen was noted in this well throughout the remainder of the June 2025 investigation.

Field observations and mobility testing indicate that LNAPL plumes A1, A2, A3 and B are considered to be very low in mobility, however at least one further round of groundwater monitoring and LNAPL mobility testing is considered required to provide additional temporal data on LNAPL plume presence and mobility following the recent earthworks across the Site.

The status of the LNAPL remediation end-points provided in the LNAPL RAP (AECOM, 2017) were previously assessed as met in AECOM (2021b). Further review of these endpoints based on the results of the June 2025 investigation, indicated that the three remediation end-points for LNAPL remediation continue to be met, and it is further considered that:

- Further LNAPL remediation is not practicable and is unlikely to materially change the extent, risks, or longevity of LNAPL on Site groundwater.
- LNAPL plumes are stable and unlikely to migrate.
- With the controls and requirements documented in the SEMP, LNAPL does not represent a risk to human or ecological receptors, noting that update and review of the evaluation of risks to off-Site ecological receptors is currently being undertaken.

As such, it is considered that no further remediation of LNAPL is required. The locations of LNAPL, and controls and mitigations, currently documented in the SEMP should be maintained to allow management without unacceptable levels of risk during future Site operation and management.

Acid Sulfate Soil

Results of ASS sampling in soil have been assessed and reported separately, in context of the overall understanding of PASS at the Site, in *Acid Sulfate Soil Investigation* (AECOM, 2025h).

Recommendations

Further Assessment and Remediation

Based on the results of the June 2025 investigation, it is considered that further soil, groundwater or soil vapour assessment and remediation at the Site would not likely change the risk to on-Site and off-Site receptors following implementation of risk mitigation measures into future development design and construction at the Site. Therefore, there is no recommendation for further assessment or remediation on this basis.

The data collected in this investigation should be considered in any other assessments of the Site, where relevant, and incorporated into the next review and update of the SEMP (AECOM, 2024b).

Management Measures

Management measures recommended at the Site are below:

- Development of the Site should be restricted to the land uses considered in this investigation. Proposed development for each use should be limited to the areas delineated on **Figure F1**.
- The Site management measures used to derive the RC and documented in the SEMP should be maintained for future development.
- Management and mitigations measures for potential vapour intrusion are considered required for future development for:
    - Methane above criteria in groundwater and soil vapour in the southern and eastern portions of the Site. Methane mitigation is not considered required in Regatta Point, the Escarpment, or Audit Area 4 East, with the exception of structures (such as the proposed stadium) which include areas of elevated methane in their footprint.
    - Benzene, naphthalene, and TRH in the former gasworks area (the Gateway), and any buildings or structures which include this area in their footprint.
    - Air monitoring for benzene should be undertaken for any intrusive maintenance works in the former gasworks area, if further monitoring is not undertaken to confirm results.

1.0 Introduction

The Macquarie Point Development Corporation (the Corporation) has engaged the services of AECOM Australia Pty Ltd (AECOM) in the role of Project Remediation Consultant to assist with the development, implementation and ongoing oversight of a remediation strategy for the Macquarie Point Site in Hobart, Tasmania (the Site).

The Site is currently undergoing an Environmental Audit under Division 2, Section 39F(1) of the *Macquarie Point Development Act 2012* (last amended 1 July 2023), which states:

Redevelopment of a part of the site may not occur until an accredited environmental auditor has certified that the remediation of the part of the site has occurred to a standard that is satisfactory for the purposes of the proposed redevelopment.

As part of ongoing assessment and investigation of the Site, and to provide recent and up-to-date information on the Site's environmental condition to the Environmental Auditor in assessing the suitability of the proposed future development, AECOM completed a soil, groundwater and soil vapour investigation at the Site in May-June 2025 (reported herein).

The Site layout is presented **Figure F1** (**Appendix A**).

1.1 Background

The Site has been delineated into eight sub-areas (including Regatta Point added in 2023) for the purposes of environmental assessment and remediation. Between 2019 and 2021, Site Suitability Statements have been issued by the Site Environmental Auditor for four of the eight areas (the Goods Shed and Yard, the Escarpment, the Promenade and Underground Carpark, and the Precinct North). **Figure 1** below shows the location of each assessment area in context of the Site.

Figure 1 Site Assessment Areas

The Royal Engineers Building and Land, to the west of Macquarie Point, is included in the overall planned development of the area, however no changes in use are planned and it is not intended to include this area in the Environmental Audit at this time.

Since issue of these Site Suitability Statements, numerous remediation programs and changes in Site surface cover and elevation have occurred, and the overall proposed development of the Site has been updated with issue of the *Mac Point Precinct Plan* (MPDC, 2024) as described in **Section 2.3**. The existing Site Suitability Statements refer to the previous proposed development and require reassessment and review to allow for the changes in proposed development.

Site-wide groundwater and soil vapour monitoring was last conducted in 2019, and the data collected from these events is also considered to be less representative of Site conditions as time passes. Inspection of the groundwater and soil vapour bores at and surrounding the Site undertaken in February 2025 (AECOM, 2025c) also identified damage or destruction to existing monitoring points previously installed, and repair or replacement of monitoring points is considered required to allow sufficient data to be collected to characterise current Site conditions.

1.2 Objectives

The overall goal of environmental investigations, assessments and remediation of the Site is to identify and remove or mitigate potentially unacceptable risks from soil or groundwater contamination to current or future users or ecological receptors, either on or adjacent to the Site, with sufficient level and quality of information to allow preparation of a Site Suitability Statement by an independent Environmental Auditor as accredited by Section 39F(3) of the *Macquarie Point Development Corporation Act 2012.*

The objectives of the soil, groundwater and soil vapour investigation are to:

- Repair or replace gaps in the soil vapour and groundwater monitoring networks identified in February 2025 (AECOM, 2025c).
- Collect additional data to:
  - Update and refresh knowledge on the condition of Site groundwater and soil vapour and assess if any changes in condition have occurred in the period since previous assessments, or due to the updated Site development planning, which would result in unacceptable potential risks to current or future users or the Site or surrounding areas.
  - Conduct additional groundwater and soil vapour assessment of the Gateway area, as recommended in *Remediation Validation Report – The Gateway* (AECOM, 2025a).
  - Review and reassess potential risks to off-Site ecological receptors, last evaluated in *Assessment of Potential Off-Site Ecological Impacts* (AECOM, 2020a).
  - Assess Light Non-Aqueous Phase Liquid (LNAPL) plume status and stability, last evaluated in *Assessment of LNAPL Remediation End-Points* (AECOM, 2021b), including potential mobility of LNAPL Plume B in the southeast corner of the Site identified in 2025 (AECOM, 2025c).
  - Further investigate possible Potential Acid Sulfate Soil (PASS) in unsaturated fill (AECOM, 2025b).
  - Provide sufficient information to determine and implement suitable remediation, mitigations or management measures during Site development and ongoing use, to be documented in the Site Environmental Management Plan (SEMP) (AECOM, 2024b).

1.3 Scope

The scope of work that was undertaken can be summarised as follows:

- A Site inspection to confirm the condition and accessibility of the existing groundwater monitoring well network and the proposed drilling locations.

- Underground service location and clearance of all proposed drilling locations, including review of available Site plans and Before You Dig Australia (BYDA) plans, and engagement of a qualified underground service locator.
- A total of 45 drilling locations were advanced using a sonic core drill rig, including:
  - 19 Groundwater Monitoring Wells (MW103A, MW120A, MW182, MW183, MW184, MW185, MW186, MW187, MW188, MW189, MW190, MW191, MW192, MW193, MW194, MW196, MW197, MW198 and NR2A).
  - 16 soil vapour monitoring points, including 14 soil vapour wells (SV31, SV32, SV33, SV34, SV35, SV36, SV39, SV40, SV41, SV42, SV43, SV44, SV45 and SV46) and two sub-slab soil vapour monitoring pins (SV37 and SV38).
  - 10 soil bores for the assessment of PASS (BH-004A, BH-004N, BH-004S, BH-004E, BH-004W, ABH-004A, ABH-004N, ABH-004S, ABH-004E, and ABH-004W).
- Repair and/or recovery of 25 pre-existing groundwater monitoring wells, including:
  - Missing/damaged bolt replacement at BG1, BH2_PS, MW122, MW129, MW131_GHD – MW133_GHD, MW148, MW150, MW155 and MW163.
  - Damaged gatic replacement at SV18, MW102, MW121, MW130_GHD (lid & bolt replacement only) and MW36.
  - Clearing of overlying surface material (gravel/asphalt) and installation of new gatic at RN2, TW02 and MW177.
  - Clearing down-well obstructions at MW128A and re-development of MW128A and MW128B to clear potential further debris from the base of each well following recent building demolition activity.
  - Facilitating the removal of heavy items blocking access to underlying wells (MW124A & B, MW149 and MW162)
- Development of 21 groundwater monitoring wells, including the 19 newly installed groundwater wells and two pre-existing wells (MW128A and MW128B) following removal of down-well obstructions / sedimentation at the base of each well.
- Gauging of groundwater level at 87 groundwater monitoring wells, including 19 new and 68 pre-existing groundwater monitoring wells.
- Purging and sampling of 56 groundwater monitoring wells using peristaltic pump low-flow sampling methods, including the 19 newly installed groundwater monitoring wells and 37 selected pre-existing wells.
- Surveying of 19 newly installed groundwater monitoring wells and three repaired groundwater monitoring wells due to a change in top of casing (MW128A, MW128B and TW02)
- LNAPL transmissivity testing at three groundwater monitoring wells (MW03, PW02 and S8).

The scope of work was undertaken in accordance with the *Soil, Groundwater and Soil Vapour Investigation 2025 Sampling and Analysis Quality Plan* (AECOM, 2025d), except as noted in **Section 5.0**.

2.0 Site Details and Background

2.1 Site Details

Details of the Site are summarised in **Table 1** below.

Table 1 Site Details

Item	Description
Macquarie Point Site	
Site Address	10 Evans Street, Hobart, Tasmania
Site Area	Approximately 9.3 ha
Current Site Owners	State of Tasmania (Crown Land)
Title Details	Macquarie Point contains the following land title references: • The majority of Macquarie Point is within land title 113521/1 (formerly CT 114462/1) • A portion of the southwest area (within the Gateway area) is within land title 129483/1
Current Zoning (1)	The Hobart City Council (HCC, 2023) *Sullivans Cove Planning Scheme 1997* notes that the Macquarie Point Site falls within the *Macquarie Point Mixed Use Zone* and is subject to the following use areas: • Commercial and Institutional • Mixed Use • Open Space.
Current Uses	• Macquarie Point is currently used for a number of commercial activities, included office and event space, and commercial/industrial equipment storage. • The Goods Shed, a historical warehouse structure now subject to intermittent use including public events, is located on the southern boundary of Macquarie Point. • An occupied office building (8A Evans Street) is located on the western boundary of Macquarie Point. • The “Red Shed”, located in the south eastern portion of Macquarie Point, is currently used by a microbrewer and includes a public bar. • A warehouse (the SeaRoad Shed) was located in the south-east corner of Macquarie Point but was demolished in 2023. A large slab (the SeaRoad Slab) remains in place and has been used for intermittent storage of construction equipment. • Small retail outlets are located in the area adjacent to the Red Shed (Red Square) which is also used regularly for markets, music and other outdoor events with food vans. • A public car park is present in the south eastern and eastern portion of Macquarie Point. • A roadway (the Northern Vehicular Access) is present on the northern portion of Macquarie Point. • Portions of the northern and north eastern areas of the Site are leased to the Tasmanian Water and Sewerage Corporation (TasWater) and used for equipment storage and soil stockpiling as part of construction of a Sewage

	Pumping Station (SPS) off-Site to the east, which is expected to be complete with all stockpiles removed in September 2025.
Closest Surface Water Body	• Sullivans Cove, approximately 150 m to the south. • River Derwent, approximately 280 m south-east (inferred direction of groundwater flow) and 25 m to the north-east.
Regatta Point	
Address	Located adjacent to McVilly Drive, Queens Domain. A street address is not allocated for this area.
Area	Approximately 0.7 ha
Current Land Owners	The land comprised within Regatta Point is under the authority of: • Department of Natural Resources and Environment Tasmania (DNRET) Property Services (Potential Property ID 2513934), under Crown lease. Regatta Point is currently being transferred to the control of the Corporation.
Title Details	Title details are not available for the public reserve (Potential Property ID 2513934).
Current Zoning	The Hobart City Council (HCC, 2023) *Sullivans Cove Planning Scheme 1997* notes that the Regatta Point Site falls within the *Macquarie Point Wharf & River Zone B* and is subject to the following use areas: • Commercial • Mixed Use • Open Space.
Current Uses	The following is noted with regard to current Regatta Point use and features: • A public reserve in the southern portion of Regatta Point is used for public open space and recreation. Carparking and access to the River Derwent (via two marine jetties and two boat ramps) are present in this area, and accessible via McVilly Drive. • A pumphouse (under Crown Licence) is present in this area. It is not known if this pumphouse is operational, what use is authorised under its licence, or what historical uses it may have had. • A small two-storey building of unknown use is in this area. • A disused rail line and corridor passes to the west of Regatta Point.
Closest Surface Water Bodies	• The River Derwent is located to the east, immediately adjacent to Regatta Point. • Sullivans Cove is located approximately 560 m to the south at the closest point. • Recreational fishing restrictions apply in the waters adjacent to Regatta Point.

2.2 Chemicals of Potential Concern

Prior to European settlement, Hobart and the surrounding areas, including the Site, were occupied and inhabited by the Muwinina people.

Since first European settlement circa 1804, the Site has been subject to land reclamation events, farming, quarrying and various construction and industrial activities, including but not limited to progressive land reclamation events, rail and freight operations, gasworks, and bulk fuel storage.

Based on the known Site history, **Table 2** below presents a summary of the Chemicals of Potential Concern (CoPC) that may be present based on known historical activities or uncovered during investigation of the Site.

Table 2 Chemicals of Potential Concern Summary

Area	Historical Land Uses	Chemicals of Potential Concern
Goods Shed and Yard	• Freight storage and handling. • Vehicle Maintenance. • Fuel Storage and Handling. • Land Reclamation	• TPHs, BTEXN, PAHs and phenolic compounds associated with historical fuel storage and transfer activities. • Chlorinated solvents associated with vehicle maintenance activities. • Metals[1] inferred to be due to historic land reclamation have been detected in fill.
The Escarpment	• Locomotive refuelling comprising fuel storage and transfer facilities. • Railway maintenance workshop. • Rail corridor and fuel transfer infrastructure historically located within the area. • Concrete batching plant. • Land reclamation	• TPHs, BTEXN, PAHs and phenolic compounds associated with historical fuel storage and transfer activities. • Chlorinated solvents associated with locomotive maintenance activities and the storage of hazardous materials. • Heavy metals, chlorinated solvents and hydrocarbons associated with workshop and maintenance areas. • Phosphorus and sulphur associated with locomotive washing. • ACM sourced from historical structures (i.e. cladding). • Hydrocarbons associated with the truck wash. • Metals, chlorinated solvents and hydrocarbons sourced from the historical incineration of paint/ solvents. • Metals[1] inferred to be due to historic land reclamation have been detected in fill.
The Promenade and Underground Carpark	• Locomotive refuelling comprising fuel storage and transfer facilities. • Locomotive maintenance. • Freight storage and handling. • Land reclamation	• TPHs, BTEXN, PAHs and phenolic compounds associated with historical fuel (diesel) storage and transfer activities. • LNAPL has been detected on groundwater • Chlorinated solvents associated with locomotive maintenance activities. • Metals, asbestos and PAHs sourced from materials used to backfill Roundhouse structures. • Metals[1] inferred to be due to historic land reclamation have been detected in fill

Area	Historical Land Uses	Chemicals of Potential Concern
The Precinct North	• Freight storage and handling. • Fuel storage and handing • Land reclamation	• TPHs, BTEXN, PAHs, and phenolic compounds associated with historical fuel (diesel) storage and transfer activities. • Chlorinated solvents associated with locomotive maintenance activities. • LNAPL has been detected on groundwater. • Metals[1] inferred to be due to historic land reclamation have been detected in fill. • PFAS associate with bulk off-Site fuel handing. While review of historical information has not identified the use of products containing PFAS, there is potential for firefighting foams containing PFAS to have been applied as part of emergency response operations or for training purposes during bulk fuel storage in the short period between the adoption of PFAS-containing firefighting foam in the USA in 1967, and the cessation of bulk fuel storage in the 1970s.
The Precinct South	• Freight storage and handling. • Fuel storage and handling • Land reclamation	• TPHs, BTEXN, PAHs, phenolic compounds, and lead associated with historical fuel storage and transfer activities undertaken adjacent to the Site's eastern boundary. • LNAPL has been detected on groundwater. • Metals[1] inferred to be due to historic land reclamation have been detected in fill. • PFAS associate with bulk off-Site fuel handing. While review of historical information has not identified the use of products containing PFAS, there is potential for firefighting foams containing PFAS to have been applied as part of emergency response operations or for training purposes during bulk fuel storage in the short period between the adoption of PFAS-containing firefighting foam in the USA in 1967, and the cessation of bulk fuel storage in the 1970s.

Area	Historical Land Uses	Chemicals of Potential Concern
The Gateway	• Former Hobart Gasworks. • Locomotive refuelling comprising fuel storage and transfer facilities. • Railway maintenance workshop. • Land reclamation	• TPHs, PAHs, BTEXN and phenols sourced from coal tar and tar oils, or from historical fuel storage and transfer activities. • Metals, chlorinated solvents and hydrocarbons associated with workshop and maintenance areas. • Phosphorus and sulphur associated with locomotive washing. • ACM sourced from historical structures (i.e. cladding). • Chlorinated solvents associated with locomotive maintenance activities and the storage of hazardous materials. • Complex cyanides, free cyanides and metals sourced from spent oxides. • TPHs, PAHs and metals sourced from coke, coke breeze, ash and clinker residues. • TPHs and BTEX associated with light and drip oils. • DNAPL has been detected in soil. Two former areas of DNAPL, called Tar Plume A and Tar Plume B, were treated via *in situ solidification* (ISS) in 2024 (AECOM, 2025a). • Phenols, nitrates, sulphates, sulphides, ammonia and PAHs sourced from ammoniacal recovery wastes. • Metals[1] inferred to be due to historic land reclamation have been detected in fill.
Audit Area 4 East	• Rail corridor and fuel transfer infrastructure historically located within the area. • Land reclamation	• TPHs, BTEXN, PAHs and phenolic compounds associated with historical fuel storage and transfer activities. • Buried ACM has been identified in a section of Audit Area 4 East and is currently temporally capped with a concrete layer. • Metals[1] inferred to be due to historic land reclamation have been detected in fill
Regatta Point	• Public boating, yachting, and port activities. • Rail corridor • Fuel pipeline • Land reclamation • Metals	• Metals, TPH/TRH, PAH, BTEXN, phenolic compounds, SVOC, VOCs, TBT, OCPs, cyanide, ammonia and ACM have all been identified as potential CoPC in Regatta Point based on current and historical uses. No field assessment has been conducted to date. • Metals[1] inferred to be due to historic land reclamation have been detected in fill.

Notes: TPHs – total petroleum hydrocarbons; TRH – total recoverable hydrocarbons; PAHs – polycyclic aromatic hydrocarbons; BTEXN – benzene, toluene, ethylbenzene, xylene, naphthalene; ACM – asbestos containing material; VOC – volatile organic compounds; SVOC – semi VOC; TBT – tributyltin; OCP – organochlorinated pesticides; PFAS – Per- and Poly-Fluoroalkyl

Substances; LNAPL – Light Non-Aqueous Phase Hydrocarbons; DNAPL – Dense Non-Aqueous Phase Hydrocarbons; 1 – aluminium, arsenic, cadmium, chromium, copper, lead, manganese, nickel and zinc

In addition, PASS has been identified in saturated estuarine materials, inferred to be former river/sea bed buried by land reclamation, and may be present in unsaturated fill in some areas. Soil methane has also been detected at potentially hazardous levels, and may be due to degradation of hydrocarbon impacts from fuel handling and storage, and/or organic material in buried natural materials.

2.2.1 Identified NAPL or Former NAPL Areas

Previous investigations at the Site have identified non-aqueous phase liquids (NAPL), consisting of LNAPL and DNAPL, which are summarised in **Table 3** below.

Table 3 Known Existing or Former NAPL Areas

Plume ID	Location	Inferred Contamination Source
LNAPL		
LNAPL Plume A1	Roundhouse Refuelling Area in the Promenade and Underground Carpark, central portion of the Site	LNAPL (likely diesel) has been identified at the water table and is likely associated with locomotive refuelling activities associated with spills during refuelling activities and potentially leaks from a historical Aboveground Storage Tank (AST) which is known to have been previously present at this location. Remediation of this LNAPL plume was undertaken between 2015 and 2017 (AECOM, 2021b) via total fluids extraction (TFE). At completion, further recovery of LNAPL from this plume was assessed as not practicable.
LNAPL Plume A2	Roundhouse Refuelling Area in the Promenade and Underground Carpark, central portion of the Site	LNAPL (likely diesel) has been identified at the water table and is likely associated with locomotive refuelling activities associated with spills during refuelling activities and potentially leaks from ASTs. Remediation of this LNAPL plume was undertaken between 2015 and 2017 (AECOM, 2021b) via TFE. At completion, further recovery of LNAPL from this plume was assessed as not practicable.
Former LNAPL Plume A3	Roundhouse Refuelling Area in the Promenade and Underground Carpark on the boundary with the Precinct North, central portion of the Site	Historical documents reference localised LNAPL at this location. Similar to Plume A1, LNAPL is likely associated with locomotive refuelling activities in the Roundhouse Refuelling Area. The LNAPL is understood to have comprised of predominantly diesel fuel, as well as fuel oils associated with diesel engine operation (e.g. lubricants, engine oils etc.) and is likely to be associated with isolated spills. Remediation of this LNAPL plume was undertaken between 2015 and 2017 (AECOM, 2021b) via TFE. At completion, further recovery of LNAPL from this plume was assessed as not practicable. No LNAPL has been detected in wells in this area since 2017.

Plume ID	Location	Inferred Contamination Source
LNAPL Plume B	SeaRoad Shed Slab in the Precinct South, south-east portion of the Site	LNAPL (comprising predominantly diesel with lube oil) has been identified at the water table and is understood to be associated with historical fuel handling and storage activities, in proximity to the SeaRoad Shed. Remediation of this LNAPL plume was undertaken between 2015 and 2017 (AECOM, 2021b) via TFE. At completion, further recovery of LNAPL from this plume was assessed as not practicable.
DNAPL		
Former Tar Plume A	Former gasworks area in the Gateway, south-west corner of the Site	Coal tar DNAPL, likely derived from a horizontal retort/oil reformer which was present in this location during gasworks operation, was observed primarily from 4 m below ground level (m bgl) extending to underlaying dolerite bedrock, and may extend off-Site to the south and west. DNAPL within the Site boundaries, excluding areas in the exclusion zone surrounding a high voltage power cable, were solidified in 2024 and is no longer considered mobile.
Former Tar Plume B	Former gasworks area in the Gateway, south-west corner of the Site	Coal tar DNAPL was observed within a buried vertical tank base. The walls of this tank remained in place and contained DNAPL, which was solidified in 2024 and is no longer considered mobile.
Tar Plume C	Former gasworks area in the Gateway, west boundary of the Site	Coal tar DNAPL was observed below a buried concrete slab and above shallow dolerite, and is considered likely derived from a vertical retort which was present in this location during gasworks operation. DNAPL has been observed between 1.4 and 1.6 m bgl, and is not considered to be in contact with groundwater. The exclusion zone associated with a high voltage power cable prohibits activities which could disturb DNAPL in this area.
Tar Plume D	Former gasworks area in the Gateway, west boundary of the Site	Tar staining, odours and relatively high PID readings (598 ppm) were reported between 3.5 and 4.7 m bgl in this area, and DNAPL present may be resting on the buried base of a former gasholder which appears to be present at 4.7 m bgl. DNAPL is not considered to be in contact with groundwater in this area, and the exclusion zone associated with a high voltage power cable prohibits activities which could disturb DNAPL in this area.

Notes: Chemicals of Potential Concern (CoPC) associated with each of the LNAPL plumes include TPH, PAHs and metals including lead. bgl – below ground level; PID – photoionisation detector.

2.3 Future Development

The Precinct Plan (MPDC, 2024) outlines the concept for the Site which comprises mixed use precincts including, but not limited to, those summarised in **Table 4** below.

Table 4 Precinct Plan - Proposed Development Precincts

Precinct	Land Use
Aboriginal culturally informed zone	Open space
Multipurpose stadium and associated concourse zone	Open space and commercial
Royal Engineers building and land	Open space and commercial
Complementary integrated mixed use zone, including restraints, cafes, hotels, medical facilities and commercial office space	Open space and commercial
Antarctic facilities zone including commercial spaces and connections with the complementary integrated mixed use zone	Commercial and underground car parking
Residential development and public foreshore zone accommodating a variety of tenures and housing opportunities, along with a new public promenade and food and beverage offerings	Medium to high density residential, commercial and open space
A transport corridor and roadway linking Regatta Point to the main areas of the Site	Open space / vehicle traffic / foot traffic
A vegetated area along the northern boundary of the Site, where the escarpment below the Hobart Cenotaph would prevent development or construction	Open space

Subsurface utilities and maintenance activities are anticipated to occur in all Site areas.

The concept layout of the Site in the Precinct Plan is shown on **Figure F1**.

In addition, as part of development:

- Excavation of the Multipurpose Stadium and Associated Concourse Zone is planned to a final surface elevation of 3 metres Australian Height Datum (mAHD). Additional excavation may occur below this elevation to allow for support structures to facilitate a level playing field without soft patches in the future stadium.
- A single storey underground carpark, with a proposed base at 1.8 mAHD, may be constructed in the Antarctic Facilities Zone.
- Excavation of the north-west corner of the Site to 4.8 mAHD is planned for the construction of practice wickets.
- The Goods Shed will be relocated from the southern area of the Site, to north of the Multipurpose Stadium and Associated Concourse Zone.

2.4 Geology

2.4.1 Regional

The *Engineering Geology Greater Hobart Area, Map 1* (Hofto, 1990), describes the Site as being underlain by a combination of reclaimed land, Quaternary aged sediments and Dolerite of Jurassic age. Micaceous quartz sandstone and white felspathic sandstone and micaceous mudstone of Triassic age are located to the north and west of the Site.

2.4.2 Local (Site-Wide)

The Site has been subject to significant filling from the early 1800s to the 1900s (Austral, 2013) with up to 600 m of land reclaimed from the original 1800s' shoreline. Fill material has been encountered across the Site to depths of up to approximately 12 m bgl.

Fill material has been described as generally containing a combination of clays, sands, gravels, cobbles and bricks. The thickness of fill is variable across the Site (0.2 – 12 m bgl), and generally increases from north to south across the Site consistent with historical land reclamation activities.

Deeper fill material generally consists of silty sands, similar to the underlying natural estuarine/ marine estuarine deposits, indicating that the deeper fill material may be associated with reworked natural material or dredged material.

Two main natural soil types have been encountered at the Site including estuarine/ marine deposits (silty sands) and weathered Dolerite including clays, gravels and cobbles.

Estuarine/ marine deposits have generally been encountered in the south-eastern portion of the Site, ranging in depth from 3.7 – 15.6 m bgl. Weathered Dolerite generally underlays the estuarine/ marine deposits (with the exception of the northern portion of the Site where the estuarine/ marine deposits are absent). Weathered Dolerite has been encountered at near surface to 1.4 m bgl in the northern portion of the Site, and from 11.2 to 19.0 m bgl in the southeastern portion of the Site.

Dolerite bedrock underlies the fill and natural soils at the Site. Dolerite has been encountered at near surface in the northern portion of the Site, and slopes down in a southerly and south easterly direction and has been encountered at depths up to 25 m bgl. The Dolerite has been described as high strength and slightly to highly fractured (Douglas Partners, 2015).

Hunter Island, a bedrock high, is located to the south of the Site and is inferred to influence groundwater flow direction.

The Site is mapped as having a low probability (6-70%) of Potential Acid Sulfate Soils (PASS), as indicated on LISTmap's Coastal Acid Sulfate Soils (CASS) (0 – 20 m AHD) layer. PASS has been detected in saturated estuarine materials beneath the Site, and may potentially be present in some areas of unsaturated fill. An assessment of PASS was included as part of this investigation, as detailed later in **Section 7.4**.

2.5 Hydrogeology

2.5.1 Regional

Groundwater flow is inferred to be in a general easterly direction toward the River Derwent and is encountered in coastal deposits, alluvial sediment, sandstone and in fractured Dolerite [Department of Infrastructure Energy and Resources (DIER), *Southeast Tasmania Groundwater Map*, 2006].

Average groundwater yield generally ranges from 0.77 to 1.24 litres per second (L/s) in the varying aquifer types, and salinity ranges from 70 – 11,200 milligrams per litre (mg/L) (DIER, 2006).

2.5.2 Local (Site-Wide)

The Site is underlain by a single aquifer unit (within multiple lithological units) extending to depths greater than 25.0 m bgl (the maximum depth assessed). Groundwater has generally been encountered in fill material in the central, southern and eastern portions of the Site, extending into underlying natural material including estuarine/ marine deposits, weathered Dolerite and fractured Dolerite.

Based on previous Site-wide GMEs undertaken in 2019 (AECOM, 2020b), the groundwater flow direction in the shallow portion of the aquifer (screened to up to 10 m bgl) was inferred to be generally to the south and southeast, towards the River Derwent and/or Sullivans Cove, with a slight north easterly flow component in the far northern portion of the Site, potentially influenced by the Hobart Rivulet which traverses the northern Site boundary and discharges to the River Derwent to the northeast.

Since 2019, several remediation and re-surfacing activities have been undertaken on-Site which have resulted in significant changes to the Site surface. A recent Site-wide groundwater gauging event was undertaken in February 2025 for accessible and serviceable wells across the Site and surrounding areas, noting several wells were destroyed or otherwise damaged (by Site activities and remediation) and were not suitable for monitoring (AECOM, 2025c). Based on the gauging results from June 2025 discussed in this report, groundwater flow in the shallow portion of the aquifer at the Site was inferred to be generally to the south, with groundwater entering the Site from the east and west, noting groundwater gradients are steeper in the north and relatively flat in the central portion of the Site, consistent with previous investigations. Groundwater elevation contours for shallow groundwater (i.e., wells screened above the top of the aquifer to less than 10 m bgl are shown on **Figure F3** (**Appendix A**).

Evidence of tidal influence on groundwater levels has previously been identified to the south of the Site within the inferred groundwater flow path at MW151, where tidal variation of approximately 0.1 m has been noted. Tidal influence (i.e. increasing standing water level [SWL] variations) has been noted to increase toward Sullivans Cove. Tidal influence was also observed at Regatta Point during the 2025 Regatta Point Detailed Site Investigation (DSI) (AECOM, 2025e).

In June 2025, Total Dissolved Solids (TDS) concentrations for shallow groundwater on Site were generally low (<2,500 mg/L), indicating there was likely limited estuarine/ marine water intrusion on Site within shallow groundwater (<10.0 m bgl), however higher TDS is noted in the northern portion of the Site at Regatta Point (measured up to 28,000 mg/L in MW180), the eastern portion of the Site (measured up to 12,000 mg/L at TW02) and off-Site, to the south (measured up to 20,000 mg/L at MW153) where higher interaction with estuarine/ marine water is inferred to occur (refer to **Table T6a**, **Appendix B**). Marine water intrusion was also observed at Regatta Point during the Regatta Point DSI (AECOM, 2025e).

Hydraulic conductivity testing undertaken on the southern portion of the Site (AECOM, 2016a) has estimated the hydraulic conductivity of the different lithological units as follows:

- Fill Material – 0.52 m/day
- Alluvial/ Marine Deposits – 0.59 m/day
- Slope Deposits – 0.26 m/day
- Bedrock – 5.3 x 10^{-3} m/day.

2.5.3 Groundwater Use

No groundwater is currently in use on Site, or planned for use in future. Use of groundwater at the Site is restricted by the Site Environmental Management Plan (SEMP) (AECOM, 2024b), and is not anticipated to occur for any purpose other than environmental monitoring.

A search of the Tasmanian Groundwater Information Access Portal (https://wrt.tas.gov.au/groundwater-info/) conducted in November 2024 in a 2 km radius surrounding the Site, identified one bore (Feature ID 2864) located approximately 2 km north-north-west of the Site (refer **Appendix D**). This bore, of depth 54 m, was drilled in 1983 by Tasmania Department of Mines, and reported groundwater at 40 m bgl. Based on the age, depth to groundwater, and originator of this bore, distance and direction from the Site, and the presence of reticulated water supply in the Hobart area, it is not considered likely that extractive use of groundwater occurs from this bore, or that groundwater would be affected by Site conditions if extraction is occurring. No other bores were detected within 2 km of the Site.

3.0 Assessment Criteria

3.1 Spatial and Temporal Suitability of Monitoring Networks

The adopted guidance for assessment of the monitoring networks for groundwater and soil vapour are presented below.

3.1.1 Groundwater

Appendix B2 of the ASC NEPM states that the groundwater bore network should cover an appropriate study area to:

- Delineate the lateral and vertical extent of contamination and the groundwater flow system for the geological units of interest
- Assess the risks to relevant receptors.

The appropriate number of bores, locations, depths and screened intervals are noted to be Site-specific. However, the ASC NEPM requires as a minimum:

- One up-gradient bore (per aquifer or geological unit of interest) to establish the quality of groundwater entering the Site.
- Two or three bores to monitor groundwater quality down-gradient and lateral (cross-gradient) to each contaminant source.

Groundwater assessment should also be sufficient to understand any seasonal or longer-term variability in groundwater flow direction and rate of plume advance/retreat.

3.1.2 Soil Vapour

The section of Table 4 of the *Petroleum hydrocarbon vapour intrusion assessment: Australian Guidance* (CRC CARE, 2013) which advises on sample locations for future buildings is shown as **Plate 1** below. This table provides guidance on the quantity and depth of soil vapour bores to assess potential future buildings based on the source of contamination (i.e. LNAPL, dissolved phase or soil contamination).

Scenario Evaluated in PVI Assessment	On-Site Sources						Off-Site Sources (Note 3)			
	LNAPL		Dissolved Phase		Soil		LNAPL		Dissolved Phase	
	Minimum number of locations (Note 1)	Depth (m bgl) (Note 2)	Minimum number of locations (Note 1)	Depth (m bgl) (Note 2)	Minimum number of locations (Note 1)	Depth (m bgl) (Note 2)	Minimum number of locations (Note 1)	Depth (m bgl) (Note 2)	Minimum number of locations (Note 1)	Depth (m bgl) (Note 2)
Assessment of future buildings										
Property access granted - locations should be above maximum concentrations and relevant to location of proposed building										
small building and building with crawl-space	2	1.5	2	1.5	1 (or number of soil sources)	1.5 **	2	1.5	2	1.5
big building or size not known *	3	3	3	3		3 **	3	3	2	3
building with basement to depth X	3	X	3	X		X	3	X	3	X

Notes for Table 4:

Note 1 The sampling locations and number of samples collected should be based on the CSM, in particular the extent of the contamination and location of receptors (where there is the potential for human exposure). As PVI assessments are commonly undertaken based on maximum impacts the locations should focus on areas of maximum impact in groundwater and/or vadose zone. The maximum number of samples that may be appropriate for a site will depend on the nature and extent of contamination, building size and if there are any requirements to calculate statistics. Where the building size (or continuous slab) is large, targeting a location in the middle of the slab (or where oxygen migration is expected to be limited) is recommended wherever possible. It is expected that for most sites no more than 6 sample locations are required per receptor building.

Note 2 The depth of samples required assumes that the groundwater contamination or LNAPL is below these depths. Where more shallow groundwater or LNAPL is present then the samples should be collected as close as practical to the source\groundwater table (above the capillary fringe). It is also noted that the minimum depths presented in this table are those required to be collected and considered in the PVI assessment. Additional depths may be included (as nested wells at each location) to demonstrate biodegradation (where relevant). The relevance of additional depths depends on the CSM (and in particular the potential presence of large slabs/buildings to affect the potential for biodegradation). For example, a soil vapour sample at 0.5m in open ground on which a house with a crawl space will be constructed is relevant to assess if biodegradation has occurred sufficiently, however, such a sample is not relevant if a large slab is to be constructed on the site. If the slab size is not of importance to the potential for biodegradation (refer to **Appendix B2**) then it may be relevant to installed nested wells that include more shallow wells (e.g. 1.5 m and 0.5 m depths). If the slab size is of potential importance (refer to **Appendix B2**) and may affect the potential for biodegradation then nested wells may be installed, for example, to A) also collect vapour data near the source to enable the refinement of the decision that slab size is important; B) also collect data closer to the surface (i.e. 0.5 m and/or 1.5 m depth) so that if sufficient evidence is provided that the slab size is not of importance data is available to support biodegradation; C) define the vertical extent/processes at and below a proposed basement depth (particularly where the source is deep. Examples of nested wells in these situations may be 5 m, 3 m and 1.5 m depths; or adjacent to source at 4 m, 3 m and 1 m. Note that where a building with a basement extends into (or is proposed to extend into) the groundwater source, the collection of soil gas data will not assist in the assessment of PVI risks (refer to **Section 5.2**).

Note 3 The number of sample locations presented relate to a single property or two neighbouring/adjacent properties (with equal potential for PVI risk). The number of off-site properties that require consideration will depend on the CSM and the determination of the zone of influence. It is expected that as a minimum, off-site properties closest to the site (where off-site concentrations are highest) will be evaluated unless PVI risks are screened out as per **Section 4**.

* Building/slab size that is of importance should be determined on the basis of site specific information and the approach as outlined in **Appendix B2**. Note that this is based on a continuous slab. The presence of gaps (such as those that are present between different/adjoining slabs), pavers, or garden beds provides sufficient pathways for oxygen to migrate beneath pavements and should not be included in the consideration of a continuous slab.

** Depth of sample targeting soil contamination should be as recommended or at the depth of the soil contamination.

ss Sub-slab soil gas sample

\# While it is preferred that sub-slab data is collected from beneath an existing building, it is recognised that even when building access is available the collection of a sub-slab sample may not always be possible or practical to collect. In this situation the collection of soil gas samples directly adjacent to the building at depths as outlined under the category of no building access should be considered.

Plate 1 Potential Vapour Intrusion (PVI) Assessment for Future Buildings (CRC CARE, 2013)

Margin of Safety (MOS) is identified in CRC CARE, 2013 as a guidance source to assess a suitable number of soil gas monitoring rounds that is required based on the soil gas concentration relative to the relevant screening level guideline.

MOS is calculated using the method shown on **Plate 2** below, while **Plate 3** shows the suggested monitoring frequency based on the calculated MOS.

$$MOS = \frac{[\text{relevant screening level guideline}]}{[\text{soil gas concentration}]} \text{ OR } \frac{[\text{target risk}]}{[\text{calculated inhalation risk}]}$$

Plate 2 Margin of Safety (Source: CRC CARE, 2013)

Soil Gas Results	Number of sampling rounds or other actions required
MOS > 10 and CSM/ lines of evidence[1]	1 sampling event (with sound QA/QC) is adequate.
MOS >10 and limited supporting CSM/lines of evidence[1]	2 sampling events (with sound QA/QC) required over different conditions depending on CSM (e.g. seasons, depth to groundwater).
MOS >1 and <10	2-3 sampling events (with sound QA/QC) required over a minimum of 2 different conditions depending on CSM (e.g. seasons, depth to groundwater).
MOS >0.1 and <1	3-4 sampling events (with sound QA/QC) required over a minimum of 2 different conditions depending on CSM (e.g. seasons, depth to groundwater).
MOS < 0.1	Risk mitigation required to be considered/implemented (any additional sampling should be validation sampling). An additional confirmation round of sampling may be undertaken to assist in this process.

[1] CSM/lines of evidence – the understanding of the situation at the site (including evaluation of data that supports biodegradation) adds weight to the conclusions from the soil gas sampling

Plate 3 Number of Sampling Rounds or Other Actions Required by MOS (Source: CRC CARE, 2013)

3.2 Tier 1 Screening Criteria

Protected Environmental Values (PEVs) are defined in Clause 4.1 of the Tasmanian Government *State Policy on Water Quality Management* (1997) (the SPoWQM) as:

…the value or use for which it has been determined that a given area of the environment should be protected. There can, and often will be, more than one protected environmental value for a given area.

PEVs applicable at the Site, and the adopted criteria to assess if these are precluded, are defined in **Section 3.2.1** and **3.2.2** below. Tier 1 criteria have been adopted to assess if these PEVs are precluded, in the absence of mitigation or management measures.

While some PEVs may be theoretically precluded based on Tier 1 criteria, risk-based assessment for human health has been further undertaken using the Site specific Remediation Criteria (RC) (**Section 3.3**). Assessment of potential impacts to off-Site ecological receptors was undertaken in 2020 (AECOM, 2020a), and reviewed with new data, including data collected as part of this assessment, in 2025 (AECOM, 2025g)

3.2.1 Soil

In the absence of specific Tasmanian guidance regarding the PEVs of land, the Victorian Environment Reference Standard (the ERS), (EPA Victoria, 2022) has been referenced to identify potential PEVs at

the Site relating to land. The ERS replaces and supersedes Victorian *State Environment Protection Policy - Prevention and Management of Contamination of Land* (PMCL SEPP), which has been previously used in assessment of the Site.

The proposed development of the Site includes retail, commercial, and open space uses. No natural ecosystems are present on the Site, and based on the urban setting and the current and proposed future uses of the land, production of food, flora, and fibre are not considered likely to occur and are not considered as PEVs under the Victorian framework adopted.

As such, the following PEVs are considered relevant for the Site.:

- Land dependant ecosystems and species - Modified and Highly Modified Ecosystems
- Human Health
- Buildings and Structures
- Aesthetics.

A summary of the adopted assessment criteria for each land PEV is provided in **Table 5**.

Table 5 Adopted Tier 1 Screening Criteria - Soil

Protected Environmental Value		Adopted Assessment Criteria	Rationale
Land Dependant Ecosystems and Species	Modified Ecosystems	• ASC NEPM (2013) EIL, Urban residential and public open space • ASC NEPM (2013) ESL, Urban residential and public open space (coarse soil type) • PFAS NEMP (2025) – Ecological Indirect Exposure, intensely developed Sites	• No terrestrial ecological receptors are currently present at the Site and it is unlikely that they will be present following development as the Site will be finished with hardstand. • For the purpose of assessing all PEVs, ecological screening criteria have been adopted. It is noted that EILs and ESLs apply to the top 2 m of soil. As no existing ecologies exist on the Site, and maintenance of a surface layer (covering >75% of the Site surface) is included as a requirement of the SEMP, PFAS soil criteria for ecosystem protection have been adopted for indirect contact, and modified to 0.14 mg/kg. • Ambient background concentration (ABC) has been conservatively excluded from ecological criteria.
	Highly Modified Ecosystems	• ASC NEPM (2013) EIL, Commercial and Industrial • ASC NEPM (2013) ESL, Commercial and Industrial (coarse soil type) • PFAS NEMP (2025) – Ecological Indirect Exposure, intensely developed Sites	
Human Health		**Low Density Residential** • ASC NEPM (2013) HIL A • CRC CARE (2011) Vapour Intrusion HSL A (Sand) • US EPA RSLs (2020) • CRC CARE (2011) Direct Contact HSL A (for soil <1.0 m bgl) • PFAS NEPM (2025) HIL A **Medium/High Density Residential** • ASC NEPM (2013) HIL B • CRC CARE (2011) Vapour Intrusion HSL B (Sand) • US EPA RSLs (2020)	• Soil HSLs for vapour intrusion and direct contact for TRH fractions have been developed based on typical petroleum mixtures. HSLs cannot be applied to non-petroleum sources such as pure solvents or gasworks wastes, which have significantly different composition to petroleum mixtures. The HSL (infinite) values presented in Appendix F of CRC CARE, 2011 have been adopted in accordance with CRC CARE guidance because these do not

Protected Environmental Value	Adopted Assessment Criteria	Rationale
	• CRC CARE (2011) Direct Contact HSL B (for soil <1.0 m bgl) • PFAS NEPM (2025) HIL B **Recreation/Open Space** • ASC NEPM (2013) HIL C • CRC CARE (2011) Vapour Intrusion HSL C (Sand) • US EPA RSLs (2020) • CRC CARE (2011) Direct Contact HSL C (for soil <1.0 m bgl) • PFAS NEPM (2025) HIL C **Commercial/Industrial** • ASC NEPM (2013) HIL D • CRC CARE Vapour Intrusion HSL D (Sand) • US EPA RSLs (2020) • CRC CARE (2011) Direct Contact HSL D (for soil <1.0 m bgl) • PFAS NEPM (2025) HIL D **Shallow Trench Worker** • CRC CARE (2011) Vapour Intrusion Shallow Trench Worker (Sand: 0-<2m) • CRC CARE (2011) Direct Contact Shallow Trench Worker (for soil < 1.0 m bgl)	depend on assumptions regarding the mixture composition. • While it is noted that petroleum products do exist at the Site, given the varying types of hydrocarbon impact (i.e. gasworks, diesel, and petrol) the HSL infinite values have been adopted to allow assessment of a range of potential hydrocarbon sources. • Fill material consists of sand, clays, gravels and rubble. For the purpose of screening the vapour intrusion pathway, as a conservative approach, sand has been selected as the predominant material type. • All soil samples have been screened against CRC CARE Vapour Intrusion criteria for the relevant depths the samples were collected from. • In accordance with ASC NEPM (2013), direct contact criteria have been applied to the top 3 m of soil. If deeper soils are disturbed during civil works the material will need to be placed back at the depth that it was excavated or classified for reuse.
Buildings and Structures	• Australian Standards Pilling – Design and Installation (AS 2159-2009)	• Contamination must not cause the land to adversely affect the integrity of structures and building materials.
Aesthetics	• ERS • NEPM Management Limits	• Aesthetic issues, including the quantity, type and distribution of foreign materials or odours, must not adversely affect the use of the land.

Notes: HSL – Health Screening Level; HIL – Health Investigation Level; ESL – Ecological Screening Level; EIL – Ecological Investigation level; CEC- Cation Exchange Capacity; AS 2159-2009 – Australian Standard, Piling – Design and installation; CRC CARE – Corporative Research Council for Contamination Assessments and Remediation of the Environment; US EPA RSLs – United States Environmental Protection Agency Regional Screening Levels, November 2020; NEMP - PFAS National Environmental Management Plan Version 2.0 - January 2020.

3.2.2 Groundwater

The PEVs of groundwater which are identified for Tasmanian waters in the SPoWQM are:

- Drinking Water
- Irrigation
- Industry
- Stock
- Ecosystem Protection

Table 6 below identifies PEVs on the basis of groundwater TDS concentrations.

Table 6 Protected Environmental Values of Groundwater (SPoWQM, 1997)

Protected Environmental Values	Groundwater TDS Category (mg/L)			
	A Less than 1,000	B 1,000 – 3,500	C 3,500 – 13,000	D >13,000
Drinking Water	✓			
Irrigation	✓	✓		
Industry	✓	✓	✓	
Stock	✓	✓	✓	
Ecosystem Protection	✓	✓	✓	✓

Notes: ✓ - Denotes a PEV which can be achieved given the level of dissolved solids

Laboratory-analysed TDS in Site groundwater recorded during this sampling event ranged between 170 and 28,000 mg/L, with an average value of 2,095 mg/L and a median of 840 mg/L (refer to **Table T6a**, **Appendix B)**. Based on these results, Site groundwater has been conservatively assessed as Category A, and all PEVs have been considered.

In addition to the above-mentioned groundwater PEVs, recreation (primary and secondary contact), aesthetics, buildings and structures, and human health (via the vapour intrusion pathway) have also been considered as PEVs for the Site.

The assessment criteria adopted as Tier 1 screening criteria for groundwater PEVs are provided on **Table 7** below.

Table 7 Adopted Tier 1 Screening Criteria - Groundwater

Protected Environmental Value	Adopted Assessment Criteria	Rationale
Drinking Water	• NHMRC Australian Drinking Water Guidelines (amended 2025) Aesthetic • NHMRC Australian Drinking Water Guidelines (amended June 2025) Human Health. • PFAS NEMP (2025). It is noted that recent June 2025 updates to the NHMRC Australian Drinking Water Guidelines for PFAS compounds supersede the PFAS NEMP 3.0 (2025) criteria where applicable. Where no NHMRC guideline values are available, screening values have been adopted from the following sources: • WHO (2017) Guidelines for Drinking-Water Quality: Fourth Edition Incorporating the First Addendum • US EPA RSLs (2020) Tap Water Quality •	• Whilst it is noted that groundwater at the Site is unlikely to be extracted for drinking water purposes, this PEV has been conservatively considered.
Irrigation	• ANZECC (2000) Short Term Trigger Values (STVs) for Irrigation Water	• STVs have been adopted on the basis of the surrounding land use, where ongoing irrigation of plants and garden beds is unlikely to occur. STVs can be tolerated for up to 20 years of irrigation.
Industry	• Due to the wide and varied potential industrial uses of groundwater, water quality requirements for use in industrial processes are assessed on an industry-specific basis. As such, no Tier 1 criteria for use of groundwater by industry have been adopted for this assessment.	• Groundwater at the Site is unlikely to be used for industrial purposes. In the absence of any standard or reliable criteria to apply for this PEV without a specific planned industrial use, this PEV has not been considered.
Stock	• ANZECC (2000) Livestock Drinking Water Quality	• Based on the Site setting, it is unlikely that groundwater would be used for stock watering purposes. However, for the purpose of assessing this PEV, the ANZECC (2000) guidance has been adopted.

Protected Environmental Value	Adopted Assessment Criteria	Rationale
Ecosystem Protection	• ANZG (2018) 90% level of ecosystem protection (marine water) • ANZG (2018) 95% level of ecosystem protection (marine water) for bioaccumulative CoPC • The PFAS NEMP (2025) Interim Marine 95% (slightly to moderately disturbed) level of ecosystem protection (interim marine) Where no high reliability guideline values are available in ANZG (2018), screening values have been adopted from the following sources: • ANZG (2018) low to moderate reliability trigger values (marine) • ANZG (2018) 90% level of ecosystem protection (marine water) draft guidelines released for public comment on 29 June 2020. • US EPA (2013) Ambient Water Quality Criteria (chronic – Marine) • US EPA (2006) Region 3 Mid-Atlantic Biological Technical Assistance Group (BTAG) Screening Benchmarks (marine). • There are currently no relevant Australian guidelines for TRH/TPH in groundwater. Therefore, for the purpose of this assessment, the RIVM (2001) Dutch Intervention Values (DIV) for TRH/TPH have been adopted. It is noted that risk from petroleum hydrocarbon mixtures are screened based on the individual risk-driving compounds (BTEX, PAH) under ANZG (2018) marine water criteria as listed above.	• The nearest surface water ecosystems that may receive groundwater discharge, i.e. River Derwent and Sullivans Cove, would be characterised as a moderately to highly disturbed (i.e. active port area) marine environment according to the ANZECC (2000) definitions. As such, the assessment criteria based on 90% level of ecosystem protection (marine) have been adopted, with the exception of identified bioaccumulative CoPC where the 95% level of ecosystem protection (interim marine) has been conservatively adopted, consisting of: - PFAS - Mercury - PAHs (anthracene, phenanthrene, fluoranthene, and benzo(a)pyrene)
Recreation (Primary Contact)	• NHMRC (2008) Guidelines for Managing Risk in Recreational Water • PFAS NEMP (2025)	• NHMRC (2008) recommends applying Australian Drinking Water Guidelines - *Health* (NHMRC, 2018), adjusted for a 10 fold decrease in ingestion of water.
Recreation (Secondary contact)		• Primary Contact Recreation criteria have been conservatively adopted to assess secondary contact.
Aesthetics	• NHMRC Australian Drinking Water Guidelines (amended 2018) Aesthetic	• This may relate to aesthetic issues associated with the presence of objectionable odours, colours, taints, visible floating material, foam, oil or grease or ‘dirty’ water.

Protected Environmental Value	Adopted Assessment Criteria	Rationale
Buildings and Structures	• Australian Standard (AS) 2159 – 2009	• Building and structures assessment is on the basis of concrete piles in a mild exposure classification scenario in high permeability soils. • In addition to a pH of 5.5, sulphate and chloride concentrations of 1,000 mg/L and 6,000 mg/L respectively has been adopted to assess potential impacts to concrete piles.
Human Health - Vapour Intrusion	CRC CARE (2011) Groundwater Health Screening Levels (HSLs) for vapour intrusion including: • Residential - HSL A/B (sand, depth to groundwater 2.0 – <4.0 m bgl) • Recreation/ Open Space - HSL C (sand, depth to groundwater 2.0 – <4.0 m bgl) • Commercial/ Industrial - HSL D (sand, depth to groundwater 2.0 – <4.0 m bgl) • Intrusive Maintenance Worker- HSL: (sand, depth to groundwater 2.0 – <4.0 m bgl) The British Geological Survey (BGS) (UKRI, 2024) value for assessing the explosive hazard risk of methane intrusion from groundwater has been adopted as a screening value.	• Groundwater HSLs for vapour intrusion for TRH fractions have been developed based on typical petroleum mixtures and consider the solubility limits of petroleum mixtures. HSLs cannot be applied to non-petroleum sources such as pure solvents or gasworks wastes, which have significantly different composition to petroleum mixtures. The HSL (infinite) values presented in Appendix F of CRC CARE, 2011 have been adopted in accordance with CRC CARE guidance because these do not depend on assumptions regarding the mixture composition. • HSLs associated with depths to groundwater of between 2.0 and <4.0 m bgl in sand lithology were selected to assess groundwater analytical results on the basis of the depth to water of approximately 2 m bgl across the Site. • The BGS methane criteria assumes all methane in water will outgas to form an explosive atmosphere.

3.2.3 Soil Vapour

For the purpose of assessing the risks posed to current and future human-health based on the proposed future land uses by Potential Vapour Intrusion (PVI), analytical results will be compared against the residential, recreation/open space and commercial screening criteria provided on **Table 8** below.

Table 8 Adopted Tier 1 Screening Criteria – Soil Vapour

Adopted Assessment Criteria	Rationale
CRC CARE HSLs, 2011 (Appendix F)	• Vapour concentrations will be assessed against residential (HSL A/B), recreation/ open space (HSL C) and commercial (HSL D) criteria. • Fill material consists of gravels, and cobbles and sand, and as such, sand has been conservatively selected as the predominant material type. • TRH HSLs cannot be applied to non-petroleum sources such as pure solvents or gasworks wastes, which have different ratios of aromatic and aliphatic hydrocarbons. While LNAPL Plume B is sourced from a petroleum source, given the potential for gasworks wastes to be present in Audit Area 3 as a result of land reclamation, the HSL (infinite) values presented in Appendix F of CRC CARE (2011) will be adopted in accordance with CRC CARE guidance as a conservative approach. • It is noted in Section 9 of CRC CARE (2011) that vapour intrusion in high-density residential buildings is based on occupation of the ground floor, and HSL-B should be applied only if residents occupy ground floor apartments. If the ground floor consists of commercial properties or the building contains a communal basement carpark, HSL-D will be used.
CRC CARE (2013) Action Levels for Subsurface Methane near foundations	Methane detections in soil bores and sub-slab vapour wells will be compared against the action levels for subsurface methane near foundations provided in CRC CARE (2013).

Results of air samples will be assessed against the adopted criteria and Margin of Safety (MOS) assessment, as discussed in *Technical Report 23 - Petroleum hydrocarbon vapour intrusion assessment: Australian Guidance* (CRC CARE, 2013) will be undertaken to determine if a suitable number of monitoring rounds has been undertaken based on concentrations versus adopted criteria.

3.3 Remediation Criteria

AECOM has derived Site-specific Remediation Criteria (RC) in order to inform remediation and management works required at the Site for the protection of human health (AECOM, 2016b). Review of the RC for the updated proposed development of the Site conducted in 2025 (AECOM, 2025f) concluded that the AECOM (2016b) RC are appropriate for assessment of potential human health risks which may arise from the land uses proposed in the Precinct Plan (MPDC, 2024).

Potential risks to ecological receptors were not considered in the RC and have been separately assessed AECOM (2020a) and AECOM (2025g), noting that the only potential ecological receptors identified for the Site are off-Site aquatic receptors via groundwater migrations. AECOM (2020a) concluded that, based on multiple lines of evidence, Site groundwater was not likely to represent any unacceptable risk to off-Site ecological receptors.

The RC consider the following scenarios and land uses based on the initially proposed development of Macquarie Point (MPDC, 2015), which are considered applicable to the currently proposed future development based on the review of RC (AECOM, 2025f)*:*

- High density residential development (slab-on-grade buildings and buildings with a communal basement car park)
- Recreation / open space

- Multi-storey car park
- Commercial/light industrial (slab-on-grade buildings and working within a basement car park).

The risk-based Site RC are derived based on generic, conservative exposure assumptions protective of on-Site and off-Site human health under the above-mentioned potential future land use conditions at the Site, and incorporated the following key assumptions:

- NAPL impacts at the Site will be remediated to the extent practicable and therefore risks associated with exposure to NAPL, and volatile contaminants derived from NAPL were not considered in the derivation of the RC. Risks from residual NAPL present at the Site have been assessed separately (AECOM, 2021b), however, the outcomes of the AECOM, 2021b report will be further informed and updated as required, based on additional data collected as part of this investigation.
- Intrusive maintenance work at up to 1 m bgl may be undertaken in all land uses.
- An engineered break layer will be present at the ground surface to mitigate the potential for future Site users (with the exception of maintenance workers) to have direct contact with soils.
- A reticulated water supply will be available, based on the urban setting of the Site, and abstraction of groundwater for any purposes other than remediation or monitoring, or temporary extraction during construction, will not be required. Potential exposure to contaminants in groundwater during any construction, remediation, or monitoring will be managed by task specific safety documentation informed by the SEMP.
- A Site Environment Management Plan will be prepared and put in place to maintain/manage surface cover.
- With regard to basements:
    - Use of any future basements is assumed to be limited to car parking. If basements are constructed for other purposes, a risk assessment specific to the intended use should be conducted.
    - Where basements are associated with future residential or commercial buildings, it is assumed that these will be communal areas for multiple properties, for example, as part of a strata scheme that is managed by a body corporate. Private basements will therefore not be associated with individual residences.
    - Where there is access to a basement car park, it is assumed that any groundwater seepage collects in floor drains and a physical barrier is present, and therefore, groundwater will not be directly contacted by basement users, with the exception of maintenance workers. It is assumed that individual tenants will not be involved in the maintenance of any associated services, including drainage pumps or sumps.
- For potential future multi-storey car park users, the most sensitive receptor in this scenario would be considered to be a parking attendant present at the Site for a typical eight hour working day. It is considered that RC derived for potential future commercial/light industrial workers (working within a basement) would be protective of all other basement users. This includes multi-storey car park users and residential tenants who access basement car parks and are likely to have lower frequency and duration of exposure, therefore the multi-storey car park users scenario is not evaluated separately in this assessment.
- Adjacent off-Site land uses include open space, commercial/industrial, and residential areas. As these potential land uses have been considered on-Site, the derived RC are considered to also be protective of potential exposures to off-Site receptors (e.g. via groundwater migration beyond the Site boundary), as:
    - Extractive groundwater use is not known to occur within 2km of the Site, based on review of registered groundwater bores undertaken (refer to **Section 2.5.3**), and the urban setting and reticulated water supply indicate that groundwater extraction and use is unlikely to occur

  - No basements are known to be present in the surrounding buildings, and are considered unlikely due to the additional costs which would be required for basement construction, based on shallow groundwater elevation, hydraulically downgradient of the Site.

- It is considered that potential exposure to workers undertaking remediation and/or development activities can effectively be mitigated through the implementation of an appropriate Construction Environmental Management Plan (CEMP). The CEMP should be prepared during the planning stage for any future remediation and/or development activities.
- A separate assessment of the potential risks to on-Site visitors was not undertaken as it was considered that the chronic exposure duration assessment of commercial/light industrial workers or residents is sufficiently protective of the shorter exposure duration visitor scenario.

These assumptions, including controls and requirements for future development, are currently documented as requirements of the Site Environment Management Plan (the SEMP) (AECOM, 2024b), and should be maintained in this document.

3.4 Acid Sulfate Soil

3.4.1 pH Field Screening

Field screening of soil pH will be undertaken as a preliminary detection method for ASS and PASS to allow selection of appropriate locations for quantitative laboratory analysis, and reported the following outputs:

- Field pH (pH_F)
- Oxidised field pH (pH_{FOX})
- Reaction rate, a qualitative rating of how vigorously samples react to peroxide, as described in the *National acid sulfate soils sampling and identification methods manual* (Sullivan et al, 2018)
- The difference between pH_F and pH_{FOX} (ΔpH) is also an important indicator of possible levels of unoxidized materials present in samples.

Appendix B of the *Tasmanian Acid Sulfate Soil Management Guidelines* (the TASSMG) (DPIPWE, 2009) identifies a combination of three factors which are considered to result in a positive field sulfide identification:

- A reaction with hydrogen peroxide
- A high ΔpH
- The actual value of $pH_{FOX.}$

TASSMG also noted that pH field screening is considered indicative only and not quantitative or suitable to rely upon for definitive identification of ASS or PASS, or determination of management requirements. Any results of pH field screening must be confirmed with quantitative laboratory analysis.

3.4.2 CRS and SPOCAS

The action criteria for coarse texture material from Appendix B of the TASSMG will be conservatively adopted for assessment of Actual Acid Sulfate Soil (AASS) or PASS from Chromium Reducible Sulfur or Suspension Peroxide Oxidation Combined Acidity and Sulfur (SPOCAS) analytical results, as soil beneath the Site generally consisted of sand or clay with sand/silt inclusions. Based on the proposed development plans, the criteria for >1,000 tonnes of soil disturbed have been adopted.

The adopted ASS action criteria are:

- Sulfur trail ≥ 0.03 %S oxidisable
- Acid trail ≥ 18 mol H+/tonne.

3.5 NAPL

3.5.1 LNAPL Remediation Endpoints

LNAPL has been historically detected at the Site in four areas – LNAPL Plumes A1, A2 and B, and former LNAPL Plume A3, as described in **Section 2.2.1**.

Remediation of LNAPL was previously undertaken between 2000 and 2001 (prior to the formation of, and control of the Site by, the Corporation) and 2015 and 2017. The *LNAPL Remediation Action Plan* (RAP) (AECOM, 2017) was prepared to provide a framework and methodology to remove LNAPL from the Site, and defined three end-points whereby LNAPL remediation would no longer be practicable, consisting of:

1. LNAPL recovery rates have reached asymptotic levels, and demonstrate marginal recovery rates, such as less than 5% of initial recovery volumes. Further recoverability of residual LNAPL is demonstrated to be impractical within the constraints of the adopted technology, reasonable timeframes and with consideration of the net environmental benefit.
2. The residual LNAPL plumes are shown to be stable or decreasing, including demonstration that LNAPL is not observed in wells where LNAPL has historically been absent.
3. No unacceptable risks to current and future human-health or environmental receptors based on the proposed future land uses.

3.5.2 LNAPL Mobility

LNAPL Plumes A1, A2 and B, and former LNAPL Plume A3 are present on aquifers in fill material in the central and south-eastern portions of the Site. Based on the recorded lithology, perched or confined conditions are not considered likely to be present, and as such, LNAPL mobility will be assessed by one of the following methods:

- If sufficient (>0.15 m) LNAPL is present in a well, an LNAPL baildown test will be conducted and LNAPL transmissivity calculated using the American Petroleum Institute (API) *LNAPL Transmissivity Workbook: A Tool for Baildown Test Analysis* (2012).

  Evaluation of LNAPL Remediation Technologies for Achieving Project Goals (ITRC, 2009), notes that in previous observed operating hydraulic and pneumatic remediation systems, LNAPL transmissivity has generally been reduced to between 0.009 to 0.074 m^2/day at the point at which there has been assessed further LNAPL recovery will generally be inefficient, will take long periods to marginally affect LNAPL transmissivity, and will have little benefit in terms of reduction of LNAPL mass, migration potential, or longevity of the plume.

- If insufficient LNAPL is present for baildown testing, LNAPL will be removed from the well and rebound recorded after 24 hours have passed. LNAPL mobility will be qualitatively assessed on the criteria presented in **Table 9** below.

Table 9 Qualitative LNAPL Mobility Assessment

Rebound after 24 Hours	LNAPL Mobility
>80%	Potential to be mobile
20-80%	Low potential to be mobile
<20%	Unlikely to be mobile

Qualitative assessment of rebound will also consider other factors such as the accuracy of interface probes at low thicknesses and potential residual LNAPL in the packing sand surrounding the well which may not be able to be removed by bailing in a short time period.

3.5.3 Solubility

Groundwater concentrations of TRH and BTEXN can form a line of evidence for the presence/absence of NAPL (either LNAPL or DNAPL), even if not directly observed in groundwater extracted or by field measure such as an oil/water interface probe.

In order to assess the presence or absence of free-phase NAPL in groundwater, the following criteria have been adopted:

- The ASC NEPM provides solubility limits for typical petroleum hydrocarbon mixtures on Table 1A(4), as part of the derivation of HSLs. These limits have been calculated for fuel hydrocarbons and are not considered applicable to other hydrocarbon sources (i.e., gasworks wastes in the Gateway area of the Site).
- CRC CARE (2011) provides solubility limits for pure substances as part of derivation of HILs. In the absence of specific solubility limits for identification of DNAPL (i.e., gasworks impacts), the pure substance solubilities have been used in assessment of groundwater in former gasworks areas of the Site (the Gateway).

4.0 Data Quality Objectives

The *National Environment Protection (Assessment of Site Contamination) Measure 1999* (ASC NEPM, Schedule B [2]) *Guideline On Site Characterisation* [as amended 2013], specifies that the nature and quality of the data produced in an investigation will be determined by the Data Quality Objectives (DQOs). As referenced by the ASC NEPM, the DQO process is detailed in the United States Environmental Protection Agency (US EPA) *Guidance on Systematic Planning Using the Data Quality Objectives Process* (2006a), EPA QA/G-4 (EPA/240/B-06/001).

The seven-step process of establishing appropriate DQOs as defined by the US EPA and the approach adopted relative to these seven steps is presented in **Appendix F**. The DQO process was used for the development of the fieldwork program during the preparation of the Sampling and Analysis Quality Plan (SAQP) to address Quality Assurance/Quality Control (QA/QC) measures adopted during the project.

4.1 Quality Assurance / Quality Control

A QA/QC program was developed to confirm that data collected are sufficiently accurate, precise and reproducible for the purposes of the assessment program. The objective of the QA/QC program is to provide an assessment of the reliability of the data presented for interpretation. **Table 10** below summarises the QA/QC for this investigation.

Table 10 Aspects of the QA/QC Program

Aspect	Description
Use of Experienced Personnel	Field work was undertaken by trained AECOM personnel with previous experience in contaminated Site assessment. Field personnel were familiar with: • Field sampling techniques • AECOM and Site-specific health and safety protocols.
Field Methodology	Field activities were conducted in accordance with the procedures provided in SAQP (AECOM, 2025d).
Equipment Calibration	Where applicable, field equipment were calibrated daily prior to use in the field. Certificates of calibration in accordance with manufacturer requirements were provided from equipment suppliers as part of hire/procurement.
Record Keeping	Date, field personnel details, observations and findings of field activities including (but not limited to) service clearance, soil logging, soil sampling, groundwater level and water quality measurements, groundwater sampling, and equipment calibration details were recorded on project-specific data sheets.
Sample Collection	Non-dedicated sampling equipment (e.g. trowel, groundwater sampling pump, water level meter and water quality meter) were decontaminated prior to mobilisation to Site and between sampling locations. Dedicated sampling equipment (e.g. tubing, filters, sample containers) were used for the collection of soil, groundwater and QA/QC samples.
Duplicates	Field duplicate (inter and intra-laboratory) samples will be collected at a rate of one each for every 20 primary samples, for each sample media, with the exception of: • Field duplicates of PFAS samples were collected at a rate of one every 10 primary samples, in accordance with the PFAS NEMP (HEPA, 2025). • No duplicate samples were collected for ASS samples. pH Field Screening is qualitative and no duplicate samples will be collected. Data quality of CRS analysis will be assessed by an alternative analytical method (SPOCAS) at a rate of one SPOCAS per 10 CRS analyses conducted.
Sample Labelling	A unique sample identification number was used for each sample to specify the sample origin (monitoring well number and date).

Aspect	Description
Chain of Custody	Standard AECOM Chain of Custody (CoC) procedures were adopted for sample transfers. CoC documentation includes sample numbers; date of sampling/ collection; analyses required; and release and receipt of parties accepting sample custody.
Sample Storage	Samples were collected in appropriate sample containers supplied by the analytical laboratory. Where required, sample containers were prepared with preservation solutions based on the analyte of interest. Samples were placed in cool storage prior to transfer to the laboratory. ASS samples were transferred to the analytical laboratory or frozen on-Site within 24 hours of collection.
Decontamination	All non-dedicated field equipment used in the sampling process were subject to appropriate decontamination procedures, generally consisting of a non-phosphate detergent solution (Liquinox 90) wash followed by a deionised, distilled, or clean water rinse. The decontamination procedures were performed prior to first use on-Site and between each sampling location. It is assumed that portable equipment hired from environmental equipment suppliers were received in clean and workable condition.

The quality of the data collected were assessed on a range of factors including:

- Documentation and data completeness
- Reference to relevant guidance documents
- Consistency of methodology
- Data quality including comparability, representativeness, and accuracy for data collection and analysis.

4.1.1 Data Quality Indicators

The Data Quality Indicators (DQIs) adopted to assess the precision and accuracy of the data include are as follows:

- Assessment of the reproducibility of the data by calculation of the Relative Percent Difference (RPD) for laboratory and field duplicate samples. This will provide an indication of the precision and accuracy of the data. The RPD is calculated from the absolute difference between results of the duplicate pair divided by the mean value of the duplicate pair as presented below:

  RPD (%) = 100 x (D1-D2) / ((D1+D2) / 2)

  Where: D1 = primary sample analysis

  D2 = duplicate sample analysis
- Assessment of the analytical results for laboratory quality control samples. This will provide an indication of the accuracy of the data.
- Collection of rinsate blanks (at a rate of one per day of sampling, per set of sampling equipment) to provide an indication of accuracy related to potential for cross contamination of samples during sampling.
- Collection of field blanks (at a rate of one per day of sampling) to assess ambient conditions during sampling. Field blanks will be kept on hold unless rinsate results report detections above the laboratory LOR.
- Analysis of trip blanks (at a rate of one per esky) to provide an indication of accuracy related to potential for cross contamination of samples during transport.

Assessment criteria for data quality indicators for sampling undertaken during the investigation are listed below in **Table 11**.

Table 11 Acceptance Criteria for Data Quality Indicators

Data Quality Indicator	Acceptance Criteria
Rinsate blanks	Less than the laboratory limit of reporting (LOR)
Intra and inter laboratory field duplicates (1)	RPDs less than: • 30% for high level laboratory duplicates (i.e. >20 x LOR) • 50% for medium level laboratory duplicates (i.e. 10 to 20 x LOR) • 200% for low level laboratory duplicates (i.e. 1 to 10 x LOR)
Trip blanks	Less than the laboratory LOR
Field blanks	Less than the laboratory LOR
Laboratory duplicates (2)	RPDs Less than: • 20% for high level laboratory duplicates (i.e. >20 x LOR) • 50% for medium level laboratory duplicates (i.e. 10 to 20 x LOR)
Matrix spikes (3, 4)	Recoveries between 70-130% of the theoretical recovery
Method blanks	Less than the laboratory LOR
Laboratory control samples (4)	Recoveries between 70-130%.
Surrogate spikes	See Note 5

Notes:

1. *Potential exceptions to these criteria may occur where the concentrations are close to the LOR. This typical RPD range is obtained from AS 4482.1-2005 Guide to the investigation and sampling of Sites with potentially contaminated soil. Variation can be expected to be higher for organic analysis than for inorganics.*
2. *If the concentrations are close to the LOR, then higher RPDs may be accepted. Variation can be expected to be higher for organic analysis than for inorganics (AS 4482.1-2005).*
3. *Assumes that samples are homogeneous and the background analyte level is less than 20% of the spike level (refer to USEPA Method 8000B). Note that there is no requirement for matrix spikes to pass as certain matrices may preclude recovery of spiked compounds. In this case data will be accepted if LCS data meets the acceptance criteria.*
4. *80% of the compounds tested must fall within the control limits. Control limits are dynamic and vary for individual tests as per USEPA Method 8000B.*
5. *Recoveries for surrogates are test dependent and are based on US EPA Method SW846. Control limits are dynamic and vary for individual tests but are within the criteria described in US EPA Method SW846.*

4.1.2 Corrective Actions

Analytical data that fail to meet the predetermined DQIs and acceptable limits of accuracy and precision will be managed using one or more of the following corrective actions (where possible) on a case-by-case basis:

- Reanalyse suspect samples, provided sample or extract is within holding time
- Evaluate and amend sampling and/or analytical procedures
- Resampling and reanalysis
- Accept the data as an estimate with an acknowledged level of bias and imprecision
- Discard the data.

In the event that data of questionable reliability are used, restrictions and limitations associated with the use of such data will be clearly identified. Failure to meet the DQIs will be reported and the significance to the outcome of the sampling and investigation works will be assessed.

4.2 Data Quality Validation Assessment

Analytical data validation is the process of assessing whether the data are in compliance with prescribed analytical method performance and AECOM project specifications. The primary objectives of this process are to review whether the groundwater results are of an acceptable quality and representative of conditions encountered at the Site. The data validation process should identify any limitations with respect to the results reported for all CoPC.

The process involves checking analytical procedure compliance and assessing the accuracy and precision of analytical data from a range of quality control measurements that are generated from both the field sampling and analytical programs.

The analytical data quality validation report is presented in **Appendix F** and a summary of considerations is provided in the following sections.

4.2.1 Soil

Laboratory QA/QC measures for soil sampling were considered to be acceptable for interpretive use. The following should be considered:

- Rinsate Blank QC313 reported an exceedance at 0.02 mg/L for Ammonia (as N). This is marginally above the laboratory LOR (0.01 mg/L) and a potential small positive bias in the results is unlikely to affect the interpretation of results.
- Field duplicate RPDs in soils for TRH/TPH, BTEXN and PAHs/phenols indicate potential variations associated with fill material, however, as approximately 97% of the RPDs were within acceptable limits, precision was considered to be adequate for interpretive use. The highest concentration of any inter- or intra-laboratory duplicate sample combination has been adopted for interpretive use.
- Soil samples received by laboratories were noted to be chilled with ice, although some samples were received above the acceptable temperature range of 0 – 6°C, at temperatures between 7.3 – 10.2°C (batches 1225146, 1229786, EM2510162 and EM2509944), however this was not considered to affect the interpretation of the results due to the following:
    - For batches 1225146, 1229786 and EM2510162, there was insufficient cooling time between sample collection and laboratory drop-off on the same day.
    - For batches EM2510162 and EM2509944 (interlaboratory duplicate samples QC203 and QC204), RPD exceedances were within acceptable limits and volatile CoPC concentrations were below LOR between primary / intra laboratory duplicate pairs (MW194_3.0 / QC103 and MW184_1.0 / QC101) that were received below 6°C.
- LORs were greater than adopted criteria for:
    - PAHs (benzo(a)pyrene and dibenz(a,h)anthracene) for human health (direct contact) for low/medium/high residential and recreational/open space uses. As residential use is not proposed in the areas soil samples were collected, and the future development of the Site includes a barrier between soil and direct contact with Site users, these LORs are not considered to affect the overall outcomes of assessment.
    - TRH (>C10-C16 (minus naphthalene) for human health (vapour intrusion) for residential users. As residential use is not proposed in any of the areas where soil samples were collected, the LOR is not considered to affect the overall outcomes of assessment.

4.2.2 Groundwater

Laboratory QA/QC measures for groundwater sampling were considered to be acceptable for interpretive use. The following should be considered:

- Rinsate Blank QC314 reported an exceedance at 0.02 mg/L for Ammonia (as N). This is marginally above the laboratory LOR (<0.02 mg/L) and a potential small positive bias in the results is unlikely to affect the interpretation of results.
- Field duplicate RPDs in groundwater for PAHs, PFAS, Methane and TRH indicate potential variations associated with sample heterogeneity, VOC instability and/or laboratory methods, however, as approximately 96.5% of the RPDs were within acceptable limits, precision was

considered to be adequate for interpretive use. The highest concentration of any inter- or intra-laboratory duplicate sample combination has been adopted for interpretive use.

- Groundwater samples received by laboratories were noted to be chilled with ice, although two batches of secondary interlaboratory duplicate samples were received above the acceptable temperature range of 0 – 6°C, at temperatures between 7.1 – 7.9°C (batches EM2512174 and EM2512123). This was not considered to affect suitability for interpretive use on the following basis:
  - For batch EM2512174, there were no RPD exceedances between primary sample MW16 (batch 1236601) and secondary interlaboratory sample QC207 (batch EM2512174) except for VOCs TRH C6-C10 and methane. However, these RPD exceedances were also reflected at a similar range between primary sample MW16 and intra-laboratory duplicate sample QC107 (batch 1241421 – originally received as part of batch 1236601) which were received below 6°C, therefore the RPD exceedance cannot be directly attributed to receipt temperature differences.
  - For batch EM2512123, there were no RPD exceedances (particularly between reported VOC concentrations) between primary sample MW186 (batch 1240646) and its respective inter-laboratory duplicate sample QC210 (EM2512123).
- Holding times were exceeded by 1 day for primary sample batch 1240646. It is considered that the potential for analyte degradation (particularly VOCs) caused by a holding time exceedance of only 1 day is likely to be minimal given all other preservation benchmarks were met (appropriate preservatives were in the sample bottles, samples were immediately placed on ice and received at the laboratory below 6°C within the holding time), and therefore it is considered unlikely to affect the suitability of the samples in this batch for interpretive use.
- Holding times were exceeded by 2 – 9 days in secondary interlaboratory duplicate sample batches EM2512123 and EM2512174 (depending on the analyte). Although there is the potential for analytes to have degraded over time and not be truly representative of field conditions and that this potential under reporting should be taken into consideration when interpreting data for these analytes, these holding time exceedances are not considered to adversely affect the suitability of this batch for interpretive use on the following basis:
  - There were few RPD exceedances between associated primary and intra- and interlaboratory duplicate sample pairs, and any exceedances were reflected in both primary / intra-laboratory and primary / interlaboratory sample combinations.
  - The highest reported concentration of any primary / intra- and interlaboratory duplicate sample combination has been adopted for interpretation.
- LORs were greater than adopted criteria for:
  - PAHs (naphthalene, benzo(a)pyrene, benz(a)anthracene, dibenz(a,h)anthracene, indeno(1,2,3-c,d)pyrene, sum of PAHs) and phenolic compounds (4,6-dintro-2-methylphenol [dinitro-o-cresol]), 2-cyclohexyl-4,6-dinitrophenol, dinoseb, 2-chlorophenol, 2,4-dichlorophenol) for drinking water (health and/or aesthetics). No extractive groundwater bores have been identified within 2 km of the Site, and extraction of groundwater for drinking purposes is not considered likely to occur now or in the future based on the urban setting and available reticulated water supply, and these LORs are not considered to present a data gap or any risk to human receptors.
  - PAHs (benz(a)anthracene, benzo(a)pyrene, dibenz(a,h)anthracene) and phenol (4,6-dintro-2-methylphenol [dinitro-o-cresol]) for recreational (primary/secondary contact) users. All these CoPC are low mobility or immobile in groundwater, based on the organic carbon-water partitioning ranges presented in the ASC NEPM, and are not considered to have sufficient mobility to migrate to the inferred points of groundwater discharge (Sullivan's Cove / the River Derwent) where they may come into contact with potential receptors, and these LORs are not considered to present a data gap or any risk to human receptors.

4.2.3 Soil vapour

Laboratory QA/QC measures for soil vapour sampling were considered to be acceptable for interpretive use. The following should be considered:

- Soil vapour intra-laboratory duplicate sample was not collected during the field program due to three of the 23 supplied canisters (including two spares and one duplicate canister) delivered with an initial pressure below the minimum laboratory-recommended threshold of -25 mmHg, indicating a potential leak during transit. Replacement canisters were immediately dispatched by the interstate laboratory but did not arrive prior to the completion of the field program. Laboratory data should be based on the precision and accuracy of laboratory statement of QA/QC performance. As a conservative approach (requiring management of vapour infiltration in future buildings and structures) has been adopted, repeat sampling is not proposed.

Based on the known contamination status of the Site, the procedures adopted during the field program, and the analytical data validation procedures employed, the data are considered to be suitable for interpretative use.

5.0 Changes To Scope of Work

The scope of work was undertaken in general accordance with the SAQP (AECOM, 2025d), however in some cases, unforeseen issues were encountered during the field program, which prompted a change to the scope of work. Notable changes to the SAQP scope are summarised in **Table 12** below.

Table 12 Changes to the Scope of Work

SAQP Scope	Change to Scope	Impact on Investigation Outcomes
Well Repair / Access Reinstatement Based on the February 2025 Site inspection, the following 24 wells required repair / access reinstated: • Bolt replacement (BG1, MW155, MW163, BH2_PS, MW100, MW122, MW129, MW148, MW123B, MW135_GHD) • Gatic replacement (MW121, MW36, RN2, TW02, MW102, MW130_GHD) • Uncovered / access reinstated (MW124A & B, MW149, MW103, NR2, MW162, TW01, S9)	All listed wells were repaired and /or made accessible with the following exceptions: • MW100: bolts were not replaced as unique bolt type was unavailable at the time. Well otherwise in good condition in an un-trafficked area, with unbolted gatic lid firmly in place within gatic rim. • NR2, TW01, MW103 and S9 were deemed lost and potentially damaged or decommissioned following an extensive search using a metal detector, shallow probing using hand tools, and surveyor locating using GPS coordinates. NR2 and TW01 were lost within the TasWater zone of sewer construction earthworks that were active at the time of the investigation. • MW135_GHD was inaccessible within the TasPorts area throughout the investigation. Additional wells were repaired as follows: • MW177 was buried with no gatic beneath the gravel carpark in the TasWater lease area. The well was located using a surveyor, exposed and a new gatic was installed. • MW128B was cleared of an obstruction that was lodged down the well casing. • Bolts were replaced in MW131_GHD, MW132_GHD, MW133_GHD and MW150	**Minimal Impact:** All accessible wells reinstated to good condition for inclusion in the dataset. Inaccessible wells were replaced by newly drilled wells to provide representative sampling locations for those respective areas of the Site.

SAQP Scope	Change to Scope	Impact on Investigation Outcomes
Monitoring Well Installation A total of 18 groundwater monitoring wells were proposed to be installed (MW120A, MW182, MW183, MW184, MW185, MW186, MW187, MW188, MW189, MW190, MW191, MW192, MW193, MW194, MW195, MW196, MW197 and MW198). It is noted that there was an allowance to install an additional three replacement groundwater monitoring wells depending on the condition of the existing monitoring well network at the time of the investigation.	The following groundwater monitoring wells were not drilled and installed: • MW195 – the well was proposed to replace obstructed well MW128A in the Gateway area. This well was no longer required following successful clearing of the obstruction within MW128A during the investigation. Although not technically a change to scope, it is noted that the following additional groundwater monitoring wells were installed as part of the allowance for additional replacement groundwater monitoring wells to be drilled and installed: • MW103A – to replace lost well MW103. • NR2A – to replace lost well NR2.	**Minimal Impact:** All locations targeted in the SAQP were covered by replacement or re-instated wells.
Proposed Drilling Locations Figure F3 in the SAQP (AECOM, 2025d) outlines the proposed locations of the new groundwater monitoring well, soil vapour bores and PASS soil bores.	All proposed locations were positioned as scoped, with the following exceptions: • MW188 and MW193 were moved approximately 20 m further to the south to compensate for lost well S9, which previously delineated the south-western edge of the adjacent LNAPL plume, and to avoid subsurface services identified within the roadway at the proposed locations during service identification and clearance prior to drilling. • Due to restricted drill rig accessibility at the original proposed location, MW120A was moved approximately 10 m east. • Due to the recent construction of a new truck waste water dumping point and other critical underground services in the area, MW189 was moved approximately 10 m south-west of the original location. • SV39 and MW198 were identified by Aboriginal Heritage Tasmania (AHT) as close to, a registered Aboriginal Heritage Site, and requiring a permit. MW198 was moved approximately 15 m south-east. SV39 was installed at the proposed location due to a communication error (discussed below the table).	**Minimal Impact:** The modified positioning of select wells provided either similar or enhanced spatial data coverage to meet the objectives of the investigation, as: • MW188 and MW193 were intended to provide additional delineation around LNAPL Plume B, located to the east of the proposed and actual locations of these wells. The new locations are cross- or down-hydraulic gradient of LNAPL and fulfil this purpose. • MW120A was located down gradient of former well MW120, and in a suitable location to assess groundwater entering the Site from the north-west. • The updated location of MW189 is considered suitable for the intended purpose of monitoring groundwater interaction at the Site boundary adjacent to the Sewage Treatment Plant, located off-Site to the east. • MW198 was intended to be within the footprint of the stadium and former gasworks land use. The updated location fits both these parameters. SV39 is discussed below this table.

SAQP Scope	Change to Scope	Impact on Investigation Outcomes
TasPorts Access 13 off-Site groundwater monitoring wells located east of the Site in TasPorts land were scoped to be gauged as part of the investigation (C1, MW123A & B, MW135_GHD, MW136_GHD, PC05, PC08, PC10, PC11, PC12, PC13, PC14 and PC15). Eight of these wells were scoped to be sampled and analysed for CoPC (MW135_GHD, PC05, PC08, PC10, PC11, PC12, PC14 & PC15)	AECOM did not receive permission from TasPorts to access their land to gauge or sample wells, and groundwater monitoring data from this area (including groundwater elevation, LNAPL presence/thickness and CoPC concentrations) were not included in this investigation.	**Minimal Impact** Data from wells on TasPorts land would assist in understanding the groundwater flow and potential contaminant transport to the east of the Site, and to delineate the extent of LNAPL Plume B. However, previous access to these wells to gauge in November 2019 (AECOM, 2020b) and February 2025 (AECOM, 2025c) indicated that groundwater may flow into the Site from TasPorts, or there may be localised interruption to groundwater flow from a buried seawall installed during historic land reclamation which runs along the eastern boundary of the Site.

SAQP Scope	Change to Scope	Impact on Investigation Outcomes
Groundwater Analytical Scope A total of 68 groundwater monitoring wells were scoped to be sampled and analysed for CoPC as part of this investigation.	A total of 56 groundwater monitoring wells were sampled and analysed. The following 17 wells were omitted from the groundwater sampling and analytical scope: • TasPorts wells **MW135_GHD, PC05, PC08, PC10, PC11, PC12, PC14 & PC15** (discussed above) • **MW145:** Well casing filled with concrete, appears to have been decommissioned. • **NR2 & TW01**: lost within the TasWater zone of sewer construction earthworks. • **MW185 & MW187:** LNAPL sheen in groundwater • **S9:** lost & potentially damaged or decommissioned • **MW129:** targeting lower aquifer – mistakenly included in the SAQP. • **MW195:** not drilled due to reinstatement/unblocking of MW128A. • **MW181:** dry well. The following additional five wells were added to the scope: • **NR2A:** Replacement well for lost well NR2. • **MW132_GHD:** Sampled by mistake. Initially thought to be MW131_GHD. • **MW194:** Groundwater sampling and analysis mistakenly omitted from SAQP scope. • **MW128A:** Sampled due to successful unblocking/reinstatement of well. • **RS6:** Upper-aquifer replacement well for adjacent lower-aquifer well MW129 mistakenly scoped for sampling and analysis.	**Minimal Impact:** • **MW145:** Upgradient groundwater conditions are characterised by adjacent well NR1. • **NR2 & TW01:** Adjacent wells **NR2A** (NR2 replacement) and **MW167** are considered to provide sufficient coverage of this area. • **MW185 & MW187:** LNAPL expected in these wells, consistent with historical data from the area. • **S9:** Newly installed well MW193 is considered to sufficiently cover this data point. • **MW129:** Replacement well **RS6** sufficiently covers this datapoint. • **MW195:** Unblocked well **MW128A** sufficiently covers this datapoint. • **MW181:** MW181 targets localised perched water. Source-pathway-receptor linkage remains assessable via immediately adjacent well MW179, which targets deeper groundwater that discharges to the nearest receptor (Derwent River). • **MW194:** As adjacent well BG1 was screened across both the upper surface fill layer and into shallow dolerite bedrock, the inclusion of MW194 enabled the assessment of up-gradient groundwater exclusively within the underlying dolerite bedrock at this location. • **MW132_GHD:** The accidental addition of this groundwater data point serves to enhance the dataset.

SAQP Scope	Change to Scope	Impact on Investigation Outcomes
Consideration of the Mobility or Organic Chemicals in the Aquifer Up to nine wells were scoped to have additional samples collected and filtered using a 5 µm filter to assess the concentration of dissolved plus mobile colloidal phase organic compounds while filtering out the larger non-mobile particulate sediment fraction.	Neither the sampling equipment suppliers or laboratories were able to source 5 µm filters for this investigation, however the largest available filter size of 1 µm was available and provided for use for this component of the investigation.	**Minimal Impact** The literature summarised in *The Essential Handbook of Ground-Water Sampling* (Nielsen and Nielsen, 2006) identified that mobile colloid phases in groundwater include particulates in the range from 0.005 µm up to 10 µm. Given that the upper aquifer predominantly resides within sand (>50 µm grain size) with fill and a minor clay component (<2 µm grain size) at most groundwater monitoring well most locations, both 1 µm and 5 µm are considered sufficient to filter out most non-mobile sediment fractions for the purposes of this initial assessment. It is noted that methods are currently in the process of development with the laboratories to further enhance accuracy and reliability of non-mobile sediment separation processes, so further confirmation testing in future may be warranted.
A total of 19 soil vapour monitoring locations were scoped to be sampled, including three pre-existing locations (SV07, SV18 and SV25) and each of the 16 locations installed as part of this investigation (SV31 – SV46).	All soil vapour monitoring locations were sampled except for SV44 (located at the south-eastern end of the Gateway area), due to the presence of water within the implant tubing, which prevented sampling.	**Minimal:** SV44 was installed immediately adjacent to 'Tar Plume B', which was treated via ISS in 2024, in order to assess potential vapour generation from the solidified DNAPL which remains *in situ* within a tank base. While SV44 could not be sampled, six soil vapour wells across the Gateway area (SV39 – SV43 and SV45) provide coverage across the majority of the Gateway area including areas immediately adjacent to both untreated and treated gasworks DNAPL, and the SEMP currently requires installation of a vapour barrier as part of future development for buildings on the Site. The CoPC which this future vapour barrier should protect against can be informed by the contaminants detected within other soil vapour wells within the Gateway area.

SAQP Scope	Change to Scope	Impact on Investigation Outcomes
Soil vapour QC samples including one inter-laboratory duplicate and one intra-laboratory duplicate were scoped to be included in the investigation.	Some of the soil vapour canisters had lost an unacceptable amount of vacuum during interstate transit to the Site prior to the sampling event, and due to courier issues, additional canisters that were immediately ordered from the laboratory did not make it to the Site before the end of the field program. Unfortunately, the number of spare canisters provided in the initial delivery (to counter potential issues like this) did not cover the entire scope of analysis including all QC samples. Therefore, to ensure that all soil vapour bore locations (aside from SV44 noted above) and the shroud leak test indicator sample could be collected, duplicate canister samples were excluded.	**Minimal:** Although field sampling repeatability was not able to be assessed for soil vapour sampling in this case, it is not considered to adversely impact the outcome of the investigation, as the outcome of the investigation recommends that protection measures be applied (i.e., a vapour barrier in structures). It is noted that the relative percent difference calculations for all internal laboratory split duplicate samples were well within acceptable limits.

As noted in changes to proposed drilling locations on **Table 12** two locations (SV39 and MW198) were identified by AHT as being in the vicinity of a registered Aboriginal heritage site, although not within the boundaries of the registered area. However, AHT advised that a permit under the Aboriginal Heritage Act 1975 was considered required for these locations as, at the time of consultation, AHT was awaiting archaeological site records with the potential to modify the extent of the area of sensitivity.

MW198 was moved approximately 15 m south east and the new location was confirmed by AHT as not considered to require a permit. However, due to an error in communication, SV39 was advanced to 1.15 m bgl by hand auger and a soil vapour well implant installed. The disturbed soil is considered likely to be historic fill material, likely dating back to historic gasworks operations, based on observed soil being consistent with fill from elsewhere in the gasworks footprint, and observed slag waste in soil.

When identified, the installation of SV39 was reported to AHT on 1 July 2025. Details of the bore and soil disturbed, including bore log, location, depth, and photographs of the soil cutting removed, were also supplied, and the soil cuttings have been retained and stored on Site, with the stratigraphy intact. AHT acknowledged notification, and have not provided any further communication or requests regarding SV39 at the time of issue of this report.

6.0 Field Observations

This DSI considers assessments undertaken within the Macquarie Point Site area (refer to **Figure F1, Appendix A**), in accordance with the scope detailed in the SAQP (AECOM, 2025d) except as noted earlier in **Section 5.0.**

The data considered to inform the investigation are from samples collected during field assessments completed between 26 May 2025 to 27 June 2025.

The following sections provide a summary of the field observations noted throughout the soil, groundwater and soil vapour investigation.

6.1 Soil

Soil investigation locations are presented in **Figure F2** (**Appendix A**) section. Soil conditions were logged and sampled from a total of 43 drilling locations, including:

- 19 Groundwater Monitoring Wells (MW103A, MW120A, MW182, MW183, MW184, MW185, MW186, MW187, MW188, MW189, MW190, MW191, MW192, MW193, MW194, MW196, MW197, MW198 and NR2A).
- 14 soil vapour bores (SV31, SV32, SV33, SV34, SV35, SV36, SV39, SV40, SV41, SV42, SV43, SV44, SV45 and SV46). Soil was not logged or sampled from sub-slab soil vapour pins SV37 and SV38, as implants were installed immediately below the existing concrete slab.
- 10 soil bores for the assessment of Potential Acid Sulphate Soil (PASS) (BH-004A, BH-004N, BH-004S, BH-004E, BH-004W, ABH-004A, ABH-004N, ABH-004S, ABH-004E, and ABH-004W).

6.1.1 Lithology

Bore logs from each of the 43 drilling locations are presented in **Appendix D**. A summary of Geological observations at each drilling location from the investigation can be summarised as follows:

Table 13 Summary of Lithology

Feature		Approx. Depth Range (m bgl)	Observed Location
Surface	Asphalt	0 – 0.1	Asphalt was observed at the surface of drilling locations located across the central-eastern and south-eastern portions of the Site (MW188, MW192, MW193, SV34, SV36, SV46, BH004N/S/E/W and ABH004N/S/E/W).
	Concrete	0 – 0.4	Concrete slab was observed at the surface of Escarpment location MW194 at the far northern boundary of the Site, and where the two sub-slab soil vapour pins (SV37 & SV38) were installed at the far south-eastern corner of the Site in the Precinct South area.
	Gravel / Sandy Clayey Gravel	0 – 0.3	All other drilling locations across the following areas: • The Precinct North, northern and western portion (MW187, MW190, SV33, SV35) • Gateway Area, central and western portion (MW196 – MW198, SV39 – SV45) • The Promenade and Underground Carpark Area (MW182, MW183, MW184, MW185, MW186, MW191, SV31, SV32) • The Escarpment (MW120A, MW103A) • Audit Area 4 East (MW189, NR2A)
Fill		0.5 – 6+	Fill material comprising varying proportions of sand, gravel and clay was observed at all groundwater monitoring well,

Feature	Approx. Depth Range (m bgl)	Observed Location
		soil vapour bore and PASS soil bore drilling locations, to depths ranging from approximately 0.5 m in the northern portions of the Site to approximately 4 – 6+ metres below ground level (m bgl) across the central and southern portions of the Site. Within this fill layer, anthropogenic materials including varying portions of brick, concrete, metal, ceramic, wood, slag and glass fragments was observed at 31 of the 45 drilling locations (MW182, MW183, MW187, MW188, MW190, MW191, MW192, MW193, MW196, MW197, MW198, NR2A, SV31, SV32, SV33, SV35, SV39, SV40, SV41, SV45, SV46, ABH-004A/E/N/S/W and BH004A/E/N/S/W). Large boulders were observed at SV34 to its total depth of 2.6 m bgl in the Precinct North area, potentially associated with a former sea wall. These observations are consistent with known historical land reclamation activity that occurred across the central and southern portions of the Site.
Sand	3 – 6+	The upper fill layer interfaced with a fine to medium grained sand at the base of most drilling locations across the central and southern down-gradient portions of the Site (MW182, MW183, MW184, MW185, MW187, MW190, MW196, MW197, MW198 & NR2A)
Dolerite	0.5 – 5+	Dolerite bedrock was encountered below the sand layer at approximately 5 m bgl at drilling locations located in central-northern portion of the Site (NR2A, MW103A, MW182, MW183, MW184, MW185 & MW191). At the northern-most drilling locations MW120A, MW191, MW194 and MW189, located adjacent to the natural topographic rise, Dolerite bedrock was encountered immediately below shallow fill at approximately 0.5 to 1.5 m bgl.

6.1.2 Evidence of Soil Impact

Observed evidence of soil impact are summarised in **Table 14** below. Bore logs from each of the 43 drilling locations are presented in **Appendix D**.

Table 14 Observations of Potential Impact

Assessment Area	Location	Depth Range (m bgl)	Impacted Layer(s)	Olfactory	Visual	Maximum PID (ppm)
The Promenade and Underground Carpark	MW183	0.2 – 4.8	Fill and underlying sand	Hydrocarbon odour	Green staining	25
	MW184	4 – 4.1	Fill	None	None	32.4
	MW185	1.8 – 4.1	Fill	Hydrocarbon odour	None	57.6
	MW186	3.2 – 4	Fill	Hydrocarbon odour	LNAPL Sheen	1.1

Assessment Area	Location	Depth Range (m bgl)	Impacted Layer(s)	Olfactory	Visual	Maximum PID (ppm)
The Precinct South	MW188	3 – 4.1	Fill	Organic odour	Green staining	0
	ABH-004W	3.2 – 4.0	Fill	Hydrocarbon odour	None	0
The Precinct North	MW190	3.5 – 6	Fill and underlying sand	Hydrocarbon odour	Green staining	22
The Gateway	MW196	2.2 – 3	Sand	Slight hydrocarbon odour	None	3.7
	MW197	1.5 – 6	Fill and underlying sand	Slight hydrocarbon odour	None	1.9
	MW198	1.1 – 5.5	Fill and underlying sand	Hydrocarbon odour	None	12.2
	SV41	0.4 – 0.9	Fill	Strong hydrocarbon odour	None	108
	SV42	0.2 – 2.15	Fill	Hydrocarbon odour	None	34.2
	SV43	2 – 2.25	Fill	Strong chlorinated hydrocarbon odour	Tar, black staining	192
	SV44	0 – 2.15	Fill	Hydrocarbon odour	Tar, black staining at 2 – 2.15 m bgl	523
	SV45	1.5 – 2.15	Sand	Slight hydrocarbon odour	None	1.5
Audit Area 4 East	NR2A	1.3 – 5.6	Fill and underlying sand	Hydrocarbon odour	Green staining	0.5

6.2 Groundwater

6.2.1 Groundwater Monitoring Well Installation and Development

Groundwater monitoring well installations details are presented in **Appendix D**. Groundwater observations during monitoring well installation and development can be summarised as follows:

- Groundwater was encountered between approximately 1 – 5 m bgl across the Site, generally grading from deep to shallow from north / north-west to the south-east of the Site.
- The targeted upper groundwater aquifer sat within porous fill material and underlying natural sand at most well locations across the central and southern portions of the Site, with the exception of MW120A, MW103A, MW189, MW191 and MW194 located near the natural topographic rise to the north of the Site, where groundwater was initially encountered at varying depths within weathered/fractured zones of the dolerite bedrock.
- MW120A was drilled through predominantly fresh dolerite to a depth of 9 m bgl, where a potentially groundwater-bearing weathered zone was noted at 7.3 – 8 m bgl. MW120A was dry for over two

weeks following installation, however toward the end of the groundwater monitoring event (GME) a small amount had slowly recharged at the base which was subsequently sampled.

- Following installation, a minimum of three bore volumes were pumped from each groundwater monitoring well (except for MW120A) using a twister pump and metal bailer for surging and drilling sediment removal. Unblocked pre-existing wells MW128A & B were also developed prior to sampling due to potential introduction of demolition cobbles/debris into the casing.

6.2.2 Groundwater Elevation

Groundwater gauging results are presented in **Table T1** (**Appendix B**), and groundwater elevation contours are presented on **Figure F3** (**Appendix A**). Groundwater gauging and elevation observations can be summarised as follows:

- Consistent with historical monitoring events, LNAPL-corrected groundwater elevation ranged from 4.684 mAHD at BG1 located at the base of the sharp topographic rise to the north of the Site, to 0.423 mAHD at off-Site well MW152, located in the University of Tasmania carpark to the south-east of the Site. As groundwater level was not likely stable at the time of observation in MW120A, groundwater elevation data from this well was not considered as part of this investigation.
- Groundwater elevation contours generally followed the pattern of topographic elevation across the Site, indicating a relatively steep up-gradient flow direction to the south-east, prior to flattening out to a very gentle gradient across the central and south-eastern down-gradient areas. Groundwater flow direction followed the steep north-easterly slope towards Regatta Point further around the headland to the far north of the Site.

  A potential northerly and easterly component of groundwater flow in the Escarpment, which was noted in February 2025 (AECOM, 2025c) was not observed during groundwater gauging. This flow component was attributed at the time to being a potential result of lack of access to wells in the Escarpment in February 2025, and based on the results of the June gauging round, and historic observations of Site groundwater flow, this is considered to be likely and it is inferred that no northerly or easterly flow is present in the Escarpment.
- A slight localised groundwater elevation mound was observed at MW167 at the far eastern boundary of the Site, that appeared to counter a steep south-easterly flow direction from upgradient wells to the north-west:
  - It is noted that groundwater shifted in elevation by 0.47 m from 1.684 mAHD when initially gauged on 16 June 2025, to 1.214 mAHD when sampled on 20 June 2025. No significant change in groundwater elevation was observed in adjacent surrounding wells.
  - It is noted that at the time of the GME, TasWater were actively removing soil from a large deep excavation approximately 20 m north-east of this well as part of a regional sewer expansion project, therefore groundwater elevation (and flow direction) in this area may not reflect typical conditions and may require further confirmation in future monitoring events.
- A further slight localised groundwater elevation mound was noted at MW164 at the far south-eastern boundary that appeared to counter the overall south-easterly flow direction.
- As the TasPorts wells could not be access during this investigation, groundwater contours and flow direction could not be confirmed to the east of the Site. Previous gauging events in 2019 (AECOM, 2020b) and earlier in 2025 (AECOM, 2025c) had indicated that there may be flow onto the Site from TasPorts, or that a buried seawall installed during historic land reclamation may have a localised influence on groundwater flow.

Overall, groundwater elevation and inferred flow directions were consistent with previous assessments.

6.2.3 Groundwater Quality Field Parameters

Groundwater quality data collected from the June 2025 investigation is provided in **Table T2** (**Appendix B**) and summarised in **Table 15** below.

Table 15 Summary – Groundwater Quality Field Parameters

Parameter	pH (pH units)	EC (µS/cm)[1]	TDS (mg/L)[2]	ORP (mV)[3]	DO (mg/L)
Minimum	6.36 (MW101)	355 (MW16)	231 (MW16)	-142.8 (MW130_GHD)	0.07 (MW197)
Maximum	11.95 (MW123A)	51,340 (TW02)	33,371 (TW02)	377 (MW128A)	6.48 (BG1)
Average	NA	3,476	2,259	143.4	0.87

Note: 1 – MicroSiemens per centimetre; 2 – TDS calculated by multiplying EC by 0.65; 3 – ORP corrected for standard hydrogen electrode; NA – calculating an average pH value is not applicable as pH is measured on a logarithmic scale.

Due to a broken Oxygen Reduction Potential (ORP) probe, groundwater quality field parameters were later collected *in-situ* at the same depth following sampling once a replacement water quality meter arrived at BG1, MW102, MW121, MW122, MW127A, MW148, MW152, MW155, MW159, MW178, MW180, MW182, MW191, MW192, MW194, RN2 and TW02. The *in-situ* results have been reported in **Table T2** for these wells and in **Table 15** above. The original water quality measurements (with inaccurate ORP readings) were recorded to assess groundwater stabilisation during purging are presented in the field sheets in **Appendix H**.

Water quality meters were bump-tested and calibrated as required at a minimum of once per day prior to sampling, and where potentially anomalous results were observed. Calibration records are presented in **Appendix G**.

6.2.3.1 pH

pH measurements mostly ranged between 6.36 (MW101) and 8.07 (MW120A), indicating slightly acidic to slightly basic conditions across most of the upper aquifer. Moderately basic to highly basic conditions were reported at MW197 (9.37) and MW123A (11.95), which are noted to be within close proximity to each other to the south and south-east of the Gateway area. It is noted that pH was last recorded at MW123A as 6.83 and 6.56 in August and November 2019, respectively (AECOM, 2020b).

No pH of <5, which would be considered a potential indicator of ASS, was detected.

6.2.3.2 Electrical Conductivity and Total Dissolved Solids

The EC of groundwater depends on the presence of dissolved ions in the groundwater and is multiplied by a factor of 0.65 to determine TDS, which is used to understand PEVs of groundwater applicable to the Site. The measured field EC and TDS indicated a broad range of fresh to saline (Fetter, 1994*)* aquifer conditions across the Site.

Laboratory-measured TDS ranged between 170 mg/L (at MW16) to 28,000 mg/L (at MW180).

6.2.3.3 Oxygen Reduction Potential and Dissolved Oxygen

ORP is a measure of the relative tendency of a solution to accept the transfer of electrons and may be used to assess the likely presence of aerobic respiration. Low ORP (<720 mV (CRC CARE, 2010)) values indicate reducing conditions and an anaerobic environment. Levels of DO and ORP in the groundwater environment may be used as initial indicators for natural attenuation.

The range of ORP measured in groundwater across the Site (-142.8 to 377 mV) indicate anaerobic conditions, which corresponds with the relatively low DO range measured in groundwater across the Site (0.07 to 6.48 mg/L). The lowest to highest ORP readings generally corresponded with the lowest to highest DO readings measured across the groundwater monitoring well network.

6.2.4 Evidence of Groundwater Impact

Visual and/or olfactory observations of impact noted during groundwater well development and/or sampling can be summarised in **Table 16** below. Measurable LNAPL was observed in three wells in the vicinity of LNAPL Plume B in the Precinct South area (MW03, PW02, and S8). It is noted that measurable LNAPL was also observed briefly in a fourth well (MW185) immediately prior to development, however only a sheen was observed in this well throughout the remainder of the June 2025 field investigation program following development.

Table 16 Observations of Groundwater Impact

Area	Well ID	Odour	LNAPL / Sheen	Other
Off-Site	MW130_GHD	Hydrocarbon Odour	-	-
The Promenade and Underground Carpark	MW183	Hydrocarbon odour noted during development. Not noted during sampling.	Sheen noted during development and sampling.	-
	MW184	'Egg' odour noted during development. Not noted during sampling.	None noted	None noted
	MW185	Hydrocarbon odour noted during development.	5 mm yellow medium-viscosity LNAPL noted immediately prior to development. LNAPL sheen observed during and following development. Not sampled due to LNAPL observation prior to development and LNAPL sheen later confirmed during the sampling round.	None noted
	MW186	Hydrocarbon odour during development. Not noted during sampling.	Slight sheen noted during development. Not noted during sampling.	None noted
The Precinct North	MW187	Hydrocarbon odour during development. Not noted during sampling.	Sheen noted during development. Not noted during sampling.	None noted
The Precinct South	MW03	Hydrocarbon Odour during gauging and transmissivity testing	70 mm LNAPL recorded during gauging. 20 mm dark brown, medium viscosity LNAPL recorded prior to transmissivity test.	None noted

Area	Well ID	Odour	LNAPL / Sheen	Other
	PW02	Hydrocarbon Odour during gauging and transmissivity testing	42 mm LNAPL recorded during gauging. 62 mm dark brown, medium viscosity LNAPL recorded prior to transmissivity test.	None noted
	S8	Hydrocarbon Odour during gauging and transmissivity testing	81 mm LNAPL recorded during gauging 62 mm dark brown, medium viscosity LNAPL recorded prior to transmissivity test.	None noted
	MW154	None noted	LNAPL globules in bailer	None noted
The Gateway	MW128A	Hydrocarbon odour noted during development. Not noted during sampling.	Sheen noted during development. Not noted during sampling.	None noted
	MW196	Hydrocarbon odour noted during development. Not noted during sampling.	Sheen noted during development. Not noted during sampling.	None noted
	MW197	Hydrocarbon odour noted during development. ‘Chemical’ odour noted during sampling.	Sheen noted during development. Not noted during sampling.	None noted
	MW198	No odour noted during development. ‘Chemical’ odour noted during sampling.	None noted	None noted
Audit Area 4 East	NR2A	None noted	Slight sheen noted during development. Not noted during sampling.	None noted

6.3 Soil Vapour

Soil vapour sampling field records are presented in the **Tables T3 and T4** (**Appendix B**), and are summarised below.

6.3.1 Leak Testing

Leak testing results are presented in **Table T3** (**Appendix B**) and can be summarised as follows:

- All samples passed the shut-in test.
- All initial canister pressures ranged from -26 to -30 mmHg, which was within the acceptable range as prescribed by the laboratory.
- Final sample pressures ranged from -4 to -6 mmHg, which is within the recommended range.
- The difference in pressure recorded at the completion of sampling and by the laboratory upon receipt ranged from -1.94 to +1.96 mmHg, which resulted in a calculated percentage difference of between -11% (an apparent increase in vacuum) and 8% (a decrease in vacuum). A decrease in vacuum can be indicative of leakage during transit, which may cause a low bias (with fresh air influx) or high bias (if VOC influx occurred prior to sampling (i.e., during transport or storage)) to the results, however none of the canisters exceeded the maximum relative vacuum loss % threshold of 10%. Given the low range of pressure difference, and that apparent increases in vacuum were also recorded at a similar scale and distribution to the decreases, they are likely within the range of error and imprecision between pressure gauges, and not considered to adversely impact the integrity of the results.
- The concentration of isopropanol leak test indicator gas within each sample ranged from <0.01 to 0.77% of the concentration within the shroud, which is well below the maximum threshold of 10%. This indicates that reported concentrations are considered to be representative of targeted sub-surface soil vapour conditions.

6.3.2 Field Parameters

The field parameters collected during sampling are presented in **Table T4** (**Appendix B**) and can be summarised as follows:

- PID readings ranged between 0 – 481.7 ppm. The highest PID readings were noted at SV41 (481.7 ppm) and SV43 (84.2 ppm), indicating presence of volatile hydrocarbons within the Gateway area. It is noted that a low PID reading can be expected in the vicinity of LNAPL plumes comprised of non-volatile hydrocarbon fractions (e.g. diesel, oil) – as was the case at soil vapour bores SV07, SV31, SV32, SV33, SV37 and SV38 (located in the vicinity of LNAPL plumes A1, A2, A3 and B), which ranged from 0 – 15.2 ppm.
- Methane (CH_4) readings ranged between 0 – 77.9 % v/v. The highest readings were noted at SV18 (17.7 % v/v), SV25 (62.4 % v/v), SV32 (15.5 % v/v) and SV34 (77.9 % v/v). Elevated methane can be indicative of biodegradative activity.
- Carbon dioxide (CO_2) reading ranged from 0 – 17.5 % v/v. The highest CO_2 readings were noted at SV18 (10.7 % v/v), SV31 (15.1 % v/v), SV34 (17.5 % v/v), SV39 (10.7 % v/v) and SV46 (11.5 % v/v). Increased CO_2 can be indicative of biodegradative activity.
- Oxygen ranged from 20.5 % v/v (near atmospheric levels) to <1 % v/v. Substantial oxygen depletion <10% v/v was noted at all soil vapour sampling locations except SV36 (20.5 % v/v), SV37 (16.5 % v/v), SV40 (19.1 % v/v), and SV41 (17.4 % v/v). Oxygen depletion can be indicative of biodegradative activity.
- Initial pre-sampling field parameters were comparable to post-sampling field parameters at all sample locations, indicating that soil vapour samples are likely representative of targeted sub-surface conditions, with no evidence of fresh air influx via preferential pathways surrounding each soil vapour bore throughout the purging and sampling process.

7.0 Results and Discussion

All soil, groundwater, and soil vapour samples were analysed by laboratories accredited by NATA for the analyses selected. Soil and groundwater laboratory analytical reports are provided in **Appendix E**.

7.1 Adequacy of Monitoring Networks

The spatial and temporal adequacy of groundwater and soil vapour monitoring networks is assessed below. It is noted that soil data was collected as part of the advancement of soil vapour and groundwater wells, and the adequacy of soil sampling will be considered as part of broader assessments of each area and include consideration of other available soil data.

7.1.1 Groundwater

The groundwater well network at the Site consists of:

- 76 wells on the Site (including Regatta Point).
- 12 wells off-Site, located to the south (inferred direction of groundwater discharge) along Evans Street and in a carpark of the University of Tasmania.

An additional 8 wells are known to be present on TasPorts land to the east, but access to these wells was not granted for this investigation.

The overarching aim of the groundwater network is to provide sufficient information to delineate the lateral and vertical extent of contamination, and the groundwater flow system, and allow assessment of the risks to relevant receptors. The goals of the June 2025 groundwater investigation (AECOM, 2025d) were to collect groundwater data from sufficient locations to :

- Monitor groundwater flow and direction, and collect data on the general condition of groundwater at the Site.
- Delineate and assess key sources of contamination
  - LNAPL plumes A1, A2, former LNAPL plume A3 and LNAPL plume B.
  - Gasworks DNAPL (Tar Plumes A, B, C and D).
- Coverage of areas requiring further assessment in the Gateway area (AECOM, 2025a).

Existing groundwater well locations were also selected and sampled to assess historic Site features identified as potential sources of contamination.

Table 17, below, assesses the groundwater monitoring conducted as part of this assessment against these goals.

Table 17 Groundwater Monitoring - Spatial Adequacy

Requirement	Actions / Locations	Sufficient to Address Requirement?
Monitoring groundwater flow, direction, and condition	Gauging of 88 locations was conducted at the locations, listed on **Table T1** and shown on **Figure F3**. The following is assessed on the suitability of the groundwater network: • Approximate spacing between wells ranges from ~15 m in the south-eastern corner, where LNAPL Plume B is present, to ~130 m along the northern boundary. Spacing is considered adequate for assessment as areas of where greater spacing has occurred (the northern and, to a lesser extent, the western boundary) have not had indicators of potential source areas of groundwater impact detected in soil bores advanced to and below the water table in these areas, and no requirement for assessment of groundwater has been identified in the previous DSI/CUTEP reports for these areas. • Groundwater well locations MW120A, MW121, MW145, MW177A, MW194, and NR1 are considered suitable for assessment of background groundwater concentrations as these locations are on the Site boundary adjacent to regional groundwater, and inferred upgradient of Site areas identified as potential sources of impact to groundwater. It is noted that the following wells are present on up-gradient Site boundary locations, and are considered suitable for assessment of ground water entering the Site, but have considerations which may render them unsuitable for use as background wells: - The well screen in BG1 crosses both fill and dolerite, and water in this well may have contributions from both aquifers. - MW101, MW128A, and MW128B are installed within the former gasworks area, which extends off-Site and upgradient, and may have impacts from off-Site sources. - Wells along the eastern boundary may have impacts from historic land uses or TasWater/TasPorts activities in neighbouring sites. While no off-Site wells are located and available for sampling to the north, or west due to access not being granted by land owners (east), services and high-traffic roadways (west) or the dolerite hill (north), wells on the Site boundary in these directions are considered suitable for assessment of groundwater entering the Site. • Inferred down-gradient groundwater towards potential off-Site receptors and the overall inferred discharge of groundwater is assessed by:	Yes

Requirement	Actions / Locations	Sufficient to Address Requirement?
	- South (towards Sullivans Cove) ▪ On-Site wells along the southern boundary: MW196, MW197, MW129, RS6, MW124A, MW124B, MW125A, MW125B, MW193, MW60, MW126A, MW126B ▪ Off-Site wells along Evans Street and in the University of Tasmania carpark: MW123A, MW123B, MW130_GHD, MW131_GHD, MW133_GHD, MW150, MW151, MW152, MW153 - North-east (towards the River Derwent) ▪ On-Site wells on Regatta Point: MW178, MW179, MW180, MW181 On-Site groundwater wells targeting specific contamination are discussed below, however, sampling to collect data was collected from 55 groundwater wells, including groundwater on or near the Site boundary from the following locations: • North – MW120A, BG1, MW194, NR1, MW160, MW161 (all on-Site) (6 total) • East - MW159, MW189, NR2A, MW167, TW02, RH2, MW192, MW163, MW164, MW6, MW03, PW02, MW05, MW16 (all on-Site) (14 total) • South - On-Site: MW126A, MW60, MW125A, MW124A, MW149, MW129, RS6, MW197, MW196 (9 total) - Off-Site: MW150, MW151, MW152, MW153, MW133_GHD, MW132_GHD, MW123A, (7 total) • West – MW128A, MW101, MW121, MW120A (all on-Site) (4 total). The gauging and sampling program included locations within the Site and along the Site boundaries and is considered sufficient to assess groundwater condition and assess groundwater entering and discharging from the Site.	
LNAPL Plumes A1 and A2, and Former LNAPL Plume A3 Delineation	LNAPL Plumes A1 and A2, and former LNAPL Plume A3, will be monitored/delineated by the following locations: • Within the plumes: MW183, MW185, MW187 • Up-gradient: BG1, MW191, MW103, MW36, MW121, MW120A • Cross-gradient: MW173, MW186, MW182, MW184 • Down-gradient: MW175, MW176, MW146, RN4, MW144, TW02, RN2 The number and orientation of existing or proposed wells exceeds the requirements in the ASC NEPM and delineates LNAPL and former LNAPL plumes historic extents, and new proposed wells intersect the inferred locations of LNAPL and delineate in all directions.	Yes

Requirement	Actions / Locations	Sufficient to Address Requirement?
LNAPL Plume B Delineation	LNAPL Plume B will be monitored/delineated by the following locations: • Within the plume: MW03, PW02, MW05, S8, MW154, PC13 • Cross-gradient: MW135_GHD, MW136_GHD, MW6, MW164, MW188[1], PC12 • Down-gradient: MW16, MW126A, MW126B, MW60, MW193[1], S9 Access was not granted to off-Site wells in the inferred up-gradient direction (east) on TasPorts land. Well PC13 on TasPorts land was gauged in February 2025 and had 0.01 m of LNAPL present, and it is considered that LNAPL Plume B extends areas off-Site, and is co-sourced in these areas as the historic bulk fuel storage, the identified likely source of LNAPL, also occurred on this off-Site land. Groundwater wells MW6, MW163,and MW164 are located on the Site boundary with TasPorts, where groundwater is inferred to the entering the Site, and are considered suitable for assessment of groundwater entering the Site.	Yes
Gasworks DNAPL (Tar Plume A, B, C and D) Delineation	Gasworks DNAPL will be monitored/delineated by the following locations: • Up-gradient: MW121, MW128A, MW128B • Cross-gradient: MW198, MW102, MW173 • Down-gradient: MW195, MW196, MW123A, MW123B, MW130_GHD, MW129, RS6, MW133_GHD It is noted that MW121 is not directly upgradient of DNAPL. During previous investigation programs, the area inferred to be directly up-gradient of DNAPL, west of the Site along Davey St / Tasman Highway, has not had any suitable locations for groundwater wells due to subsurface services, established trees, and traffic. DNAPL is also inferred to extend off-Site upgradient to the west into other land within the footprint of historical gasworks operations. MW121 is considered suitable for assessment of background groundwater condition, however, as this location is on the Site boundary upgradient of potential Site sources of impact, and outside and not downgradient of any gasworks uses.	Yes
Areas where further groundwater assessment was identified as required in the Gateway (AECOM, 2025a)	• Locations where validation samples could not be collected, due to dolerite or groundwater intrusion at the base of remediation excavations, in the areas surrounding: - Tar Plume B – MW197, MW100 - Brick Pit 1 – MW196, MW123A, MW123B	Yes

Requirement	Actions / Locations	Sufficient to Address Requirement?
	- Brick Pit 2 - MW195 • Tar Plumes – See Gasworks DNAPL delineation, above. • Groundwater emanating from the Gateway which may pathway for contamination to off-Site receptors – MW123A, MW123B, MW128A, MW128B, MW130_GHD, MW131_GHD, MW132_GHD, MW133_GHD, MW129, RS6	

For temporal adequacy of groundwater monitoring,14 GMEs (including June 2025) have been conducted at the Site and/or on Regatta Point, summarised on **Table 18** below.

Table 18 Site GMEs - 2015 to 2025

#	Sample Dates	Wells Sampled
1	13 to 16 January 2015	BG1, BH1-PS, M3, MW103, MW103, NR3, BH2_PS, RN4, MW23, MW100, RS6, R2, MW36, MW101, MW102, NR2, RN2, MW6, MW13, MW16, MW60, S4, S6, S8, S9, MW55, PW01D, PW01D, PW01S, PW01S, MW103, NR1, R3
2	17 to 20 August 2015	MW126A, MW126B, S9, MW127A, MW127B, MW124A, MW124B, , MW125A, MW125B, MW122, MW129, RS6, MW120, MW123A, MW123B, MW101, BG1, MW121, MW128A, MW128B
3	1 to 3 February 2016	MW130, MW132, MW136, MW138, NR1, MW142, MW125A, MW125B, MW126A, MW126B, S9, MW127A, MW127B, MW129, RS6, MW101, MW128A, MW128B, BG1, MW120, MW121, NR2, MW123A, MW123B, MW131_GHD, MW132_GHD, MW133_GHD, MW124A, MW124B, RN4, MW122
4	18 to 21 July 2016	MW130_GHD, MW132_GHD, S4, MW130, MW147, MW138, MW140, MW144, R2, MW103, NR2, TW03, MW142, R3, MW6, MW16, MW60, MW125A, MW125B, MW126A, MW126B, MW132, MW100, MW129, RN2, MW123A, MW123B, MW131_GHD, MW133_GHD, RN4, MW122, RS6, MW124A, MW124B, MW146, S9, MW127A, MW127B, MW136, MW101, BG1, MW120, MW121, MW145, NR1
5	9 May 2017	MW148, MW149, BH2_PS, MW124A, MW124B, MW127A, MW127B, MW122, MW129, RS6
6	18 to 20 July 2017	MW148, MW149, MW123A, MW123B, MW130_GHD, MW131_GHD, MW132_GHD, MW133_GHD, MW124A, MW124B, MW142, MW146, R3, MW6, MW16, MW60, MW125A, MW125B, MW126A, MW126B, S9, MW130, MW132, MW147, MW127A, MW127B, MW100, MW122, MW129, MW135, MW136, MW144, R2, MW101, MW128A, MW128B, BG1, MW121, MW145, MW103, NR1, NR2, TW03, RN4, S4, RS6, NR4, RN2
7	26 to 28 February 2018	MW16, MW125A, MW125B, MW126A, MW126B, MW127A, MW127B, MW149, MW150, MW151, MW152, MW153, TW03, MW123A, MW123B, MW130_GHD, MW131_GHD, MW132_GHD, MW133_GHD, MW124A, MW124B, S9, MW103, RN2, MW142, MW146, RN4, MW130, RS6, MW135, MW144, BG1, NR2
8	27 to 29 August 2018	MW142, MW146, MW16, MW126A, MW126B, MW150, MW154, MW123A, MW123B, MW130_GHD, MW131_GHD, MW132_GHD, MW133_GHD, S9, MW151, MW152, MW153, MW155, MW156, MW124A, MW124B, RS6, MW162
9	12 to 15 August 2019	MW162, RN4, MW122, BG1, MW159, MW160, MW161, MW150, MW151, MW152, MW153, MW130_GHD, MW131_GHD, MW132_GHD, MW133_GHD, MW36, MW145, NR1, MW154, MW156, MW163, MW164, PW02, TW03, MW123A, MW6, MW13, MW16, MW126A, S4, S9, MW155, MW157, MW158, MW166, MW167, MW171, RS6, RN2
10	11 to 18 November 2019	MW156, MW158, MW162, RN4, RS6, MW36, MW150, MW151, MW152, MW153, MW171, MW123A, MW130_GHD, MW131_GHD, MW132_GHD, MW133_GHD, MW159, MW160, MW161, MW154, MW166, MW167, MW6, MW13, MW16, MW126A, S4, MW157, MW164, TW02, TW03, MW125A, S9, NR2, MW155, MW163, MW122, NR1

#	Sample Dates	Wells Sampled
11	30 November to 2 December 2022	MW174, , MW122, RS6, MW150, MW173, MW130_GHD, MW131_GHD, MW132_GHD, MW133_GHD, MW100, MW102, MW123A, MW123B, MW127A, MW127B, MW36
12	29 November to 6 December 2023	MW146, RN4, MW162, MW175, MW176, MW55, MW127A, MW127B, MW150, MW151, MW152, MW153, MW164, MW125A, MW125B, MW163, MW124A, MW124B, MW60, MW126A, MW126B, S4, MW154, MW155, MW6, MW16, S6
13	25 to 26 September 2024	MW180, MW159, MW160, MW161, MW177, MW178, MW179
14	12 to 25 June 2025	BG1, BH2_PS, MW101, MW102, MW120A, MW121, MW122, MW123A, MW125A, MW126A, MW127A, MW128A, MW130_GHD, MW132_GHD, MW133_GHD, MW148, MW150, MW151, MMW152, MW153, MW155, MW159, MW16, MW160, MW161, MW164, MW167, MW173, MW178, MW179, MW180, MW182, MW183, MW184, MW186, MW188, MW189, MW90, MW191, MW192, MW193, MW194, MW196, MW197, MW198, MW36, MW55, MW6, MW60, NR1, NR3A, RN2, RN4, RS6, TW02

Data from earlier GMEs, dating back to 1996, is also available, however details of the purpose, methodology, and quality checks for earlier events is not readily available, and this data is treated as lower reliability, and may not be relevant to Site condition due to the time which has passed since it was collected.

GMEs have covered a wide range of time periods and seasons on the Site, and are considered suitable to provide information on potential seasonal changes or variations.

7.1.2 Soil Vapour

The soil vapour monitoring well network at the Site consists of:

- 17 soil vapour bores, with implants installed between 1 and 2 m bgl.
- 2 sub-slab pins, installed in the SeaRoad Shed slab in the south-east corner of the Site.

Soil vapour assessment has been conducted where potential vapour intrusion (PVI) risks have been identified based on soil and groundwater investigation at the following key areas:

- LNAPL Plumes A1 and A2, and former LNAPL Plume A3, as well as general bulk fuel storage and railway activities in the central portion of the Site.
- LNAPL Plume B in the south-eastern portion of the Site, as well as historic bulk fuel storage in this area and off-Site to the east.
- Locations where soil investigations indicated potential vapour intrusion (PVI) risks based on soil concentrations.

In addition, previous assessments have also identified soil methane may represent a risk to future construction, and that PVI assessment is required in the Gateway area to assess risks associated with former gasworks operations (AECOM, 2025a).

Soil vapour monitoring points have been compared to the advice on sample locations for future buildings from Table 4 of the *Petroleum hydrocarbon vapour intrusion assessment: Australian Guidance* (CRC CARE, 2013) (**Section 3.1.2**), noting:

- All areas have been assessed as “Big building or size not known”.
- All sources have been considered on-Site.
- Previous PVI assessment has been conducted in some areas, and historic data from lost or destroyed soil vapour monitoring points will be considered in broader assessments

- Locations for soil vapour assessment points have been selected based on previously identified sources of PVI, based on field observations (i.e., presence of LNAPL), and soil and groundwater analytical results.
- The guidance provided in CRC CARE (2013) is specific for petroleum hydrocarbons and does not specifically consider other sources of PVI, such as soil methane or DNAPL. The following has been considered for assessment of these PVI sources:
  - *Contaminated Land Guidelines – Assessment and Management of Hazardous Ground Gases* (EPA NSW, 2020) provides guidance on methane assessment. While not specifying any number of monitoring locations, Table 19 in Appendix 4 of this document does provide general guidance around locating bores in source zones.
  - DNAPL has been treated as soil and dissolved phase, as DNAPL is denser than groundwater and is present either below groundwater (where any vapour emissions must pass through groundwater) or as a soil impact. The more conservative number of required monitoring points has been adopted.

Based on the assessment of soil vapour point numbers, and the targeting of monitoring points to previously identified PVI source areas, the selected monitoring is considered spatially suitable.

Table 19 Assessment of Number of Soil Vapour Monitoring Points

Area	PVI Source	Number of monitoring points	
		Recommended (CRC CARE, 2013)	Actual / Proposed / Historic
Antarctic Facilities Zone	Soil	2 (number of soil sources)	5 – SV18, SV35, SV14[1], SV19[1], SV17[1]
	Dissolved phase	2	
Complementary Integrated Mixed Use Zone	LNAPL Plume B	3	8 – SV07, SV38, SV37, SV29[1], SV05[1], SV06[1], SV08[1], SV30[1]
	Soil	3 (number of soil sources including LNAPL area)	13 – SV46, SV25, SV38, SV37, SV07, SV23[1], SV24[1], SV29[1], SV05[1], SV06[1], SV08[1], SV30[1], SV04[1]
	Dissolved phase	2	
Multipurpose Stadium and Associated Concourse Zone	LNAPL Plume A1	3	5 - SV31, SV20[1], SV21_B[1], SV22[1], SV11[1]
	LNAPL Plume A2	3	4 - SV32, SV27[1], SV28[1], SV12[1]
	Former LNAPL Plume A3	3	SV33, SV13[1], SV16[1], SV15[1], SV11[1]
	Soil	8 (number of soil sources including LNAPL areas)	26 - SV31, SV32, SV33, SV34, SV46, SV36, SV44, SV45, SV18, SV01[1], SV02[1], SV03[1], SV11[1], SV12[1], SV13[1], SV15[1], SV16[1], SV17[1], SV20[1], SV21_B[1], SV22[1], SV23[1], SV24[1], SV26[1], SV27[1], SV28[1]
	Dissolved Phase	2	
The Gateway (Aboriginally Informed Cultural Zone / Multipurpose	DNAPL	4 (treated DNAPL as a soil impact and based on the number of source areas)	6 - SV39, SV40, SV41, SV42, SV43, SV44

Area	PVI Source	Number of monitoring points	
		Recommended (CRC CARE, 2013)	Actual / Proposed / Historic
Stadium and Associated Concourse Zone)	Soil	6 (number of source areas including DNAPL plumes and former brick pits)	7 - SV39, SV40, SV41, SV42, SV43, SV45
	Dissolved Phase	2	

Notes: 1. Lost or destroyed historic monitoring point

It is noted that soil vapour bore SV44, installed immediately adjacent to ISS-treated Tar Plume B, could not be sampled due to water in the implant tubing. Six soil other vapour bores were installed within the former Gateway area, and include locations immediately adjacent to both untreated and treated gasworks DNAPL. It has been assumed for the purpose of future assessment and mitigation requirements that the results for these locations, including locations not within the proposed Multipurpose Stadium footprint, indicate the potential vapour impacts which may be present and have been assessed as such.

Based on the above review, it is considered that the soil vapour monitoring network is spatially adequate to assess and update potential PVI risks. Temporal adequacy of soil vapour data has been considered against MOS criteria in **Section 7.2.3.1**.

7.2 Adopted Tier 1 Assessment Criteria

7.2.1 Soil

The analytical results for soil samples collected and analysed as part of the investigation were compared to the adopted Tier 1 assessment criteria as presented in **Table T5a – T5d** (**Appendix B**). A summary of the soil analytical results which exceeded the adopted Tier 1 assessment criteria are presented in **Table 20** below. **Figures F4a - F4b** (**Appendix A**) show locations where concentrations of CoPC exceeded Tier 1 assessment criteria in soil samples.

Table 20 Soil - Summary of Exceedances of Tier 1 Assessment Criteria

PEV		CoPC	Criteria (mg/kg)	Range of Reported Concentrations (mg/kg)	Number of Exceedances
Human Health Criteria – Direct Contact	Low Density Residential [1]	Chromium	100	<2 – 3,400	1 of 51 primary results
		Lead	300	<5 – 480	1 of 51 primary results
		TRH >C10-C16 fraction	1,700	<50 – 8,400	3 of 51 primary results
		TRH >C16-C34 fraction	1,300	<100 – 21,000	6 of 51 primary results
		TRH >C34-C40 fraction	1,300	<100 – 5,900	1 of 51 primary results
		Benzo(a)pyrene	3	<0.5 – 53	7 of 51 primary results
		Benzo(a)pyrene TEQ calc (Half)	3	<0.5 – 74	10 of 51 primary results
		Benzo(a)pyrene TEQ calc (Zero)	3	<0.5 – 74	9 of 51 primary results
		Benzo(a)pyrene TEQ calc(PQL)	3	<0.5 – 74	10 of 51 primary results
		Sum of PAHs	300	<0.5 – 3,700	4 of 51 primary results
	Medium/ High Density Residential	Chromium	500	<2 – 3,400	1 of 51 primary results
		TRH >C10-C16 fraction	2,200	<50 – 8,400	3 of 51 primary results
		TRH >C16-C34 fraction	1,600	<100 – 21,000	4 of 51 primary results
		TRH >C34-C40 fraction	1,600	<100 – 5,900	1 of 51 primary results
		Benzo(a)pyrene	4	<0.5 – 53	7 of 51 primary results
		Benzo(a)pyrene TEQ calc (Half)	4	<0.5 – 74	7 of 51 primary results
		Benzo(a)pyrene TEQ calc (Zero)	4	<0.5 – 74	7 of 51 primary results
		Benzo(a)pyrene TEQ calc(PQL)	4	<0.5 – 74	7 of 51 primary results
		Sum of PAHs	400	<0.5 – 3,700	2 of 51 primary results
	Recreation / Open Space	Chromium	300	<2 – 3,400	1 of 51 primary results
		TRH >C10-C16 fraction	2,000	<50 – 8,400	3 of 51 primary results
		TRH >C16-C34 fraction	1,500	<100 – 21,000	6 of 51 primary results

PEV		CoPC	Criteria (mg/kg)	Range of Reported Concentrations (mg/kg)	Number of Exceedances
		TRH >C34-C40 fraction	1,500	<100 – 5,900	1 of 51 primary results
		Benzo(a)pyrene	3	<0.5 – 53	7 of 51 primary results
		Benzo(a)pyrene TEQ calc (Half)	3	<0.5 – 74	10 of 51 primary results
		Benzo(a)pyrene TEQ calc (Zero)	3	<0.5 – 74	9 of 51 primary results
		Benzo(a)pyrene TEQ calc(PQL)	3	<0.5 – 74	10 of 51 primary results
		Sum of PAHs	300	<0.5 – 3,700	4 of 51 primary results
	Commercial / Industrial	TRH >C16-C34 fraction	7600	<100 – 21,000	1 of 51 primary results
		Benzo(a)pyrene	40	<0.5 – 53	2 of 51 primary results
	Intrusive Maintenance Worker	Concentrations of CoPC were reported below the adopted assessment criteria.			
Human Health Criteria – Vapour Intrusion [2]	Residential HSLs A and B [1]	TRH >C6-C10 (minus BTEX) (F1)	11.5 (0 – 1m) 19.1 (1 – 2m) 32.4 (2 – 4m) 61.2 (>4m)	<50 – 330	1 of 51 primary results
		TRH >C10-C16 (minus Naphthalene) (F2)	25 (0 – 1m) 55.3 (1 – 2m) 106 (2 – 4m) 211 (>4m)	<50 – 8,400	15 of 51 primary results
		Benzene	0.5	<0.1 – 38	2 of 51 primary results
		Total Xylenes	40 (0 – 1m) 60 (1 – 2m) 95 (2 – 4m) 170 (>4m)	<0.1 – 210	1 of 51 primary results
		Naphthalene	3 (0 – 1m) 9 (1 – 2m) 20 (2 – 4m) 40 (>4m)	<0.5 – 1,900	3 of 51 primary samples

PEV		CoPC	Criteria (mg/kg)	Range of Reported Concentrations (mg/kg)	Number of Exceedances
	Recreational/ Open Space HSL C	Concentrations of CoPC were reported below the adopted assessment criteria.			
	Commercial / Industrial HSL D	TRH >C6-C10 (minus BTEX) (F1)	66.6 (0 -1m) 97.5 (1 - 2m) 177 (2 – 4m) 359 (>4m)	<50 – 330	1 of 55 analytical results
		TRH >C10-C16 (minus Naphthalene) (F2)	137 (0 – 1m) 261 (1 – 2m) 573 (2 – 4m) 1,240 (>4m)	<50 – 8,400	9 of 55 analytical results
		Benzene	3	<0.1 – 38	1 of 51 primary results
		Naphthalene	10 (0 – 1m) 40 (1 – 2m) 100 (2 – 4m) 230 (>4m)	<0.5 – 1,900	3 of 51 primary samples
	Intrusive Maintenance Worker	Concentrations of CoPC were reported below the adopted assessment criteria.			
Ecological Criteria [3]	Modified Ecosystems	Copper	60	<5 – 180	21 of 51 primary results
		Nickel	30	<2 – 100	11 of 51 primary results
		Zinc	70	9.1 – 990	23 of 51 primary results
		TRH >C10-C16 fraction	120	<50 – 9,400	13 of 51 primary results
		TRH >C16-C34 fraction	300	<100 – 21,000	17 of 51 primary results
		TRH >C34-C40 fraction	2,800	<50 – 36,300	1 of 51 primary results
		Total Xylenes	45	<0.3 – 210	2 of 51 primary results
		Naphthalene	170	<0.5 – 1,900	2 of 51 primary results
		Benzo(a)pyrene	0.7	<0.5 – 53	11 of 51 primary results

PEV		CoPC	Criteria (mg/kg)	Range of Reported Concentrations (mg/kg)	Number of Exceedances
	Highly Modified Ecosystems	Copper	85	<5 – 180	6 of 51 primary results
		Nickel	55	<2 – 100	1 of 51 primary results
		Zinc	110	9.1 – 990	18 of 51 primary results
		TRH >C10-C16 fraction	170	<50 – 9,400	12 of 51 primary results
		TRH >C16-C34 fraction	1,700	<100 – 21,000	4 of 51 primary results
		TRH >C34-C40 fraction	3,300	<50 – 36,300	1 of 51 primary results
		Total Xylenes	95	<0.3 – 210	1 of 51 primary results
		Naphthalene	370	<0.5 – 1,900	2 of 51 primary results
		Benzo(a)pyrene	1.4	<0.5 – 53	5 of 51 primary results
Other Criteria	Buildings and Structures	This PEV has been assessed based on groundwater data screening for this PEV (refer to **Section 7.2.2**) and the pH field screening undertaken as part of the PASS assessment (discussed herein). Analysis of sulfate or chloride was not undertaken in these samples as part of the investigation scope. Field pH (pH_F) measured in 61 soil samples collected above the water table from 10 soil bores located within the future building footprints ranged between 7.4 and 9.5 (i.e. neutral to strongly alkaline). A total of 57 of these 61 samples reported a field pH (pH_F) of 8.0 or greater, which is outside the range typically considered suitable for building and structures (pH 5.5 to 8.0).			
	Aesthetics	Anthropogenic materials including brick, concrete, metal, ceramic, wood, slag and glass fragments.	Noted at 31 of 45 drilling locations (refer to **Section 6.1.2**).		
		Olfactory	A hydrocarbon odour was noted at 14 of 45 drilling locations (refer to **Table 14**).		
		Visual	Either green staining, LNAPL sheen, and/or black tar residue was noted at seven of 45 drilling locations (refer to **Table 14**).		
	Traditional Owner Cultural Values	Assessment of PEVs related to ecosystem protection, recreational use and aesthetics are considered to provide an initial screening for this PEV, noting that other considerations beyond CoPC concentrations may apply for this PEV. Aboriginal heritage areas have been identified within the Site boundary.			

Notes: *[1] Low-Density Residential use is not planned for the Macquarie Point, however, soil results have been compared to Low-Density Residential criteria (in addition to other relevant PEVs) for completeness; [2] Vapour intrusion screening criteria are variable with the depth of the sample and are detailed in* ***Table T5c*** *(****Appendix B****); [3] Terrestrial ecological receptors are not present at the Site, however, soil results have been compared to ecosystems criteria for completeness; mg/kg – milligrams/kilogram.*

On the basis of the Tier 1 assessment of soil samples collected during this assessment, the following is noted:

- Concentrations of CoPC, namely; PAHs, TRH, total xylenes, naphthalene, and metals (chromium, copper, lead, nickel and zinc) were reported in soil above the adopted criteria for the following PEVs:
  - Maintenance of Modified and Highly Modified Ecosystems
  - Residential (Low Density and Medium/High Density)
  - Recreation/ Open Space
  - Commercial/ Industrial
- Concentrations of naphthalene, benzene, total xylenes, TRH >C_{10}-C_{16} minus naphthalene (F2) and TRH C_6-C_{10} less BTEX (F1) were reported above the adopted vapour intrusion criteria for Residential and Commercial/ Industrial uses.
- Impacts identified in soils are considered to be associated with a combination of:
  - The presence of gasworks wastes (slag/ coal/ coke/ ash);
  - The importation of impacted fill placed during land reclamation; and
  - Point source contamination from fuel handling and storage activities undertaken within, and adjacent to, the Site (e.g. spills).
- Concentrations of CoPC were reported below the Tier 1 assessment criteria for Intrusive Maintenance Workers.
- The presence of aesthetic impacts including anthropogenic materials, hydrocarbon odours, and staining/LNAPL/tar residues precludes the PEV of Aesthetics.

The SEMP documents mitigations to prevent contact with soil and reduce risks associated with detected Tier 1 exceedances and aesthetic impacts. Potential health risks to future Site users are further assessed via the Site derived RC, discussed in **Section 7.3**. The SEMP also includes maintenance of surface barriers to prevent contact with Site soil, and if these controls are applied and maintained, no exposure pathway from soil impact to ecological receptors (on- or off-Site) is considered to have the potential to be complete.

7.2.2 Groundwater

The analytical results for groundwater samples collected and analysed as part of the investigation were compared to the adopted Tier 1 assessment criteria are presented in **Tables T6a – T6e** (**Appendix B**).

A summary of the groundwater analytical results which exceeded the adopted Tier 1 assessment criteria is presented in **Table 21** below. **Figures F5a – F5c** (**Appendix A**) show locations with CoPC above Tier 1 assessment criteria in groundwater samples.

Table 21 Groundwater - Summary of Exceedances of Tier 1 Assessment Criteria

PEV		CoPC	Criteria (µg/L)[6]	Range of Reported Concentrations[6]	Number of Exceedances[5]
Human Health Criteria – Drinking Water [1]	Health	Cadmium (Filtered)	0.002 mg/L	<0.0001 – 0.012 mg/L	1 of 55 primary results
		Manganese (filtered)	0.5 mg/L	<0.001 – 4 mg/L	33 of 55 primary results
		Cyanide Total	80	<4 – 1,500	11 of 55 primary results
		Nitrate (as N)	11.2 mg/L	<0.02 – 70 mg/L	2 of 55 primary results
		Benzene	1	<1 – 650	6 of 55 primary results
		Ethylbenzene	300	<1 – 390	1 of 55 primary results
		o-Xylene	190	<1 – 280	1 of 55 primary results
		Naphthalene	0.17	<1 – 490	9 of 55 primary results [3]
		Sum of PAHs	0.01	<1 – 560	21 of 55 primary results
		2-Methylphenol (o-Cresol)	930	<1 – 1,700	1 of 55 primary results
		Total Cresols	1,500	<10 – 2,200	1 of 55 primary results
		2,4-Dimethylphenol	360	<1 – 1,100	1 of 55 primary results
		Perfluorooctane sulfonic acid (PFOS)	0.008	<0.001 – 0.3	6 of 10 primary results
		Sum (PFHxS + PFOS)	0.07	0.001 – 0.31	1 of 10 primary results
		Sulfate as SO_4	500 mg/L	<5 – 2,100 mg/L	2 of 55 primary results
	Aesthetics	Total Dissolved Solids	600 mg/L	170 – 28,000 mg/L	45 of 55 primary results
		Toluene	25	<1 – 59	3 of 55 primary results
		Ethylbenzene	3	<1 – 390	2 of 55 primary results
		Total Xylenes	20	<2 – 43	2 of 55 primary results
		Manganese	0.1 mg/L	<0.001 – 4 mg/L	44 of 55 primary results
		Nitrate (as N)	10 mg/L	<0.02 – 70 mg/L	2 of 55 primary results

PEV		CoPC	Criteria (µg/L)[6]	Range of Reported Concentrations[6]	Number of Exceedances[5]
		Chloride	250 mg/L	8.9 – 14,000 mg/L	13 of 55 primary results
		Sodium	180 mg/L	12 – 7,400 mg/L	20 of 55 primary results
		Sulfate as SO_4	250 mg/L	<5 – 2,100 mg/L	8 of 55 primary results
Human Health Criteria – Recreation [1]	Primary [1] and Secondary Contact	Benzene	10	<0.1 – 650	4 of 55 primary results
		Naphthalene	1.7	<1 – 490	9 of 55 primary results
		Sum of PAHs	0.1	<1 – 560	21 of 55 primary results
		Perfluorooctane sulfonic acid (PFOS)	0.08	<0.001 – 0.3	1 of 55 primary results
		Cyanide Total	800	<4 – 1,500	1 of 55 primary results
Human Health Criteria – Vapour Intrusion	Residential HSLs A and B [2]	TRH >C6-C10 (minus BTEX) (F1)	640	<20 – 750	1 of 55 primary results
		TRH >C10-C16 (minus Naphthalene) (F2)	760	<50 – 7,250	3 of 55 primary results
	Recreation / Open Space HSL C	Concentrations of CoPC were reported below the adopted assessment criteria.			
	Commercial / Industrial HSL D	TRH >C10-C16 (minus Naphthalene) (F2)	4,800	<50 – 7,250	1 of 55 primary results
	Intrusive Maintenance Workers	Concentrations of CoPC were reported below the adopted assessment criteria.			
	All uses (potentially explosive vapour intrusion)	Methane	1,600	<50 – 24,000	20 of 55 primary results
Ecological Criteria	Ecosystem Protection (90%)	TRH >C10-C40 fraction (sum)	600	<100 – 9,500	7 of 55 primary results
		TPH >C10-C36 fraction (sum)	600	<50 – 11,400	6 of 55 primary results
		Ethylbenzene	5	<1 – 390	2 of 55 primary results

PEV		CoPC	Criteria (µg/L)[6]	Range of Reported Concentrations[6]	Number of Exceedances[5]
		Total Xylenes	19	<2 – 43	2 of 55 primary results
		Naphthalene	90	<1 – 490	2 of 55 primary results
		Anthracene	0.01	<1 – 15	8 of 55 primary results [3]
		Phenanthrene	0.6	<1 – 29.4	11 of 55 primary results [3]
		Fluoranthene	1	<1 – 5	9 of 55 primary results
		Phenol	520	<1 – 600	1 of 55 primary results
		2-Methylphenol (o-Cresol)	1,020	<1 – 1,700	1 of 55 primary results
		2,4-Dimethylphenol	2	<1 – 1,100	2 of 55 primary results
		Perfluorooctane sulfonic acid (PFOS)	0.13 [4]	<0.001 – 0.3	1 of 10 primary results
		Copper (Filtered)	0.003 mg/L	<0.001 – 0.036 mg/L	12 of 55 primary results
		Manganese (Filtered)	0.08 mg/L	<0.001 – 4 mg/L	46 of 55 primary results
		Zinc (Filtered)	0.023 mg/L	<0.005 – 0.38 mg/L	5 of 55 primary results
		Cyanide (Free)	0.007 mg/L	<0.004 – 0.031 mg/L	3 of 55 primary samples
		Ammonia (as N)	1.2 mg/L	<0.01 – 46 mg/L	27 of 55 primary results
Primary Industries Criteria [1]	Irrigation	Concentrations of CoPC were reported below the adopted assessment criteria.			
	Stock Watering	Cadmium (Filtered)	0.01 mg/L	<0.0001 – 0.012 mg/L	1 of 55 primary results
		Sulfate as SO_4	2,000 mg/L	<5 – 2,100 mg/L	1 of 55 primary results
		Perfluorooctane sulfonic acid (PFOS)	0.07	<0.001 – 0.3	1 of 55 primary results
		Sum (PFHxS + PFOS)	0.07	0.001 – 0.31	1 of 55 primary results
Other Criteria	Buildings and Structures	Chloride	6,000 mg/L	8.9 – 14,000 mg/L	3 of 55 primary results
		Sulfate as SO_4	1,000 mg/L	<5 – 2,100 mg/L	1 of 55 primary results

PEV		CoPC	Criteria (µg/L)[6]	Range of Reported Concentrations[6]	Number of Exceedances[5]
	Aesthetics	A hydrocarbon odour and/or measurable LNAPL / LNAPL sheen was noted in 11 groundwater monitoring wells (refer to **Section 6.3.4**).			
	Traditional Owner Cultural Values	Assessment of PEVs related to ecosystem protection, recreational use and aesthetics are considered to be applicable to this PEV, noting that other considerations beyond CoPC concentrations may apply. Aboriginal heritage areas have been identified within Regatta Point.			
	NAPL solubility limits	Naphthalene	170	<5 – 350	2 of 55 primary results

***Notes**: [1] Although the PEVs of Drinking Water (Health and Aesthetic), Primary Recreation Contact, Irrigation and Stock Watering are considered unlikely to be realised, they have been assessed for completeness; [2] Low-Density Residential use is not planned for the Macquarie Point development area, however, groundwater results have been compared to Low-Density Residential criteria for completeness, noting the CRC CARE (2011) Residential HSLs A and B for vapour intrusion apply to both Low- and High-Density Residential use scenarios. [3] It is noted that the adopted criteria is below the laboratory LOR, therefore exceedances are reported as detectable concentrations above the LOR. [4] PFAS NEMP 3.0 (2025) Interim Marine 95% Species Protection adopted to account for bioaccumulation potential. [5] Filtered and unfiltered groundwater samples collected from the same location at the same time have been considered as only one primary result. [6] All concentrations reported in µg/L unless otherwise stated.*

On the basis of the Tier 1 assessment of groundwater samples collected during this assessment, the following is noted:

- Concentrations of CoPC, namely; PAHs, TRH, BTEXN, total xylenes, naphthalene, and metals (cadmium, copper, manganese, zinc), cyanide, nitrate as N, o-cresol, total cresols, 2,4-dimethylphenol, PFOS, Sum (PFHxS+PFOS), and Sulfate as SO_4 were reported in groundwater above the adopted criteria for the following PEVs:
  - Drinking Water and Aesthetics
  - Recreation (Primary and Secondary Contact)
  - Stock Watering
  - Buildings and Structures
- Concentrations of TRH >C_{10}-C_{16} minus naphthalene (F2) and TRH C_6-C_{10} less BTEX (F1) were reported above the adopted vapour intrusion criteria for Residential and Commercial/ Industrial use. On-Site exceedances of the residential use criteria did not occur in or near areas where residential use is proposed (Regatta Point), however:
  - Exceedances of the Commercial/Industrial vapour intrusion criteria for TRH >C10-C16 (minus naphthalene) in MW197 is further assessed via the RC.
  - Exceedance of the Residential vapour intrusion criteria were reported for TRH >C10-C16 (minus naphthalene) in MW130_GHD, located off-Site and down-gradient on Evans Street towards residential apartments. Historic sampling of this well has reported exceedances of this criteria, however speciation of results has not reported any exceedance of criteria for aromatic or aliphatic congener ranges, and this detection is not considered to indicate a risk to off-Site users on this basis.

- Concentrations of methane in groundwater were detected above the adopted criteria across the central, southern and eastern portions of the Site, and are considered to correlate with locations where saturated natural soil has been buried by land reclamation. While the adopted criteria conservatively assess risk by assuming all dissolved methane may volatilise, the detected methane in soil vapour (discussed in **Section 7.2.3**) corroborates that methane generation may represent a risk to future development. Methane has not been detected in groundwater in the Escarpment, Audit Area 4 East, or Regatta Point, or in any locations upgradient of these areas, and is not considered required unless building or structures with footprints which extend to other parts of these Sites are constructed in these areas.
- The presence of LNAPL, sheen, and odours are considered to preclude Aesthetic PEVs. It is noted that the concentration of naphthalene in MW197, on the southern boundary of the Gateway, and MW130_GHD, located off-Site along Evans Street, exceeded the ASC NEPM solubility limits for LNAPL. No NAPL (LNAPL or DNAPL) was detected in this well when gauging, and MW130_GHD is hydraulically down-gradient of the former gasworks area of the Site, which is considered the likely source of impacts in this well. As such, the pure substance solubility limits from CRC CARE (2011) are considered more appropriate than the ASC NEPM solubility limits, which are derived for fuel hydrocarbon mixtures, for assessment of the presence or absence of NAPL in this well. The detected concentration of naphthalene was below the pure solubility limit, and it is not considered that NAPL is likely to be present in this well.
- Impacts identified in groundwater are considered to be associated with a combination of:
  - Historic industrial activities.
  - The importation of impacted fill placed during land reclamation; and
  - Point source contamination from fuel handling and storage activities undertaken within, and adjacent to, the Site (e.g. spills).
- Concentrations of CoPC were reported below the Tier 1 assessment criteria for Intrusive Maintenance Workers.
- The concentrations of CoPC and potentially precluded PEVs are generally consistent with the previous Site-wide GMEs conducted in August and November 2019 (AECOM, 2020b). PFAS was not considered in the AECOM, 2020b assessment, however reported concentrations from the June 2025 investigation were consistent with previous groundwater assessments conducted between 2015 and 2017 (AECOM, 2016a, 2016c, 2016d and 2018).

The SEMP documents mitigations to prevent extraction of groundwater and reduce risks associated with these exceedances. Potential health risks to future Site users or off-Site users are further assessed via the Site derived RC, discussed in **Section 7.3**.

Risks to off-Site ecological receptors from contaminants in groundwater emanating from the Site have been assessed in AECOM (2020a) and updated in AECOM (2025g), which concluded based on a weight of evidence approach that unacceptable risks were not likely to be present.

7.2.3 Soil Vapour

The analytical results for soil vapour samples collected and analysed as part of the investigation were compared to the adopted Tier 1 assessment criteria as presented in **Table T7a** (**Appendix B**). A summary of the groundwater analytical results which exceeded the adopted Tier 1 assessment criteria is presented in **Table 22** below. **Figure F6** (**Appendix A**) shows locations with CoPC above Tier 1 assessment criteria in soil vapour samples.

Table 22 Soil Vapour - Summary of Exceedances of Tier 1 Assessment Criteria

PEV		CoPC	Criteria (µg/m^3)	Range of Reported Concentrations (µg/m^3)	Number of Exceedances
Human Health Criteria	HSL A/B Residential (Sand) [1]	Benzene	995 (0 – 1m) 2,900 (1 – 2m)	<2.3 – 290,000	2 of 19 primary results
		Naphthalene	778 (0 – 1m) 2,970 (1 – 2m)	<9.9 – 44,000	3 of 19 primary results
		TPH >C8-C10 Aromatic Fraction	46,400 (0 – 1m) 157,000 (1 – 2m)	<94 – 250,000 mg/m^3	1 of 19 primary results
	HSL C Recreational / Open Space (Sand) [1]	Concentrations of CoPC were reported below the adopted assessment criteria.			
	HSL D Commercial / Industrial (Sand) [1]	Benzene	3,720 (0 – 1m) 12,300 (1 – 2m)	<2.3 – 290,000	2 of 19 primary results
		Naphthalene	2,940 (0 – 1m) 12,800 (1 – 2m)	<9.9 – 44,000	1 of 19 primary results
		TPH >C8-C10 Aromatic Fraction	174,000 (0 – 1m) 674,000 (1 – 2m)	<94 – 250,000 mg/m^3	1 of 19 primary results
	Intrusive Maintenance Worker	Concentrations of CoPC were reported below the adopted assessment criteria.			
Action Levels for Subsurface Methane near foundations		Methane	1.25 % v/v	<0.01 – 75.2% v/v	11 of 19 primary results

***Notes**: [1] Fill material at the Site consists of gravels, cobbles and sand, and as such, sand has been conservatively selected as the predominant material type.[2] All units are in µg/m^3 unless otherwise stated throughout the table.*

On the basis of the Tier 1 assessment of soil vapour samples collected during this assessment, the following is noted:

- Concentrations of CoPC, namely; benzene, naphthalene and TRH >C8-C10 aromatic fraction were reported in soil vapour in SV41 and SV43 above the adopted criteria for Residential, Commercial/Industrial, and Intrusive Maintenance Worker uses. Both these soil vapour bores are located in the former gasworks area of the Site (the Gateway), and gasworks wastes in soil or groundwater are inferred to be the source of the exceedances. As not RC have been derived for soil vapour, the exceedance of adopted criteria for Commercial/Industrial uses are considered to indicate that mitigation to prevent vapour intrusion in any future structures which will over these locations is required.

It is noted that SV44, located immediately adjacent to solidified gasworks waste Tar Plume B, could not be sampled due to water within the soil vapour bore. As a conservative measure, it should be assumed that the exceedances reported in other gasworks locations (i.e., SV41 and SV43) be applied to this location as well.

- Methane in soil vapour represents a hazard to future buildings and structures across the Site, and vapour mitigation measures to prevent methane intrusion and explosion hazard (via accumulation in underground spaces) will be required to be documented in the SEMP for future development.
- Results of soil vapour assessment, including detected COPC and concentrations, are generally consistent with previous assessments (AECOM, 2021c).
- The proposed development of the Site includes large continuous structures, such as the Multipurpose Stadium and Associated Concourse, which cover and extend from areas where methane or other potentially hazardous vapours have been detected. The potential exists for vapour to migrate along the base of any such large structures and preferential pathways created by underground services, and as such any requirement for vapour protection must extend to the entirety of any structure which covers areas of potential vapour intrusion.

7.2.3.1 Margin of Safety

Margin of Safety (MOS) is identified in CRC CARE, 2013 as a method to assess a suitable number of soil gas monitoring rounds that is required based on the soil gas concentration relative to the relevant screening level guideline.

7.2.3.1.1 Calculated MOS

MOS is calculated using the methods shown on **Plate 2** (refer to **Section 3.1.2**), while **Plate 3** (refer to **Section 3.1.2**) shows the suggested monitoring frequency based on the calculated MOS.

Calculated MOS for all soil vapour, sub-slab and ambient air samples collected at the Site as part of the investigation are attached as **Table T7b** (**Appendix B**).

A summary of the sample locations where the calculated MOS was less than 10 is provided in **Table 23** below. All other calculated MOS were greater than 10.

The required and actual numbers of monitoring rounds, based on MOS, are discussed in **Section 7.2.3.1.2**.

Table 23 Summary of Margin of Safety (MOS) Outcomes

Sample Location	Date	Sample Depth (m bgl)	Analyte	MOS	No. of Sampling Rounds[1]
HSL A/B – Residential					
SV18	24-Jun-25	2.1	Naphthalene	1.9	2-3
SV35	20-Jun-25	2.5	Aliphatic >C_8-C_{10}	7.6	2-3
SV41	25-Jun-25	1	**Benzene**	**0.01**	**Risk Mitigation**
			Naphthalene	**0.1**	**3-4**
			Aliphatic >C_8-C_{10}	4.9	2-3
			Aromatic >C_8-C_{10}	**0.6**	**3-4**
			Aromatic >C_{10}-C_{12}	4.3	3-4
SV43	27-Jun-25	1.85	**Benzene**	**0.04**	**Risk Mitigation**
			Naphthalene	**0.5**	**3-4**
			Aromatic >C_8-C_{10}	4.8	2-3
HSL C – Recreational / Open Space					
SV41	25-Jun-25	1	Benzene	8.2	2-3
HSL D – Commercial / Industrial					
SV41	25-Jun-25	1	**Benzene**	**0.04**	**Risk Mitigation**
			Naphthalene	**0.3**	**3-4**
			Aromatic >C_8-C_{10}	2.7	2-3
SV43	25-Jun-25	1.85	**Benzene**	**0.2**	**3-4**
			Naphthalene	2.0	2-3
HSL – Intrusive Maintenance Worker					
SV41	25-Jun-25	1	Benzene	2.6	2-3
SV43	27-Jun-25	1.85	Benzene	9.9	2-3
			Benzene	9.9	2-3

Sample Location	Date	Sample Depth (m bgl)	Analyte	MOS	No. of Sampling Rounds[1]
Action Levels Subsurface – Near Foundation					
SV07	23-Jun-25	1	Methane	0.2	3-4
SV18	24-Jun-25	2.1	Methane	0.05	Risk Mitigation
SV25	23-Jun-25	1.6	Methane	0.04	Risk Mitigation
SV31	17-Jun-25	2.5	Methane	0.34	3-4
SV32	18-Jun-25	2.5	Methane	0.12	3-4
SV33	18-Jun-25	2.5	Methane	0.24	3-4
SV34	24-Jun-25	2.5	Methane	0.02	Risk Mitigation
SV35	20-Jun-25	2.5	Methane	0.23	3-4
SV36	18-Jun-25	2.5	Methane	0.54	3-4
SV38	24-Jun-25	0.2	Methane	0.56	3-4
SV46	23-Jun-25	1.45	Methane	0.20	3-4

Notes: *1. Number of sampling rounds required by CRC CARE, 2013. Grey shading with bold text indicates exceedance of adopted assessment criteria.*

7.2.3.1.2 Further Sampling Frequency and Risk Mitigation Requirements

It noted that the soil vapour sampling events detailed in the following reports have occurred at the Site:

- Round 1 – August 2018, documented in AECOM report *Audit Area 3 (SeaRoad Shed) – Soil Vapour and Indoor Air Investigation, 29 March 2019* (AECOM, 2019b).
- Rounds 2 & 3 – August & November 2019, documented AECOM report *Soil Vapour and Indoor Air Investigations 2019, Macquarie Point Development Project, 22 October 2020* (AECOM, 2021c).
- Round 4 – June 2025, as detailed in this report.

Sampling events have been conducted across a range of seasons are generally considered suitable to account for seasonal variation, noting that soil vapour in the former gasworks area (the Gateway) has only been directly sampled in winter.

It is therefore proposed that no further soil vapour sampling be conducted at the Site. The presence and concentrations of methane in soil vapour, and in groundwater as discussed in **Section 7.2.2**, are considered to indicate that risk mitigation is required as part of the future development of the Site and that, while further soil vapour sampling may refine understanding of soil vapour, it will not affect the overall mitigation and management requirements.

In addition, while soil vapour monitoring in summer has not been undertaken in new soil vapour bores installed in June 2025 (consisting of SV31 to SV46), additional monitoring to capture seasonal variation is not proposed as:

- SV31 to SV38, and SV46, were installed to replace lost or destroyed soil vapour bores which were sampled over a range of seasons. As such, further sampling is not considered required at these locations.
- SV39 to SV45, installed in the former gasworks area in the Gateway, have only been sampled in winter (June 2025). Increased vapour concentrations may be present with elevated temperature or any fluctuation in groundwater level, which can expose soil contamination to air, in summer months, and as such any future vapour mitigations for this area will:

- Conservatively allow for any exceedance of adopted criteria to be applied to the area as a whole.
- If concentrations are required as part of the assessment of the effectiveness of a mitigation measure (i.e., a selective permeable barrier or similar), a safety margin of 2x should be applied to reported concentrations to allow for any variation with seasons.
- MOS assessment identified that further sampling rounds would be required to determine the reliability of results for benzene in this area for intrusive maintenance workers. If further monitoring is not conducted, air monitoring for benzene should be included as a requirement for intrusive works in this area.

7.3 Site Derived Remediation Criteria

Soil and groundwater analytical results have been compared to Site derived RC to inform potential remediation and/or management works required at the Site for the protection of human health as described in **Section 3.3**.

7.3.1 Soil

The analytical results for soil samples collected and analysed as part of the investigation were compared to the Site Derived RC for soil as presented in **Table T5d** (**Appendix B**). A summary of the soil analytical results which exceeded the Site Derived RC are presented **Table 24** below**. Figure F4d** (**Appendix A**) shows the locations where CoPC were reported above the Site Derived RC in soil samples.

Table 24 Soil - Summary of Exceedances of Site Derived Remediation Criteria

Future Use	CoPC	Criteria (mg/kg)	Range of Reported Concentrations (mg/kg)	Number of Exceedances
Potential Future Commercial Light Industrial Workers (low-rise slab-on-grade)	Benzene	3	<0.1 – 38	1 of 51 primary results
	Naphthalene	160	<0.5 – 1,900	2 of 51 primary results
Potential Future Comm/Light Ind Workers (working within a basement)	>C6-C10 (minus BTEX) (F1)	130	<10 – 330	1 of 51 primary results
	>C10-C16 (minus Naphthalene) (F2)	770	<50 – 8,400	4 of 51 primary results
	Benzene	3	<0.1 – 38	1 of 51 primary results
	Naphthalene	97	<0.5 – 1,900	2 of 51 primary results

The following is noted with regards to exceedances of the RC in soil:

- Residential use is not proposed for any of the areas where soil samples were collected as part of this assessment, and exceedance of the Residential use RC are not considered to indicate any requirements for remediation.
- Exceedances of the Commercial/Industrial RC were detected for benzene, naphthalene, TRH >C6-C10 (minus BTEX) and TRH >C10-C16 (minus naphthalene). The RC for these CoPC have been adopted to be protective of potential vapour generated from soil, and are assessed as follows:
  - TRH >C10-C16 (minus naphthalene) exceedances were reported in soil from MW183, MW184, MW185 and SV32, located in the vicinity of known or former LNAPL at the Site (discussed in **Section 7.5**). Direct sampling of soil vapour conducted as part of this event (**Section 6.3**) in SV31 (adjacent to MW183) and SV32 (adjacent to MW185) did not report any concentrations indicating potential risks to commercial/industrial uses, which was consistent with historic soil vapour assessment in this area (AECOM, 2021c), and no further remediation or mitigations are considered required.
  - TRH >C6-C10 (minus BTEX), TRH >C10-C16 (minus naphthalene), benzene, and/or naphthalene exceedances were reported in soil from MW196, MW198, SV43, and SV44, located in the former gasworks area of the Site (the Gateway). No potentially hazardous vapours were detected during direct sampling of soil vapour from SV45, located immediately adjacent to MW198 (**Section 6.3**), and it is not considered that the soil results at MW198 indicate a risk to future development or any requirement for remediation or mitigations.

    Direct soil vapour samples from SV43 (which is in the vicinity of MW196) detected concentrations of benzene and naphthalene above adopted criteria, however, and soil vapour could not be sampled from SV44 due to water in the line. As protection and mitigation of vapour intrusion is considered required for any future development of the Site due to other impacts (methane), it is considered that this protection should also be designed and installed to address potential BTEXN and TRH intrusion.
- No exceedances of RC for open space land use, or for future intrusive maintenance workers, was detected in any soil samples collected.

7.3.2 Groundwater

The analytical results for groundwater samples collected and analysed as part of the investigation were compared to the Site Derived RC for groundwater are presented in **Table T6d** (**Appendix B**).

No exceedances of the Site derived RC were detected in groundwater during sampling in June 2025, and no requirement for groundwater remediation is considered identified as a result.

7.4 Acid Sulfate Soil

The results of ASS sampling, based on the TASSMG guidance discussed in **Section 3.4**, of pH field screen tests conducted on 81 soil samples, collected in June 2025 adjacent to and surrounding previous ASS investigation bores ABH-004 and BH-004, are presented on **Table T8** in the **Tables** section.

These results has been further assessed, and interpreted in the context of PASS at the Site as a whole, in the latest version of the *Acid Sulfate Soil Investigation* (AECOM, 2025h).

7.5 LNAPL Presence and Mobility

7.5.1 LNAPL Presence

As mentioned earlier in field observations **Section 6.2.4**, measurable LNAPL was observed in LNAPL Plume B wells MW03, PW02, and S8. It is noted that measurable LNAPL (5 mm) was briefly observed in MW185 prior to development, however only a sheen was noted in this well throughout the remainder of the June 2025 investigation.

Groundwater wells and soil vapour wells delineating and/or assessing LNAPL and former LNAPL plumes are listed on **Table 25** and **Table 26** below, with a summary of LNAPL observations and sampling status at each location

Table 25 LNAPL Plume Groundwater Assessment Wells

Well ID	Purpose	LNAPL Observations)	Groundwater Sampled?
MW36	Delineate LNAPL Plume A2 to the west	None	Yes
MW146	Delineate LNAPL Plume A2 to the east	None	No
MW155	Delineate Former LNAPL Plume A3 to the east	None	Yes
MW176	Delineate LNAPL Plume A2 to the south-east	None	No
MW177	Delineate LNAPL Plume A1 to the east / Former LNAPL Plume A3 to the north-east	None	No
MW182	Delineate LNAPL Plume A1 to the north-east	None	Yes
MW183	Target LNAPL Plume A1 location	Hydrocarbon odour and green staining in soil. Yellow LNAPL noted in groundwater when the well was developed, and sheen and/or hydrocarbon odour noted during development and sampling.	Yes
MW184	Delineate LNAPL Plume A1 to the south / LNAPL Plume A2 to the north	“Egg” odour noted during development.	Yes
MW185	Target LNAPL Plume A2 location	Hydrocarbon odour in soil and noted during development. Sheen present when sampling attempted.	No
MW186	Delineate LNAPL Plume A2 to the south	Hydrocarbon odour and LNAPL sheen in soil, and noted during development. No odour/sheen during sampling.	Yes
MW187	Target Former LNAPL Plume A3 location	Hydrocarbon odour and sheen during development.	No
MW190	Delineate LNAPL Plume A1 to the north-east	Hydrocarbon odour and green staining in soil.	Yes
MW191	Delineate LNAPL Plume A1 to the west / LNAPL Plume A2 to the north-west	None	Yes
MW6	Delineate LNAPL Plume B to the north	None	Yes
MW03	Intersect LNAPL Plume B	70 mm of LNAPL present during gauging.	No
MW05	Delineate LNAPL Plume B to the south-east	None	No
MW126A	Delineate LNAPL Plume B to the south.	None	Yes
MW154	Delineate LNAPL Plume B to the south.	None	No

Well ID	Purpose	LNAPL Observations)	Groundwater Sampled?
MW16	Delineate LNAPL Plume B to the south	None	Yes
MW188	Delineate LNAPL Plume B to the west	Organic odour and green staining in soil	Yes
MW193	Delineate LNAPL Plume B to the south-west	None	Yes
MW60	Delineate LNAPL Plume B to the south.	None	Yes
PW02	Intersect LNAPL Plume B	42 mm of LNAPL present during gauging	No
S8	Intersect LNAPL Plume B	81 mm of LNAPL present during gauging.	No

Table 26 LNAPL Plume Soil Vapour Assessment Bores

Soil Vapour Bore ID	LNAPL Plume
SV31	LNAPL Plume A1
SV32	LNAPL Plume A2
SV33	Former LNAPL Plume A3
SV07	LNAPL Plume B
SV37	LNAPL Plume B
SV38	North of LNAPL Plume B (previous extent prior to remediation)

The following is noted from observations of LNAPL presence or indicators in the vicinity of the former LNAPL plumes:

- Measurable LNAPL was detected only in groundwater wells MW3 (70 mm), PW02 (42 mm) and S8 (81 mm), each within LNAPL Plume B, when initially gauged on 16 June 2025. When these wells were returned to for LNAPL transmissivity testing on 20 and 26 June, however, detectable thickness had decreased to 20 mm in MW3 and PW03, and 62 mm in S8.
- No measurable LNAPL was detected in wells in the vicinity of LNAPL Plumes A1 or A2, or former LNAPL Plume A3.
- LNAPL sheen and/or hydrocarbon odours were noted on soil during installation of MW186, and hydrocarbon odours and/or staining were noted during installation of MW183, MW185, MW190, and SV31.
- LNAPL sheen was observed in MW185 (targeting LNAPL Plume A2) and MW187 (targeting Former LNAPL Plume A3), and LNAPL was noted in groundwater removed from MW185 during development on 13 June 2025. However, no measurable LNAPL was present in these wells up to three weeks following installation.
- No LNAPL was observed in well MW183, which was targeting the historic location of LNAPL Plume A1, or in the wells installed to delineate the former extent of this LNAPL Plume (MW177, MW182, MW184, MW190 and MW191).
- No soil vapour concentrations of TRH or BTEXN which would indicate a potentially unacceptable risk to future Site uses were detected in soil vapour wells near LNAPL plumes. Methane concentrations in bores was above the adopted criteria, and may be contributed to by degradation of LNAPL.

  However, based on widespread groundwater concentrations of dissolved methane and detections of methane in excess of adopted criteria in locations which are not in the vicinity of LNAPL plumes, it is considered that the anerobic breakdown of other materials in soil, most likely organic matter in

former river- and seabed covered by land reclamation, is the primary source of methane in the Site soil.

7.5.2 LNAPL Transmissivity Testing

Where measurable LNAPL was observed (MW3, PW02 and S8), LNAPL transmissivity testing was conducted as part of this investigation. LNAPL transmissivity testing field data is attached in **Appendix I** and are summarised in **Table 27** below.

Table 27 LNAPL Transmissivity Test Outcomes

Well ID	Initial LNAPL Thickness at Start of Test (mm)	Volume LNAPL Removed (mL)	LNAPL Thickness Rebound % after 24 hours	Calculated LNAPL Transmissivity (m^2/day) [1]	Inferred Mobility Based on Rebound after 24 Hours
MW3	20	50	0%	N/A	Unlikely to be mobile
PW02	20	85	100%	N/A	Potential to be mobile
S8	62	250	<32% [2]	N/A	Unlikely to be mobile

***Notes**: 1. Although LNAPL thicknesses were insufficient to conduct LNAPL transmissivity testing with reasonable confidence (<0.15m), transmissivity rate calculations were attempted for indicative purposes. 2. LNAPL thickness was not able to be measured 24 hours from test commencement due to Site closure, however the final LNAPL thickness was measured 6 days later. This thickness was 32% of the initial thickness, therefore it is inferred that LNAPL thickness at 24 hours was less than 32%. N/A: LNAPL recovery was too low over the first 24 hours to calculate an LNAPL transmissivity value using the API (2012) transmissivity workbook.*

To provide additional assessment of potential LNAPL inflow from the aquifer, the volume of LNAPL in each well prior to removal was calculated using the following equations:

$$V_{Well} = \frac{T_{LNAPL}}{1000} \times \pi \left(\frac{d_{well}}{2}\right)^2$$

Equation 1 LNAPL in Well

$$V_{Bore} = \frac{T_{LNAPL}}{1000} \times \pi S_y \left(\left(\frac{d_{bore}}{2}\right)^2 - \left(\frac{d_{well}}{2}\right)^2\right)$$

Equation 2 LNAPL in Bore

$$V_{LNAPL} = \frac{T_{LNAPL}}{1000} \times \pi \left(\left(\frac{d_{well}}{2}\right)^2 + S_y \left(\left(\frac{d_{bore}}{2}\right)^2 - \left(\frac{d_{well}}{2}\right)^2\right)\right)$$

Equation 3 LNAPL in Well and in Bore

Where:

V_{Well} Volume of LNAPL in the well (L)

V_{Bore} Volume of LNAPL in bedding sand in the bore around the well casing (L)

V_{LNAPL} Volume of LNAPL in the well and bedding sand (L)

T_{LNAPL} Initial thickness of LNAPL in the well (prior to removal) (m)

d_{well} Diameter of the well (m)

d_{bore} Diameter of the bore the well was installed in (m)

S_y Specific yield of LNAPL the material in the bore surrounding the well casing (dimensionless). A value of 0.175 was assumed for bedding sand (API, 2012).

Table 28, below, presents the volume removed and calculated volume present prior to transmissivity testing for each bore.

Table 28 LNAPL Removed vs Initial LNAPL Present

Well	T_{LNAPL} (m)	Diameter (m)		LNAPL Volume (L)			
	D_{well}	D_{well}	D_{bore}	V_{well}	V_{bore}	V_{LNAPL}	Extracted
MW3	0.020	0.050	0.150	0.04	0.02	0.06	0.050
PW02	0.020	0.075	0.203[1]	0.09	0.10	0.19	0.085
S8	0.062	0.050	0.150[2]	0.12	0.06	0.18	0.050

Notes: *1. PW02 has a recorded bore volume of 8". 2. The bore diameter of S8 is not recorded on the available log sheet from installation in 2014. A radius of 0.150 m has been assumed as a typical value for a 50mm diameter well.*

The following has been assessed regarding LNAPL transmissivity:

- As discussed earlier in **Section 3.5**, insufficient LNAPL thickness (i.e. <0.15m) was observed to conduct reliable bail-down testing, therefore a qualitative assessment of rebound over 24 hours was conducted on MW3, PW02 and S8. However, for completeness, LNAPL rebound was recorded at regular intervals sufficient to attempt calculation of an LNAPL transmissivity rate. However, calculations could not be conducted due to the low recharge and overall thickness in each well.
- No LNAPL was detectable in MW3 in the first hour following removal. While 6 mm of LNAPL was detected in the well 3.5 hours after initial extraction, and 12 mm was detected after 5.5 hours, no LNAPL was detected the following day, 24 hour after the test was conducted. Further recovery is not considered to be practicable on this basis.
- In S8, LNAPL was not detectable in the well 2 hours from the commencement of the test, which is the final available data point in the initial 24-hour test period. This well was not accessible for 6 days following removal due to Site tenant activities for the DarkMOFO festival, but when next accessible 32% of the initial thickness had returned to the well.

  Mobile LNAPL would typically rebound to measurable thickness within the first two hours of a bail-down test, and the volume removed from S8 in the initial test was insufficient to remove LNAPL from bedding sand in the casing around the well. Based on these factors, it is considered that the observed rebound was LNAPL in the casing entering the well, and not indicative of any rebound from the formation. The lack of observed rebound in the first two hours, and low level of rebound compared to initial thickness, would indicate a very low rate of LNAPL recharge to this well and that further LNAPL extraction is not practicable.
- 50% of the initial LNAPL thickness returned to PW02 within 30 minutes of extraction, and 100% within 24 hours. However, the volume removed during the test only represented the available volume in the well (V_{well}), and would not have included residual LNAPL in bedding sand or drawn from the surrounding aquifer. While some recharge from the formation appears to have occurred in the 24 hours following extraction, it is considered that the low LNAPL thickness in PW02, and low recharge in downgradient wells MW3 and S8, indicate that it is unlikely to be sustained or indicate LNAPL in this well is practicable to remediation or mobile on the aquifer.

Overall, based on the results of LNAPL gauging and removal, further active remediation of MW3, PW02, and S8 is considered unlikely to be practicable.

7.5.3 Review of LNAPL Remediation End-Points

The status of the LNAPL remediation end-points (**Section 3.5.1)**, provided in the LNAPL RAP (AECOM, 2017) were previously assessed in *Assessment of LNAPL End-Points* (AECOM, 2021b) as met and that further remediation of LNAPL was not practicable or likely to meaningfully affect the status and longevity of LNAPL plumes or the environmental risks associated with them.

A review and refresh of the data regarding LNAPL presence and mobility, and assessment of any new or updated data collected since the previous assessment of the practicability of LNAPL remediation, has been undertaken as:

- Approximately five years had passed since the last direct data collection for LNAPL Plumes A1 and A2, and Former LNAPL Plume A3, and since that time additional soil excavation and remediation

has been undertaken at the Site, including removal of surface cover and hydrocarbon impacted soil above each plume.

- At LNAPL Plume B:
  - LNAPL thicknesses exceeding previously observed maximums were detected in two wells (PW02 and S8) in December 2023. LNAPL transmissivity testing of these wells concluded that LNAPL did not recharge into these wells at sufficient rate for remediation to be practicable, and that LNAPL was not likely to be mobile (AECOM, 2024).
  - In February 2025 (AECOM, 2025c), LNAPL was detected for the first time in MW154, south of the historic extent of LNAPL Plume B.

Inspection of the groundwater well and soil vapour bore network at the Site in February 2025 identified that many monitoring locations previously used for LNAPL assessment were lost, destroyed, or otherwise unsuitable for future investigations (AECOM, 2025c). New groundwater and soil vapour wells (as listed on **Table 17** in **Section 7.1**) have been installed as part of the field activities discussed in this report to provide additional monitoring of LNAPL wells.

Figure 2 and **Figure 3**, below, show the current and historic groundwater wells near LNAPL plumes for reference. The LNAPL remediation end-points are reviewed in **Section 7.5.3.1 to 7.5.3.4** below.

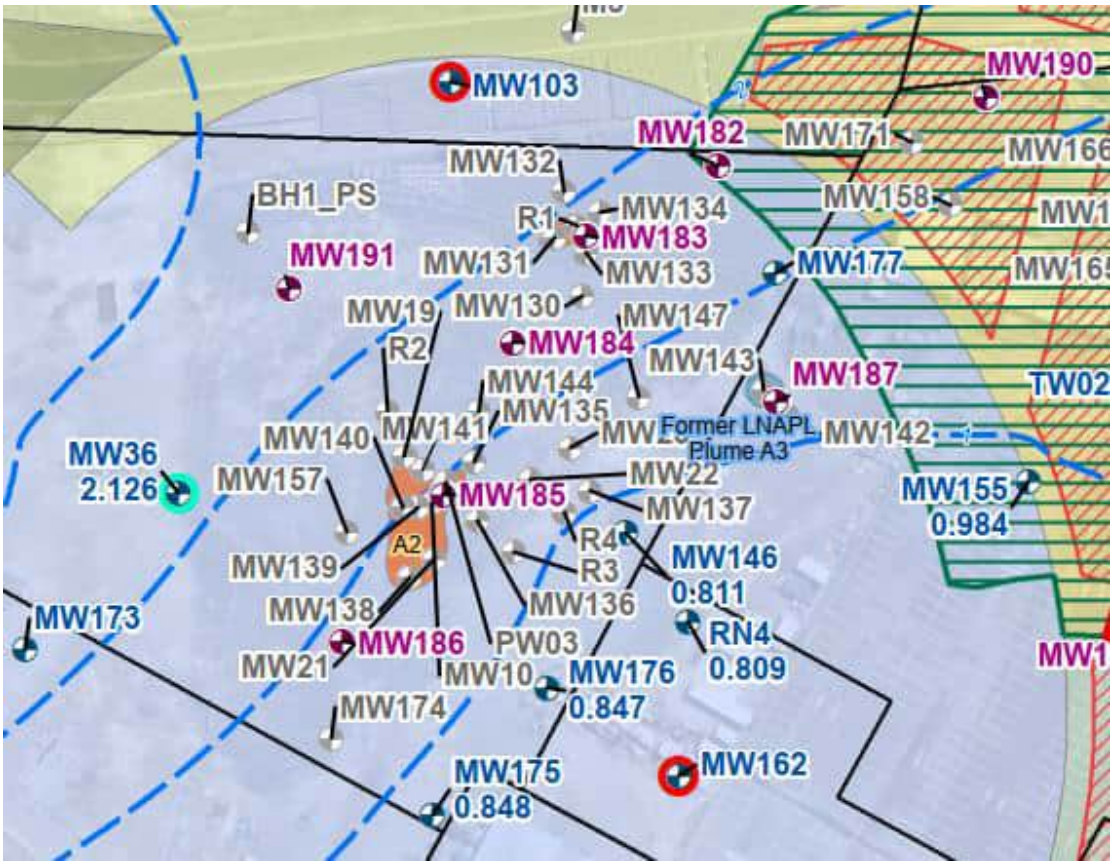

Figure 2 LNAPL Plumes A1, A2 and Former LNAPL Plume A3 – Current and Former Monitoring Wells

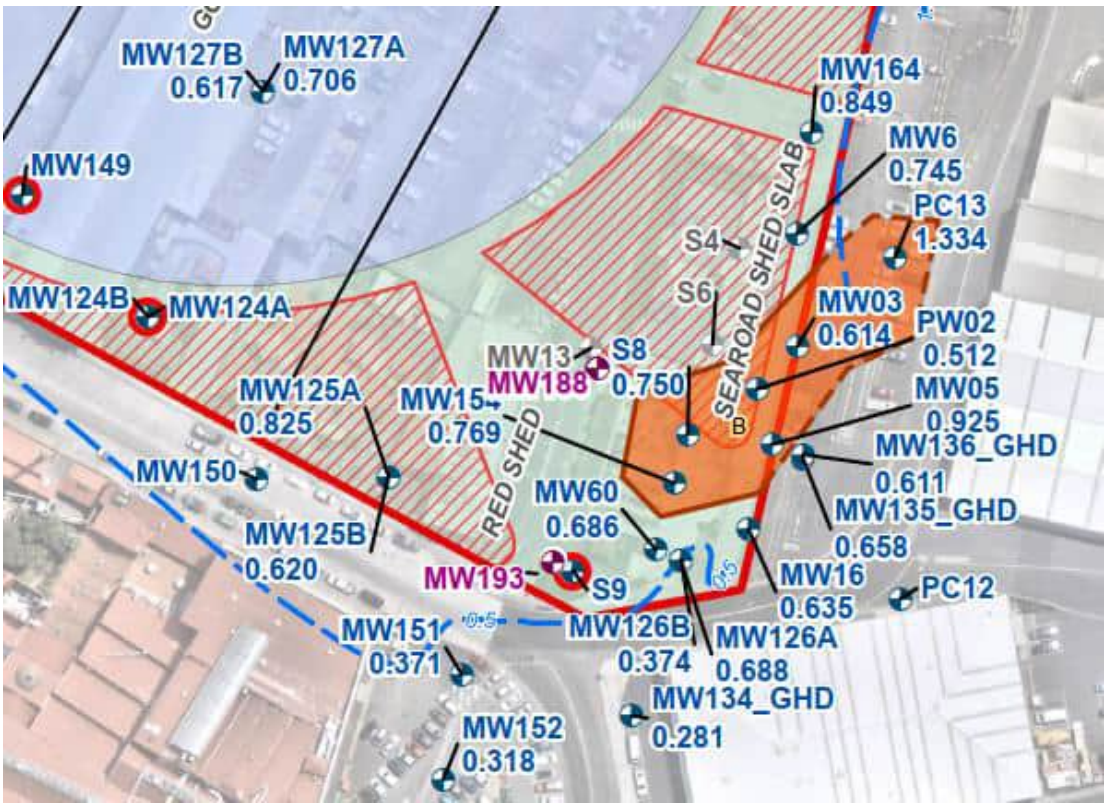

Figure 3 LNAPL Plumes B – Current and Former Monitoring Wells

7.5.3.1 Remediation End-Point 1

LNAPL recovery rates have reached asymptotic levels, and demonstrate marginal recovery rates, such as less than 5% of initial recovery volumes. Further recoverability of residual LNAPL is demonstrated to be impractical within the constraints of the adopted technology, reasonable timeframes and with consideration of the net environmental benefit.

The *Review of LNAPL End-Points* (AECOM, 2021b) concluded that asymptotic and marginal LNAPL recovery rates had been achieved by the previous remediation efforts, and that further LNAPL recovery was not practicable within the constraints of the adopted technology, reasonable timeframes and with consideration of the net environmental benefit.

While no LNAPL recovery has been undertaken at the Site since 2017, it is considered that this conclusion is still valid as:

- LNAPL is no longer detectable in LNAPL Plumes A1 and A2, or Former LNAPL Plume B, or in surrounding wells. Concentrations of TRH and BTEXN in the vicinity of former LNAPL areas, or elsewhere on the Site, are below the saturation limits for petroleum compounds in groundwater provided in the ASC NEPM, and do not indicate that free-phase LNAPL is likely to be present on groundwater in large quantities in the vicinity of the LNAPL plumes, although indicators of some presence in soil and groundwater (such as sheen and odours) were noted.
- LNAPL thickness in LNAPL Plume B wells is low and transmissivity testing conducted in March 2024 (AECOM, 2024a) and as part of this assessment (**Section 7.5.2**) indicated that recovery via hydraulic or pneumatic methods is not likely to achieve effective and practicable recovery rates.
- LNAPL recovery by pneumatic or hydraulic methods is not considered practicable at the Site LNAPL Plumes as:
    - TFE was assessed as reaching the limits of practicability in AECOM (2021b). Detectable LNAPL extent and thicknesses are consistent or have decreased since that assessment and

are considered to indicate that LNAPL recovery rates are likely to be lower than when TFE ceased in 2017.

- LNAPL transmissivity rates are indicative that, based on review of historic system operations, further remediation via pneumatic or hydraulic techniques would be inefficient, will take long periods to marginally affect LNAPL transmissivity, and will have little benefit in terms of reduction of LNAPL mass, migration potential, or longevity of the plume (ITRC, 2009).
- Removal of LNAPL via vapour recovery is unlikely to be practicable or affect residual plume extent or characteristics. Vapour recovery typically assists in remediation by stripping volatile constituents and leaving low solubility and volatility LNAPL in the ground.

  The inferred source of LNAPL in all plumes is diesel, which typically has a lower overall proportion of volatile components, and as LNAPL impacts to groundwater are inferred to have occurred >20 years ago (>50 years for LNAPL Plume B), it is considered that the majority of volatile components which could have been removed has occurred naturally. Fingerprinting of LNAPL (AECOM, 2021b), which indicated weathered diesel, and relatively low TRH in soil vapour concentrations (see **Section 7.2.3**) in the vicinity of the LNAPL plumes support this assessment.

- Alternative methods for LNAPL removal considered in the LNAPL RAP (AECOM, 2017) and reviewed in AECOM (2021b) included excavation of LNAPL plumes, and *in situ* chemical oxidation (ISCO).
  - Excavation of LNAPL impacted material was considered impracticable as it would introduce additional health and safety risks associated with excavation below the water table, and was unlikely to restore any PEVs associated with groundwater as other CoPC, which are not derived from LNAPL, would preclude those uses.

    Excavation is considered to remain impractical for the reasons above. In addition, PASS has been detected in saturated soil on the Site. The TASSMG (DPIPWE, 2009) directs that disturbance of PASS should be minimised where possible, and while some disturbance of PASS is included in future development plans, disturbance of PASS via excavation to remove LNAPL would not restore PEVs.
  - ISCO is not suitable for the removal of LNAPL, and would be ineffective where LNAPL remains on groundwater at LNAPL Plume B. While ISCO could potentially be considered as a polishing technique for LNAPL Plumes A1 and A2, and Former LNAPL Plume A3, soil, groundwater, and soil vapour concentrations do not indicate unacceptable risk to future Site users from this area, ISCO is unlikely to produce any meaningful change in the conditions of the Site. ISCO can also increase some vapour concentrations in the short to medium term, as residual NAPL and TRH is oxidised, and may increase potential risks to future development.

Based on the available and historic data, it is considered that LNAPL Remediation End-Point 1 is still met, and that further LNAPL recovery is not practicable.

7.5.3.2 Remediation End-Point 2

The residual LNAPL plume is shown to be stable or decreasing, including demonstration that LNAPL is not observed in wells where LNAPL has historically been absent.

In June 2025, LNAPL was not detectable by oil/water interface probe in any well in the vicinity of LNAPL Plumes A1 and A2, or former LNAPL Plume A3, although LNAPL indicators such as sheen and odours were recorded. LNAPL Plume B was detected by LNAPL of between 20 and 81 mm thickness when gauged initially and prior to baildown testing.

While LNAPL Plume A1 (in well R1) and LNAPL Plume A2 (in wells MW19, MW22, MW23, MW135, MW138 and MW140) were detectable in 2019, the extents were considered stable and decreasing, with inconsistent fluctuations in LNAPL thickness observed in post-remediation gauging (especially with regards to LNAPL Plume A2). Former LNAPL Plume A3 was last detected in July 2017, when 0.009 m of LNAPL was observed in MW143.

The absence of detectable LNAPL in A1, A2 and A3 is considered likely to be due to a range of causes, including:

- Soil excavation and removal as part of remediation in this area in 2020 (AECOM, 2021a), which included the removal of surface cover (bitumen) and hydrocarbon impacted soil in the vicinity of these plumes. The removal of hydrocarbon impacted soil would have included a source of LNAPL to the plumes, from residual contamination in soil.
- The removal of the bitumen surface covering may have also allowed increased access by surface water (rain) to the LNAPL plumes and increased the rate of dilution into groundwater. It is not considered that the plumes as a whole are likely to have migrated, as:
    - Groundwater concentrations across the Site were screened against the saturated solubility limits for petroleum hydrocarbons from the ASC NEPM, and the pure substance solubility limits from CRC CARE (2011) on **Table T6e**. No exceedances of either criteria were detected in any wells sampled, which included wells delineating the plumes and down-hydraulic gradient.
    - Hydraulic groundwater gradients and flow direction are consistent with observations in 2019, during the last Site-wide gauging event. The surface of groundwater remains relatively flat and unlikely to induce significant groundwater flow across the centre of the Site, where LNAPL Plumes A1, A2, and A3 have been historical detected, and removal of surface coverage has not introduced any steep hydraulic gradients which would lead to LNAPL plume migrations.
- While the volume of LNAPL released to form these plumes, or present prior to remediation, has not been calculated, the low recoverability (as demonstrated by the completion of practicable TFE extraction and calculated LNAPL transmissivity following remediation) and lack of any detected confining or perching conditions in the fill lithology of the aquifer would indicate that the bulk of LNAPL is likely to have been removed, and only limited residual amounts remained.

As the previous wells which delineated these plumes have been lost or destroyed, Mann-Kendall trend analysis cannot be conducted to assess concentration changes in downgradient wells which could assess plume stability. However, based on the lack of observable LNAPL, and the concentrations of BTEXN and TPH well below ASC NEPM solubility limits, it is considered that all three plumes (A1, A2, and A3) are no longer present on the Site and are likely to have dissipated, although some trace LNAPL may remain in soil and groundwater in the vicinity.

LNAPL Plume B remains present within the Site boundaries and is undelineated off-Site to the east, onto TasPorts land. As discussed in **Section 7.5.2**, LNAPL in wells within LNAPL Plume B is considered to be stable, unpracticable to further remediation, and unlikely to be migrating, based on LNAPL transmissivity testing conducted in June 2025. However, there have been two observations since AECOM (2021b) was issued which warrant further discussion:

- In December LNAPL thicknesses exceeding previously observed pre-remediation maximums were detected in two wells (PW02 and S8) in December 2023. LNAPL was also observed in MW03 and MW05 in the same gauging event, below pre-remediation thickness.

  However, repeat gauging and LNAPL transmissivity testing of these wells in March 2024 concluded that:

    - Limited LNAPL recharge occurred in any of the wells where LNAPL was detected and bailed in 2024 (S8, PW02 and MW05). LNAPL detected in MW03 in December 2023 was not present in March 2024.
    - LNAPL transmissivity could not be calculated for MW5, and was considered to indicate poor recoverability. The LNAPL transmissivity rates calculated for PW02 (0.002 to 0.020 m^2/day) and S8 (0.0004 to 0.009 m^2/day) indicated future LNAPL removal was not likely to be effective in remediation of the area.
    - The fluctuations in LNAPL thickness, including values greater than the reported historical ranges, were considered to have potentially been induced by nearby excavation and were not considered to indicate migration of LNAPL Plume B.

In June 2025, LNAPL was detected in PW02, S8, and MW5, but was not present in MW3. The assessment of recoverability (**Section 7.5.2**) indicated that LNAPL recoverability continued to be unlikely to be practicable.

- In February 2025 (AECOM, 2025c), 0.031 m of LNAPL was detected for the first time in MW154, approximately 10 m south and hydraulically downgradient of well S8, which currently and historically contains LNAPL associated with LNAPL Plume B.

  LNAPL was not detected when MW154 was revisited in June 2025, although globules were noted on the probe while gauging. While this well was not sampled, hydraulically down- or cross-gradient wells MW16, MW60, MW126A, and MW193 were sampled. From assessment of these results:

  - LNAPL or dissolved BTEXN was not detected in any of the four cross or down-gradient wells. No TRH was detected in MW60 (south and down-gradient) or MW193 (cross-gradient).
    - No TRH or BTEX has been detected in MW60 in five recorded sampling events since 2015.
    - MW193 was installed in June 2025 and has only had one sampling event.
  - TRH was detected at low concentrations in MW16 and MW126A. However, Mann-Kendall trend analysis of TRH concentrations in these wells using available historic data (dating back to 2015 and attached in **Appendix J**) indicated that:
    - TRH C6-10 (excluding BTEX) has not been detected above LOR in MW126A, while trends for TRH >C10-C16 (excluding naphthalene) and overall TRH >C10-C40 are stable.
    - No trends could be assessed for TRH C6-C10 (excluding BTEX) or for TRH >C10-C16 (excluding naphthalene) in MW126A. Concentrations of TRH >C10-C40 are stable.

  Based on the above data, it is considered that the observed LNAPL in MW154 in February 2025 does not indicate potential migration of LNAPL Plume B, as LNAPL observed was limited in thickness and did not persist in the well, LNAPL upgradient is not considered to be mobile (see **Section 7.5.2**) and no increasing TRH concentration trends have been observed hydraulically down-gradient.

Based on the above, it is considered that LNAPL Plume B remains stable and unlikely to migrate. While some fluctuations in LNAPL thickness have occurred since issue of AECOM (2021b), remediation work (including excavation of soil to the water table) occurred to the west of the plume in 2023 and may have introduced localised groundwater movement with LNAPL. It is considered that these do not indicate any long term migration of the plume.

The current and previously assessed status of each of these plumes is summarised on **Table 29** below.

Based on the available and historic data, it is considered that LNAPL Remediation End-Point 2 is still met, and that residual LNAPL plumes are stable and decreasing, and unlikely to migrate.

Table 29 Summary of LNAPL Plume Stability

Plume ID	Description and Status	
	November 2019 (AECOM, 2021b)	June 2025
LNAPL Plume A1	LNAPL was detectable in one well only (0.043m in R1), and the plume was considered delineated by MW131 to MW134.	The previous groundwater wells used to assess this plume were lost/destroyed by soil work between 2019 and 2025. A replacement well to assess the plume (MW183) and delineation wells MW177, MW182, MW184, MW187, MW191 and MW103A have been installed since 2019. No LNAPL was detected in any wells within or surrounding the former extent of LNAPL Plume A1, although yellow LNAPL was noted during development of MW183 but did not return when the well was sampled. No groundwater concentrations indicative of LNAPL presence were detected in sampling in June 2025. As such, this LNAPL plume may be dissipated and no longer present on the Site.
LNAPL Plume A2	Since the operation of TFE commenced in LNAPL Plume A2, the extent of the plume has varied, however, overall the extent of the plume has decreased. The occurrence of LNAPL at MW10, MW21, MW22, MW23, MW135, MW138, MW139, and PW03, has been inconsistent overtime. In November 2019, the plume was delineated by MW57 MW137, MW144, MW146, R2 and R3. Plume A2 was previously delineated to the south by MW21 and MW138. However, during gauging in November 2019, 0.017 m of LNAPL was detected in MW138 for the first time since the system shutdown. The presence of LNAPL in this well was inconsistent during previous gauging events. While the southern extent of the plume at MW138 was not fully delineated during the last monitoring round, given the inconsistent presence of LNAPL at this location, associated with temporal variations within the heterogeneous fill and a low thickness of LNAPL detected within the well, it is considered unlikely that the plume would extend past the plume extent inferred in 2019	The majority of the previous groundwater wells used to assess this plume were lost/destroyed by soil work between 2019 and 2025. A replacement well to assess the plume (MW185) and delineation wells MW36, MW146, MW176, MW184, MW186, MW187, and MW1191 remain present or have been installed since 2019. No LNAPL was detected in any wells within or surrounding the former extent of LNAPL Plume A2, and no groundwater concentrations indicative of LNAPL presence were detected in sampling in June 2025. As such, this LNAPL plume may be dissipated and no longer present on the Site.

Plume ID	Description and Status	
	November 2019 (AECOM, 2021b)	June 2025
LNAPL Plume A3	LNAPL has not been measured at either MW142 or MW143 since July 2017. Therefore, it is considered that LNAPL Plume A3 is stable.	The previous groundwater wells used to assess this plume were lost/destroyed by soil work between 2019 and 2025. A replacement well to assess the plume (MW187) and delineation wells MW146, MW155, and MW184, remain present or have been installed since 2019. No LNAPL was detected in any wells within or surrounding the former extent of LNAPL Plume A3, and no groundwater concentrations indicative of LNAPL presence were detected in sampling in June 2025. As such, this LNAPL plume is considered dissipated and no longer present on the Site.
LNAPL Plume B	The plume appears to have remained stable since August 2018 and has reduced in size since the pre-TFE measurements. The plume is delineated by S6, S8, MW6, MW16, MW135_GHD and MW154. The inferred source of LNAPL Plume B, historic bulk fuel terminals, was located both within the Site boundary and in the TasPorts Site adjacent, and potential exists for LNAPL impacts have occurred in the TasPorts area from this historical use. Limited access has been granted by TasPorts to the Corporation to off-Site wells MW135_GHD and PC13 for gauging works only and LNAPL has not been present. Further LNAPL delineation in the TasPorts area has not been possible, and assessment of the stability and practicability of further remediation of LNAPL Plume B on the Site has been conducted with respect to the available data. LNAPL impacts within TasPorts land are considered the responsibility of TasPorts to assess and manage.	The plume has remained stable, with some minor fluctuations of thin LNAPL at the edges, since November 2019, and is delineated north by MW6 and MW164, east by MW188, and south by MW16, MW60, MW126A, MW126B, and MW193. LNAPL on-Site is limited to wells MW03, MW05, S8 and PW02, with intermittent and unsustained LNAPL observed in MW154. However, the detected LNAPL has low thickness and, where able to be measured, low LNAPL transmissivity has been below the level where remediation is considered practicable, and is not considered to represent a risk of migration Limited access has been granted to wells on TasPorts land to the east. LNAPL (0.010 m thick) was detected in PC13 in TasPorts land in February 2025 when access was granted to gauge and inspect wells, and is considered to indicate LNAPL sourced from historic use of the off-Site area and to be TasPort's responsibility to assess and manage. TasPorts was informed of the detection via email following the gauging event.

7.5.3.3 Remediation End-Point 3

No unacceptable risks to current and future human-health or environmental receptors based on the proposed future land uses.

No unacceptable risk to human health or environmental receptors were considered present from LNAPL in the assessment completed in AECOM,2021b.

It is noted that the SEMP contains controls for future Site development to prevent direct contact of future Site users with soil. Risks from impacted soil via vapour intrusion are considered by assessment of soil vapour which is addressed separately.

Based on review of the data collected since the AECOM, 2021b report:

- Groundwater risks
  - The presence of LNAPL or residual LNAPL on groundwater represents a potentially unacceptable risk to human health and ecology if disturbed or handled in the future. The SEMP contains documentation of the location of LNAPL, and controls/restrictions for future work in these areas.

    While LNAPL Plume B extends off-Site to the east, onto TasPorts land, based on the historical use of this area as fuel and oil storage, on both sides of the property boundary, it is considered that LNAPL in this area is co-sourced from TasPorts land and management and remediation of LNAPL is the responsibility of TasPorts. TasPorts has been informed of the presence of LNAPL.
  - All PEVs for groundwater are considered precluded by the presence of LNAPL. Controls and restrictions for contact with groundwater during future development are documented in the SEMP and will be applied to future Site activities and management.
  - Concentrations of methane in groundwater in the vicinity of the LNAPL plumes have been detected in excess of the adopted criteria, and may indicate a potentially unacceptable risk of methane intrusion into buildings and structures. However, methane in groundwater is widespread across the Site, and while the potential exists for a portion of methane to be sourced from anaerobic degradation of LNAPL, it is also considered likely to relate to former sea- and river-bed covered during historic land reclamation.

    The SEMP currently contains a requirement for vapour protection to be installed in buildings and structures for some areas, and will be updated to include this requirement for all areas where potentially hazardous methane concentrations are present beneath buildings and structures.
  - Concentrations of LNAPL related CoPC (TRH, BTEXN, and metals) in groundwater surrounding and down-gradient of LNAPL plumes were below the Site Specific RC for all uses (see **Figure F4d** and **Table T6d**) and residual LNAPL in Plumes A1, A2, and A3, and LNAPL in Plume B, are not considered to represent a risk to on- or off-Site human receptors if the controls inherent to the RC and documented in the SEMP are applied.
  - AECOM (2020a) and AECOM (2025g) concluded that groundwater emanating from the Site boundary, and hence emanating from the LNAPL plume, is unlikely to pose an unacceptable risk to off-Site aquatic ecological receptors at Sullivans Cove and the River Derwent.
- Soil vapour risks:
  - Based on analytical data from soil vapour wells over and adjacent to LNAPL plumes, or the former location of LNAPL plumes, no potentially unacceptable risks associated with soil vapour for TPH or BTEXN have been detected.
  - Concentrations of methane in soil vapour have been detected in soil vapour wells above or adjacent to LNAPL plumes. As discussed above for groundwater, methane is not considered to arise from LNAPL alone, and the SEMP will be updated with a requirement that vapour intrusion and explosive hazard mitigation be included in all structures proposed over areas of potential methane intrusion.

Based on the assessment above and the assumption that the SEMP is accordingly updated and implemented, LNAPL does not represent an unacceptable risk to human health or ecological receptors, and it is considered that LNAPL Remediation End-Point 3 is still met.

It is noted that additional assessment to update the evaluation of potential risks to off-Site ecological receptors is underway, and if a potentially unacceptable risk from LNAPL is identified, this conclusion may require reassessment.

7.5.3.4 Overall Assessment of End-Points

Based on the assessment above, the three remediation end-points for LNAPL are met and it is considered that:

- Further LNAPL remediation is not practicable and is unlikely to materially change the extent, risks, or longevity of LNAPL on Site groundwater.
- LNAPL plumes are stable and unlikely to migrate.
- With the controls and requirements documented in the SEMP, LNAPL does not represent an unacceptable risk to human or ecological receptors, noting that update and review of the evaluation of potential risks to off-Site ecological receptors is currently being undertaken.

As such, it is considered that no further remediation of LNAPL is required. The locations of LNAPL, and controls and mitigations, currently documented in the SEMP should be maintained to allow management without unacceptable levels of risk during future Site operation and management.

8.0 Conclusions and Recommendations

8.1 Work Completed

The scope of work completed is summarised as follows:

- A Site inspection was conducted to confirm the condition and accessibility of the existing groundwater monitoring well network and the proposed drilling locations.
- Underground service location and clearance was completed for all proposed drilling locations, including review of available Site plans and Before You Dig Australia (BYDA) plans, and engagement of a qualified underground service locator.
- A total of 45 drilling locations were advanced using a sonic core drill rig, including:
  - 19 Groundwater Monitoring Wells (MW103A, MW120A, MW182, MW183, MW184, MW185, MW186, MW187, MW188, MW189, MW190, MW191, MW192, MW193, MW194, MW196, MW197, MW198 and NR2A).
  - 16 soil vapour monitoring points, including 14 soil vapour bores (SV31, SV32, SV33, SV34, SV35, SV36, SV39, SV40, SV41, SV42, SV43, SV44, SV45 and SV46) and two sub-slab soil vapour monitoring pins (SV37 and SV38).
  - 10 soil bores for the assessment of PASS (BH-004A, BH-004N, BH-004S, BH-004E, BH-004W, ABH-004A, ABH-004N, ABH-004S, ABH-004E, and ABH-004W).
- Repair and/or recovery of 25 pre-existing groundwater monitoring wells, including:
  - Missing/damaged bolt replacement at BG1, BH2_PS, MW122, MW129, MW131_GHD – MW133_GHD, MW148, MW150, MW155 and MW163.
  - Damaged gatic replacement at SV18, MW102, MW121, MW130_GHD (lid & bolt replacement only) and MW36.
  - Clearing of overlying surface material (gravel/asphalt) and installation of new gatic at RN2, TW02 and MW177.
  - Clearing down-well obstructions at MW128A and re-development of MW128A and MW128B to clear potential further debris from the base of each well following recent building demolition activity.
  - Facilitating the removal of heavy items blocking access to underlying wells (MW124A & B, MW149 and MW162)
- Development of 21 groundwater monitoring wells, including the 19 newly installed groundwater wells and two pre-existing wells (MW128A and MW128B) following removal of a down-well obstruction / sedimentation at the base of each well
- Gauging of groundwater level at 87 groundwater monitoring wells, including 19 new and 68 pre-existing groundwater monitoring wells.
- Purging and sampling of 56 groundwater monitoring wells using peristaltic pump low-flow sampling methods, including the 19 newly installed groundwater monitoring wells and 37 selected pre-existing wells.
- Surveying of 19 newly installed groundwater monitoring wells and three repaired groundwater monitoring wells due to a change in top of casing (MW128A, MW128B and TW02).
- Collection of soil vapour samples using Summa Canisters from 18 locations (SV07, SV18, SV25, SV31, SV32, SV33, SV34, SV35, SV36, SV37, SV38, SV39, SV40, SV41, SV42, SV43, SV45 and SV46).
- LNAPL transmissivity testing at three groundwater monitoring wells (MW03, PW02 and S8).

The scope of work was undertaken in accordance with the *Soil, Groundwater and Soil Vapour Investigation 2025 Sampling and Analysis Quality Plan* (AECOM, 2025d), except as noted in **Section 5.0**.

8.2 Conclusions

8.2.1 Protected Environmental Values

On the basis of soil, groundwater and soil vapour analytical results for CoPC, **Table 30** below provides a summary of the conclusions made with reference to the Tier 1 assessment undertaken against identified PEVs.

It is noted that on the basis of the range of TDS concentrations in shallow groundwater for the dataset considered at and surrounding the Site, groundwater has been conservatively considered to be representative of Category A in accordance with the SPoWQM.

Table 30 Protected Environmental Values - Tier 1 Assessment Summary

Applicable PEVs [1]	PEV Precluded? [2]	Comment
Soil		
Maintenance of Modified and Highly Modified Ecosystems	Yes	Concentrations of a combination of metals (copper, chromium, nickel, zinc), TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction, total xylenes, naphthalene and benzo(a)pyrene were reported above the adopted Tier 1 assessment criteria for both Modified and Highly Modified Ecosystems.
Human Health – Direct Contact – Low Density Residential	Yes	Concentrations of a combination of metals (chromium, lead), TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction and PAHs (benzo(a)pyrene, Sum of PAHs) were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Medium/ High Density Residential	Yes	Concentrations of a combination of chromium, TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction and PAHs (benzo(a)pyrene, Sum of PAHs), were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Recreation / Open Space	Yes	Concentrations of a combination of chromium, TRH >C10-C16 fraction, TRH >C16-C34 fraction, TRH C34-C40 fraction and PAHs (benzo(a)pyrene, Sum of PAHs) were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Commercial / Industrial	Yes	Concentrations of a combination of TRH >C16-C34 fraction and benzo(a)pyrene were reported above the adopted Tier 1 assessment criteria.
Human Health – Direct Contact – Intrusive Maintenance Workers	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from soil) – Residential	Yes	Concentrations of TRH C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene, total xylenes and naphthalene were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from soil) – Recreational/ Open Space	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.

Applicable PEVs [1]	PEV Precluded? [2]	Comment
Human Health – Vapour Intrusion (from soil) – Commercial / Industrial	Yes	Concentrations of TRH C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene, and naphthalene were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from soil) – Intrusive Maintenance Workers	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Buildings and structures	Yes	Field pH (pH_F) measured as part of the PASS assessment was reported above the adopted Tier 1 assessment criteria.
Aesthetics	Yes	Anthropogenic materials (including brick, concrete, metal, ceramic, wood, slag and glass fragments), hydrocarbon odours and/or staining (green staining, LNAPL sheen and/or tar residue) were observed.
Traditional Owner Cultural Values	Yes	Precluded PEVs related to ecosystem protection, recreational use and aesthetics are also considered to preclude Traditional Owner cultural values.
Groundwater		
Ecosystem Protection (Marine)	Yes	Concentrations of a combination of metals (copper, manganese, zinc), PFOS, cyanide, ammonia, TRH >C10-C40 fraction (sum), TPH >C10-C36 fraction (sum), ethylbenzene, total xylenes, PAHs (naphthalene, anthracene, phenanthrene), phenols (phenol, 2-Methylphenol (o-Cresol), 2,4-Dimethylphenol) were reported above the adopted Tier 1 assessment criteria. It is noted that risks to offsite ecological receptors will be assessed and reported in a separate report.
Human Health – Drinking Water	Yes	Concentrations of a combination of metals (cadmium, manganese), PFAS (PFOS, sum of PFHxS + PFOS) cyanide, nitrate, benzene, ethylbenzene, o-xylene, PAHs (naphthalene, sum of PAHs), phenols (2-Methylphenol (o-Cresol), Total Cresols, 2,4-Dimethylphenol, and sulphate as SO4 were reported above the adopted Tier 1 assessment criteria.
Human Health – Recreation (Secondary Contact)	Yes	Concentrations of benzene, naphthalene, sum of PAHs, PFOS and cyanide total were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) – Residential	Yes	Concentrations of TRH >C6-C10 (minus BTEX) (F1) and TRH >C10-C16 (minus naphthalene) (F2) were reported above the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) – Recreation / Open Space	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) – Commercial / Industrial	Yes	Concentrations of TRH >C10-C16 (minus naphthalene) (F2) were reported above the adopted Tier 1 assessment criteria.

Applicable PEVs [1]	PEV Precluded? [2]	Comment
Human Health – Vapour Intrusion (from groundwater) – Intrusive Maintenance Workers	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Human Health – Vapour Intrusion (from groundwater) - Explosive Hazard	Yes	Concentrations of methane were reported above the adopted Tier 1 assessment criteria.
Primary Industries Criteria – Irrigation	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Primary Industries Criteria – Stock Watering	Yes	Concentrations of cadmium, sulfate as SO4, PFOS, and sum of PFHxS + PFOS were reported above the adopted Tier 1 assessment criteria.
Buildings and structures	Yes	Concentrations of a chloride and sulfate were reported above the adopted Tier 1 assessment criteria.
Aesthetics	Yes	A hydrocarbon odour and/or measurable LNAPL / LNAPL sheen was noted.
Traditional Owner Cultural Values	Yes	Precluded PEVs related to ecosystem protection, recreational use and aesthetics are also considered to preclude Traditional Owner cultural values.
Soil Vapour		
Human Health – Residential (Sand)	Yes	Concentrations of benzene, naphthalene and TPH >C8-C10 aromatic fraction were reported above the adopted Tier 1 assessment criteria.
Human Health – Recreational / Open Space (Sand)	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Human Health – Commercial / Industrial (Sand)	Yes	Concentrations of benzene, naphthalene and TPH >C8-C10 aromatic fraction were reported above the adopted Tier 1 assessment criteria.
Human Health - Intrusive Maintenance Worker	No	Concentrations of CoPC were reported below the adopted Tier 1 assessment criteria.
Safety Action Levels for Subsurface Methane Near Foundations	Yes	Concentrations of methane were reported above the adopted Tier 1 assessment criteria.

Notes: 1 – PEVs applicable to the Site and adjacent area based on the potential future land use planned for the Macquarie Point development and consideration of current and potential future receptors; 2 – PEVs precluded based on concentrations of CoPC being reported above Tier 1 assessment criteria for soil and groundwater, or other observed features (i.e., anthropogenic materials in soil).

Given some soil and groundwater PEVs are considered as potentially precluded due to concentrations of CoPC being reported above Tier 1 assessment criteria, further assessment has been conducted against Site Derived RC has been undertaken (refer **Section 7.2.2**), to inform potential measures recommended for the protection of human health.

No RC have been adopted for soil vapour, and exceedances of the adopted criteria in this media have been used to inform mitigation/management requirements. Based on detected vapour concentrations, mitigation or management is considered required for:

- Commercial / Industrial development of the Site – benzene, naphthalene, and TPH >C8-C10 aromatic fraction.

- Potential explosive methane intrusion – all areas excluding the Escarpment, Audit Area 4 East, and Regatta Point. If any building or structure with a footprint extending to other areas is proposed in these areas however (i.e., the Multipurpose Stadium), methane mitigation will be required to be extended to these areas.

Assessment of potential off-Site risks to aquatic ecological receptors will be undertaken as a separate report.

8.2.2 Site Specific Remediation Criteria

On the basis of soil and groundwater analytical results, **Table 31** below provides a summary of the screening against Site Derived RC to inform potential assessment, remediation or management measures required at the Site.

Table 31 Site Specific Remediation Criteria – Summary

Future Use Scenarios [1]	Further Assessment or Remediation Required? [2]	Comment
Soil		
Potential Future Residents (building with a basement car park)	No	TRH >C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene, total xylenes and naphthalene were reported above the Site Derived RC in soil samples collected from 13 locations as part of this investigation. Given each of these are outside the proposed future residential building footprints, which are limited to Regatta Point to the north of the Site, detected exceedances are not considered to present an unacceptable vapour intrusion risk to future development.
Potential Future Residents (low-rise slab-on-grade)	No	
Potential Future Residents (slab-on-grade with unknown construction or multi-storey building)	No	
Potential Future Recreational Open Space Users	No	Concentrations of CoPC were reported below the Site Derived RC.
Potential Future Commercial/Light Industrial Workers (working within a basement)	No (Mitigation / Management Required)	A combination of TRH >C6-C10 (minus BTEX) (F1), TRH >C10-C16 (minus Naphthalene) (F2), benzene and naphthalene were reported above the Site Derived RC at seven locations: • Four locations associated with LNAPL Plumes A1 and A2 (SV32, MW183, MW184, and MW185) • Four locations within the former gasworks area of the Site (MW196, MW198, SV43 and SV44). While exceedances of these RC criteria near LNAPL are not considered to indicate a risk of vapour intrusion, based on direct sampling of soil vapour in the vicinity, the reported exceedances of benzene and naphthalene in soil in the former gasworks area are considered to represent a potential vapour intrusion risk and will require mitigation as part of future development.
Potential Future Commercial/Light Industrial Workers (low-rise slab-on-grade)		
Potential Future Commercial (slab-on-grade with unknown construction or multi-storey building)		
Potential Future Maintenance Workers	No	Concentrations of CoPC were reported below the Site Derived RC.

Future Use Scenarios [1]	Further Assessment or Remediation Required? [2]	Comment
Groundwater		
Potential Future Residents (slab-on-grade with unknown construction or multi-storey building)	No	Concentrations of CoPC were reported below the Site Derived RC.
Potential Future Residents (building with a basement car park)	No	
Potential Future Residents (low-rise slab-on-grade)	No	
Potential Future Recreational Open Space Users	No	
Potential Future Commercial/Light Industrial Workers (working within a basement)	No	
Potential Future Commercial/Light Industrial Workers (low-rise slab-on-grade)	No	
Potential Future Commercial Workers (slab-on-grade with unknown construction or multi-storey building)	No	
Potential Future Maintenance Workers	No	

Notes: 1 – Future use scenarios applicable to Macquarie Point and the surrounding area based on the potential future land use planned and consideration of current and potential future receptors; 2 – Based on concentrations of CoPC being reported above the Site Derived RC for soil and groundwater.

While no remediation of soil or groundwater is considered required for future development, mitigation to prevent potential vapour intrusion by TRH, benzene and naphthalene is considered required for any buildings and structures which include former gasworks areas within their footprint.

8.2.3 LNAPL Impacts and Remediation End-Points

Measurable LNAPL was observed in LNAPL Plume B wells MW03, PW02, and S8. It is noted that measurable LNAPL (5 mm) was briefly observed in MW185 prior to development, however only a sheen was noted in this well throughout the remainder of the June 2025 investigation.

Field observations and mobility testing indicate that LNAPL plumes A1, A2, A3 and B are considered to be very low in mobility, however at least one further round of groundwater monitoring and LNAPL mobility testing is considered required to provide additional temporal data on LNAPL plume presence and mobility following the recent earthworks across the Site.

The status of the LNAPL remediation end-points provided in the LNAPL RAP (AECOM, 2017) were previously assessed as met in AECOM (2021b). Further review of these endpoints based on the results of the June 2025 investigation, indicated that the three remediation end-points for LNAPL remediation continue to be met, and it is further considered that:

- Further LNAPL remediation is not practicable and is unlikely to materially change the extent, risks, or longevity of LNAPL on Site groundwater.
- LNAPL plumes are stable and unlikely to migrate.

- With the controls and requirements documented in the SEMP, LNAPL does not represent a risk to human or ecological receptors, noting that update and review of the evaluation of risks to off-Site ecological receptors is currently being undertaken.

As such, it is considered that no further remediation of LNAPL is required. The locations of LNAPL, and controls and mitigations, currently documented in the SEMP should be maintained to allow management without unacceptable levels of risk during future Site operation and management.

8.2.4 Acid Sulfate Soil

Results of ASS sampling in soil were assessed and are reported separately in *Acid Sulfate Soil Investigations* (AECOM, 2025h).

8.3 Recommendations

8.3.1 Further Assessment and Remediation

Based on the results of the June 2025 investigation, it is considered that further soil, groundwater or soil vapour assessment and remediation at the Site would not likely change the risk to on-Site and off-Site receptors following implementation of risk mitigation measures into future development design and construction at the Site. Therefore, there is no recommendation for further assessment or remediation on this basis.

The data collected in this investigation should be considered in any other assessments of the Site, where relevant, and incorporated into the next review and update of the SEMP (AECOM, 2024b).

8.3.2 Management Measures

Management measures recommended at the Site are below:

- Development of the Site should be restricted to the land uses considered in this investigation. Proposed development for each use should be limited to the areas delineated on **Figure F1**.
- The Site management measures used to derive the RC and documented in the SEMP should be maintained for future development.
- Management and mitigations measures for potential vapour intrusion are considered required for future development for:
    - Methane above criteria in groundwater and soil vapour in the southern and eastern portions of the Site. Methane mitigation is not considered required in Regatta Point, the Escarpment, or Audit Area 4 East, with the exception of structures (such as the proposed stadium) which include areas of elevated methane in their footprint.
    - Benzene, naphthalene, and TRH in the former gasworks area (the Gateway), and any buildings or structures which include this area in their footprint.
    - Air monitoring for benzene should be undertaken for any intrusive maintenance works in the former gasworks area, if further monitoring is not undertaken to confirm results.

Limitations

AECOM Australia Pty Limited (AECOM) has prepared this report in accordance with the usual care and thoroughness of the consulting profession for the use of the Macquarie Point Development Corporation, and only those third parties who have been authorised in writing by AECOM to rely on this Report.

It is based on generally accepted practices and standards at the time it was prepared. No other warranty, expressed or implied, is made as to the professional advice included in this Report.

It is prepared in accordance with the scope of work and for the purpose outlined in the contracts *Macquarie Point Development Project – Site Suitability Update and Data Gaps Investigation*, dated 18 September 2024.

Where this Report indicates that information has been provided to AECOM by third parties, AECOM has made no independent verification of this information except as expressly stated in the Report. AECOM assumes no liability for any inaccuracies in or omissions to that information.

This Report was prepared between October 2024 and June 2025 and is based on the conditions encountered and information reviewed and referenced in the Report at the time of preparation. AECOM disclaims responsibility for any changes that may have occurred after this time.

This Report should be read in full. No responsibility is accepted for use of any part of this report in any other context or for any other purpose or by third parties. This Report does not purport to give legal advice. Legal advice can only be given by qualified legal practitioners.

Except as required by law, no third party may use or rely on this Report unless otherwise agreed by AECOM in writing. Where such agreement is provided, AECOM will provide a letter of reliance to the agreed third party in the form required by AECOM.

To the extent permitted by law, AECOM expressly disclaims and excludes liability for any loss, damage, cost or expenses suffered by any third party relating to or resulting from the use of, or reliance on, any information contained in this Report. AECOM does not admit that any action, liability or claim may exist or be available to any third party.

Except as specifically stated in this section, AECOM does not authorise the use of this Report by any third party.

It is the responsibility of third parties to independently make inquiries or seek advice in relation to their particular requirements and proposed use of the Site.

Notes:

m bgl - metres below ground level
TOC - top of casing
AHD - Australian Height Datum
SWL - Standing Water Level
GC - Good condition
NO - No odour
HC - Hydrocarbon
LEL - Lower explosive limit
H20 - Water
NS - no sheen
NAPL - non-aqueous phase liquid

[1] *The Easting and Northing coordinates presented are the MGA94 Coordinates*

[2] *SWL values in wells containing LNAPL have been corrected for the depression of the LNAPL/water interface in the well by multiplying the apparent LNAPL thickness in the well an LNAPL specific gravity of 0.76*

Table T2 - Groundwater Field Water Quality Parameters

Area	Well ID	Date Sampled	Easting[1]	Northing[1]	Stabilised Water Quality Parameters							Comments

Notes:

EC - Electrical Conductivity (milliSiemens per centimetre)

TDS calculated by multiplying electrical conductivity by 0.65

ORP - Oxidation Reduction Potential (milliVolts)

Redox potential converted from Ag/AgCl electrode to Standard Hydrogen Electrode (SHE) electrode by adding +200 mV

[1] *The Easting and Northing coordinates presented are the MGA94 Coordinates*

1 - Average shroud PID is converted to an isopropanol concentration (ppm) using a response correction factor of 4.6, specific to the 10.6 eV MiniRae 3000 PID used in the field (SIAFA Tech Note TN-106). This value is further coverted from ppm to µg/m3 for isopropanol, assuming a sample temperature of 25 °C at 1 atmosphere.
2 - The relative percent is based on the isopropanol concentration in the primary sample as a percentage of the representative shroud isopropanol concentration reported in the QC600 (SV42_SHROUD) shroud canister sample (2,600,000 µg/m3). It is noted that the corresponding PID-based average shroud isopropanol concentration calculation is approximately 50% lower at this sample location (SV42), indicating a low bias in the PID-based shroud isopropanol concentration calculations.

20,000 Isopropanol concentration was reported below the laboratory LOR. The LOR was therefore adopted for the purpose of the leak test calculations.

Comments
#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Comments
#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Comments
#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Comments
#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Comments
#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Comments
#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Comments
#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.
